

Morning Review

Dear Friends, good morning to all!

Exciting News: The reservation process for the highly anticipated Ai4.0 internal testing plan has exceeded all expectations. We are thrilled to announce measures to ensure all interested participants can join this free testing plan while maintaining effective risk control:

1. Phased Testing Approach

The internal testing plan will be conducted in two phases. The first phase will take place over the weekend, and the second phase will commence next week.

2. Free Testing Throughout

This testing phase is entirely free, sponsored by our partner organizations. Participants will not bear any risk, and all profits generated will belong to the participants.

3. Allocation of Slots and Preparation for Learning

To ensure robust risk control and exemplary demonstration, the first phase will include 1,000 participants. Those who do not make it into the initial phase should actively prepare for the next testing opportunity.

4. Fair and Just Selection

In line with the principles of prioritizing active learners and supporters of the Institute's token, the initial 1,000 participants will be randomly selected using an artificial intelligence lottery system. The remaining participants will enter the second phase of testing.

5. Testing Markets and Targets

The internal testing plan will focus on the cryptocurrency market, specifically targeting crypto contracts. Detailed explanations will be provided later.

6. Key Steps

To be eligible for the lottery, participants must have the

application from our strategic partner in the cryptocurrency trading center. Therefore, those who have reserved a spot should complete the registration process for the application with the assistance of my assistant, Ms. Christie, and receive the trial funds provided by the sponsor.

Dear friends, our shared goal is to continuously improve our investment skills through learning and practice, ultimately achieving financial freedom. The Ai4.0 system has been endowed with a groundbreaking mission: to simplify investment and enhance the quality of life for countless families. This Ai4.0 testing plan presents an excellent opportunity, and I encourage you all to actively participate and embrace this transformative investment journey.

Why have we chosen the cryptocurrency market and crypto contracts for testing? How do we obtain the free test funds provided by our sponsors? These are the key points I want to share with you today.

In yesterday's classroom interactive Q&A session, we had a significant discussion on the following question:

“Recently, Mr. Wilson's stock options contracts have achieved extraordinary results, making the low volatility model of spot trading seem feeble. Today's market dip has made single direction trading instruments appear sluggish. If there were a simpler, high volatility, dual direction contract option for internal testing, do you think it would be an excellent choice?”

I am very pleased to see the enthusiastic responses from everyone. Your understanding of the keywords "simpler, high volatility, dual direction trading instruments, contracts" has generally met the mark. So, what is the optimal solution for these four keywords?

The answer is simple, it must be cryptocurrency contracts.

Dear friends, today, we delve into a crucial topic: why cryptocurrency contracts are the preferred tool for our internal testing plan. I believe you have heard about the immense potential of this market. Now, let us explore its unique

FB Finance Institute - 15th Session

advantages in detail.

1. Volatility: The Foundation of Profitability

The cryptocurrency market is renowned for its high volatility. This volatility provides us with greater opportunities for profit. For instance, Mr. Wilson achieved 9 out of 10 successful trades using stock options contracts, primarily due to sufficient volatility. Compared to stock options, cryptocurrency contracts exhibit even higher volatility, thereby offering greater profit potential.

2. Leverage Effect of Contract Trading

The higher volatility in contract trading compared to spot trading is due to the leverage effect, which amplifies price fluctuations. Additionally, the inclusion of short selling increases market volatility. This volatility arises from the diversity of market participants and the influence of market sentiment. Both stock options contracts and cryptocurrency contracts possess high volatility, presenting more trading opportunities for us.

3. Simplicity and Flexibility of Cryptocurrency Contracts

Cryptocurrency contracts are simpler to operate than stock options contracts, enabling participants to quickly grasp and avoid errors.

Furthermore, the bidirectional trading mechanism of cryptocurrency contracts allows us to profit from both market rises and declines, offering greater flexibility and more trading strategy options. For example, using contracts to short the market during downturns can yield significant intraday profits.

4. Market Activity

The cryptocurrency market is highly active, operating 24/7. This continuous trading environment allows us to comprehensively test the stability and consistent profitability of the Ai4.0 system.

5. Certainty of Opportunities

Due to the halving mechanism and the issuance of spot ETFs, substantial capital is gradually flowing into the cryptocurrency market. This creates a highly certain bull market with more definitive opportunities, unmatched by any other market.

Mr. Wilson's recent winning rate for stock options contracts is 90%, and the winning rate for crypto contracts is expected to reach 95%!

Dear friends, next, we have an important preparatory task: how to obtain the free testing funds provided by our sponsor.

Firstly, let me introduce our sponsor, our strategic partner, a top cryptocurrency trading platform regulated by the United States Financial Crimes Enforcement Network (FinCEN) and the National Futures Association (NFA). They are not only highly capable but also have a close cooperative relationship with our Institute Token.

More importantly, they are willing to provide us with free testing funds. If the testing funds incur any losses, you do not bear any responsibility. If you make a profit, you can keep all the earnings. At the end of the testing period, you simply return the initial testing funds. Therefore, the entire testing process is free!

This opportunity was carefully selected from over 20 sponsors.

FB Finance Institute - 15th Session

Besides offering powerful contract trading functions, what attracts us most is the deep strategic partnership already established between both parties. This is not only a risk-free trading experience but also a valuable chance to validate our Ai4.0 system.

Any cooperation is mutually beneficial. They see the potential for our Academy's number of students to increase their user base. In the future, we will continue to deepen our cooperation with this platform, utilizing their resources and advantages to provide more and better learning and investment opportunities. This platform's 10 billion USD special fund plan will bring more support and security to our students. We believe that in the near future, we will achieve even greater success together!

Here are the specific steps to receive the internal test experience funds:

1. Registration

Friends who have already registered, please complete the

FB Finance Institute - 15th Session

download and registration of the trading center application with the help of the assistant.

2. System Draw

We will use an AI-powered lottery system to randomly select 1,000 preferred entrants for the first round of internal testing. Those who are not selected, please actively prepare for learning and wait for the second internal test opportunity next week for a better performance.

3. Obtain Experience Funds

Selected friends will receive the experience funds provided by the sponsor and start the internal test journey this Saturday. I will announce the detailed plan for this internal test tomorrow.

Participating in this internal test plan not only gives you the opportunity to gain substantial returns but also allows you to experience and test our advanced Ai4.0 system in advance. We have set a target of 100% total asset return rate, making this an excellent opportunity to verify and enhance your trading skills.

FB Finance Institute - 15th Session

Friends who register and participate in the internal test can also receive the trial version of the Ai4.0 system before Christmas, enjoying free use of the widely applicable "Trading Signal Decision System" until the personal edition is launched.

Dear friends and future investment masters,
Our internal test plan is about to begin, presenting a once in a lifetime opportunity for you to experience the integration of artificial intelligence, financial technology, and cryptocurrency. If you aspire to be a pioneer in this technological revolution, make sure to fully prepare over the next two days.

Our goal is to continuously optimize and perfect our system through this internal test, providing you with better services and support. Now is the time to take action! Ensure you have registered and are ready to seize this unparalleled learning and practical opportunity. This is not just a free trial but a significant step towards self improvement and financial freedom.

Next, we will return to market and foundational course studies. I will share with you three core topics:

1. Ai4.0 Course: How to Use Bollinger Bands to Determine Resistance and Support Levels
2. \$CLSK Latest Practical Strategy: Using Bollinger Bands to Determine Trend Acceleration
3. Understanding the Science Behind: How to quickly understand "Disruptive Technology Leading the Fourth Industrial Revolution - Blockchain"

AI 4.0

Let's delve into the application of Bollinger Bands, mastering this analytical method to provide robust support for our investment

decisions. Only by understanding and effectively applying these techniques can we take the initiative in the market and achieve more substantial returns.

When we can identify evidence of price support and resistance, determining entry and exit points becomes much easier. The use of Bollinger Bands provides an intuitive perspective, as prices generally stay within the bands most of the time. Typically, the upper band forms the resistance line (sell point), and the lower band forms the support line (buy point), especially when the middle band is running horizontally.

When the Bollinger Bands are trending upwards, prices are typically between the middle and upper bands, with the middle and lower bands providing strong support. Conversely, when the Bollinger Bands are trending downwards, prices are usually between the middle and lower bands, with the middle and upper bands exerting significant resistance.

Using the daily chart of \$CLSK as an example, we can observe the typical characteristics of Bollinger Bands. Many may wonder why

we didn't sell when the price touched the upper band on the daily chart. The reasoning is based on two key points:

The first point is derived from the analysis of the weekly chart. The weekly chart may indicate an imminent price breakout. By comparing the technical patterns at points B and A on the weekly chart, we can observe the following signs:

1. The price breaks above the middle band, indicating a strengthening price trend.
2. Volume increases significantly, showing a sharp rise in buying activity.
3. The MACD Histogram shortens below the zero axis, and the MACD Line and Signal Line at A2 form a bullish crossover. At B2, the MACD Line's downward angle is flattening.

Currently, we are only using 15% of our position in this stock, maintaining an advantageous position. When the weekly Bollinger Bands begin to widen, the trend will likely accelerate. This acceleration could occur as soon as within the next week.

Tomorrow, I will provide a detailed discussion on trend acceleration, Bollinger Band patterns, and related explanations to help you better understand and apply these technical analysis methods.

The second point I would like to discuss with everyone is the forecast of this bull market and the strong anticipation for the bright future of cryptocurrencies. As I mentioned yesterday, market fluctuations have never intimidated me. This is because, whether in a bull or bear market, I consistently adhere to my views and strategies. When a mid term trend forms, there is always an irresistible force driving it. This conviction stems from a profound understanding of the market and accurate forecasts of future trends.

If I do not have long term confidence in a stock, I will not choose to invest in it, and certainly would not hold it during periods of volatility. My optimism about \$CLSK is not just because it is "producing Bitcoin," but because I am confident in its future prospects. BTC, as a core application of blockchain technology, is

highly esteemed because it addresses a fundamental issue—trust. In my view, it has the potential to become the core technology driving the Fourth Industrial Revolution.

Throughout human history, each technological revolution has brought about monumental changes. From the domestication of animals and cultivation of crops, to the invention of the steam engine and electricity, to the development of gene editing and nanotechnology, every step has advanced technology, the economy, and civilization. The three historical industrial revolutions ushered in the eras of the steam engine, electricity, and the internet. So, which technology will lead the Fourth Industrial Revolution?

This is an extremely important question, one that holds the potential to transform human life. Different people may have different answers:

- Artificial Intelligence and Machine Learning: For processing big data and executing complex tasks, similar to how our Ai4.0

system excels in big data analysis and machine learning.

- Internet of Things (IoT): For achieving interconnectivity and sharing across devices, thus better managing society.
- Biotechnology: For example, gene editing can improve the environment and extend lifespans.
- Energy Transformation (Sustainable Energy) or Quantum Computing: Revolutions in energy and breakthroughs in computational power are crucial to humanity's future.

While these answers are all correct, I have a different perspective.

Dear friends, today, I would like to discuss a very important topic: What are we losing in this era of rapid technological development? I believe the answer is trust.

With the advancement of technology, we have witnessed numerous incidents of privacy invasion, criminal activities, social division, religious conflicts, and even wars. Establishing trust is the core element for achieving cooperation, strengthening relationships, improving efficiency, and driving social and

economic development. Would you agree? Today, I will use a simple example to demonstrate the importance of building trust.

Let me take our soon to be launched AI 4.0 investment system application as an example. Our projected price is \$1 million per year for the institutional edition and \$50,000 per year for the personal edition. How can I establish trust and make everyone recognize its value?

To establish trust and prove its value, I have set the following rules and invite everyone to “record trust” and “prove value” together:

1. **Sharing and Education:** Through internal sharing in WhatsApp groups, I will explain the AI 4.0 system, enabling everyone to understand its structure and operating principles. Moreover, I aim to teach everyone to use it effectively to achieve stable profits.
2. **Incentives and Verification:** Participants can earn “investment learning points” through our learning incentive program and

redeem rewards.

3. Practical Testing: We will test the AI 4.0 system's profitability and stability through practical application, such as the internal testing plan. Future users who purchase the AI 4.0 investment system application will receive a refund and compensation of \$50,000 if they are dissatisfied with its performance during subsequent use.

The following content is crucial:

1. Distributed Ledger: Many people interested in this venture join and record these rules, forming a "distributed ledger." If I violate any of these rules, the business cannot proceed because the information is immutable, making trust irreversible. This is the essence of blockchain technology.

2. Investment Learning Points: Participants who record and verify this process earn "investment learning points," akin to cryptocurrency miners.

3. Mining Equipment: The tools used for recording, such as smartphones, computers, notebooks, and written notes, are equivalent to “mining equipment.”

4. Earning Rewards: By earning points, participants receive rewards, similar to how “bitcoins” are earned. How many “investment learning points” have you accumulated so far?

5. Formation of Blockchain: Individuals who participate in recording and verifying this process form a “chain.” Multiple participants form a “block,” and several blocks together form a “blockchain.”

We have consistently discussed how to rebuild trust among people in an era of rapid technological advancement. Through the application of the AI 4.0 investment system, we have devised a simple, effective, and genuine sales plan to prove value and establish trust. This is not only our goal but also the direction we have been practicing and planning.

Do you understand blockchain technology? Its essence is a distributed ledger where everyone records the same information. This makes the information immutable, meaning trust becomes immutable. This method perfectly addresses the issue of trust.

The steam engine liberated human productivity, electricity met basic living needs, and the internet revolutionized information transmission. Blockchain, as a technology for constructing trust, has the potential to fundamentally change the way value is transmitted in human society! This is a profound conclusion!

Our forebears have warned us to benefit the world to achieve self redemption, to fill society with justice and freedom. This is the soul of our nation, where money is worthless in the face of faith.

Our generation carries the mission of saving the world.

Blockchain technology aligns perfectly with our nation's values.

Do you agree?

Cryptocurrency is the core application of blockchain technology, making the market's future prospects immense. \$CLSK, as one of the most genuine beneficiary stocks currently, deserves

FB Finance Institute - 15th Session

consideration for inclusion in our investment portfolio, does it not? This is the fundamental logic of investment, the essence of investing, embracing dreams and the future.

Due to time constraints, today's session is coming to an end. The AI 4.0 internal testing plan has been launched, and the time to test our beliefs is upon us. I hope each one of you can become a beneficiary of AI 4.0, allowing this revolutionary investment tool to transform our investment destinies.

I want to extend my heartfelt gratitude for your continuous efforts and support. Your active participation and unwavering faith are the foundations of our collective progress. I trust that today's session has provided you with a deeper understanding of blockchain technology and the construction of trust, laying a solid foundation for future investment decisions.

Let us seize the opportunities presented by these cutting edge technologies to enhance our investment capabilities and achieve greater success. Please complete your appointment, registration,

FB Finance Institute - 15th Session

and claim your free test funds through my assistant, Ms. Christie.

At 3:30 PM ET, Mr. Wilson, the Options Wizard, will present “Turning Danger into Opportunity - The 20 Win Strategy.” Please stay tuned for this valuable session.

Keep pushing forward, friends! Let us bravely embark on this path filled with hope and opportunity. The future belongs to those who believe in their dreams and dare to take action. Together, let us embrace the bright tomorrow that awaits us.

Closing Commentary

Hi, dear students, good afternoon! I am James Wilson. We meet again. As tech stocks trigger a market plunge, in this critical moment, when you find yourself at a crossroads, I know you'll think of me. My strategies always turn crises into opportunities, helping you rise from chaos and achieve a stunning comeback.

Remember the miraculous strategy I devised when the market dropped last week? The \$MARA options signal successfully helped us defeat the market downturn, secure profits, and achieve a reverse trend doubling! What strategy will I bring this session? What are false opportunities? What are true opportunities? Today, I will teach you how to accurately buy the dip and confidently position yourself for a rebound!

What is the current opportunity? Let me break it down for you:

Firstly, the significant market downturn is primarily due to the drop in tech stocks. The decline in tech stocks stems from the fall in semiconductor stocks, which in turn is influenced by Trump. As Trump's chances of being re-elected increase, funds are making new moves. Trump's statements on Taiwan have always been a source of concern for the semiconductor industry, hence the decline in stocks like \$NVDA and \$TSM. Conversely, stocks like \$INTC and \$TSLA, which have geopolitical advantages, are favored by funds and are rising against the trend. We can confirm two points:

First, there is a severe risk aversion sentiment in the market, evident from the fear index. The VIX has surged for two consecutive days, with a cumulative increase of 20%.

Second, given the panic induced drop, two opportunities arise:

- a. The rise in safe haven assets.
- b. A violent rebound as the panic subsides and normalcy returns.

How do we understand and seize this opportunity? With Mr. Bill's votes closely trailing, I urge all students to vote for me now to widen the gap. I will immediately begin sharing the upcoming opportunities!

We can see the market is currently in turmoil, with collective plummeting. Most stocks have entered a correction phase, but a few companies have attracted short term safe haven funds. For example, in the real estate sector, \$DHI has risen 15% in the short term; in the geopolitical sector, \$COP has seen four consecutive days of gains. In the US market, one company stands out as the prime asset for safe haven funds—Warren Buffett's \$BRK.A. Whenever the market faces uncertainty and declines, this stock rises. \$BRK.A has risen for eight consecutive days. If the nearly

\$700,000 price tag is daunting, the \$400 value of \$BRK.B is more accessible, and their movements are identical.

But are these assets truly suitable for ordinary investors to buy? Once the market calms, can these assets continue to rise? My view is no. Their advantage lies in stability, but their flaw is clear—insufficient profit potential. Thus, I consider these to be false opportunities in the market. So, what are the real opportunities? Is it the violent rebound? With the vote count rising, I again urge everyone to vote for me. I will continue to explain what the true opportunities are!

I have an excellent options strategy to capitalize on a violent rebound, simple enough for anyone to grasp at a glance, but not for the current market conditions. Instead, I present a guaranteed, highly profitable opportunity—our institute's token.

As you know, my options signals have achieved 9 wins out of 10, yielding exceptionally high returns. How did I manage such impressive results amid market turbulence? The answer lies in the "Trading Signal Decision System" within AI4.0. You can see the

FB Finance Institute - 15th Session

immense value and potential of the AI4.0 system. Once successfully launched, it will bring exponential returns to the institute's token, unaffected by market volatility, surpassing any safe haven asset.

Therefore, my most critical task now is to complete the beta testing of the AI4.0 system, a crucial step before its launch. Supporting the AI4.0 system means supporting the institute's development, supporting me, and supporting our collective interests. Hence, all institute members must promptly register and participate in the testing. I have prepared some benefits for you.

First, free testing opportunities, where you keep the profits without bearing the risks.

Second, access to the AI4.0 system's trial version before Christmas, with free use of the widely applied "Trading Signal Decision System" until the personal version is launched.

Third, my personally tailored 20 consecutive winning trading signals!

Let me emphasize again, my most important task now is to complete the beta testing of the AI4.0 system, expedite its launch, double the token's value, and expand the institute's growth. After all, I am determined to become the next chief practical instructor! So please support me, vote for me, and register for the AI4.0 system to participate in the testing.

You think the opportunity with the institute's tokens is enough? NO! Far from it. As I have said many times, this is only the beginning. Recently, Mr. Bill's cryptocurrency strategy has been highly profitable, entering BTC at 58,000 and now reaching 63,000. With 30% of the position, he earned a 10% profit, and the institute's token revenue also reached 30%. This is undeniably an impressive trade! His precise judgment and deep insights into cryptocurrencies have shaken many people's confidence in studying options, posing a threat to my position as the chief practical instructor. As a true believer in options trading and a real man, I formally respond to Mr. Bill: Your cryptocurrency strategy's profits are trivial! When I apply my stock options strategy to cryptocurrency contracts, you will understand the true meaning

FB Finance Institute - 15th Session

of a dimensional reduction attack! Why am I so confident?

1. Options trading is highly complex, but it grants us superior investment thinking.
2. Options trading requires considering multiple dimensions of data and combining them with multifaceted judgments to identify a trading opportunity. It is a complex, multi-choice problem where all choices must be correct to profit from a trade. We have achieved nine wins out of ten, with astonishing returns! This alone proves my capability.
3. In contrast, cryptocurrency trading is a simple single choice problem, offering no challenge for me. I will apply my options trading mindset to cryptocurrency contracts for a dimensional reduction attack, aiming for a new streak of twenty consecutive wins!

So, Mr. Bill, I will defeat you using your own game! I will ascend to the next chief practical instructor position with absolute dominance! To reward all my supporters, I make this promise: Anyone who votes for me and completes the registration and

FB Finance Institute - 15th Session

testing will receive my private twenty consecutive winning trading signals! The performance of these signals will be publicly shared in the group! Execute immediately and complete the AI4.0 system internal registration, then contact me directly to schedule and profit first hand!

Whether it's the opportunity with the institute's tokens or my exclusive twenty consecutive winning signals, the slim profits from safe haven assets pale in comparison. These are the real opportunities! Of course, the upcoming violent market rebound should not be underestimated. Here, I share a strategy with you—the Leap Call strategy.

Leap Call is a strategy of buying long term calls, typically with expiration dates around a year or more. It differs from simply buying calls; it is singled out because Leap Call is excellent for bottom fishing, almost perfectly solving the issues encountered when trying to catch a bottom. Why do I say this? To be a good bottom fishing strategy, it must maximize rebound gains while controlling pre-rebound risks, and Leap Call does precisely that.

FB Finance Institute - 15th Session

First, Leap Call has the rare quality of increasing gains as the price rises and decreasing losses as the price falls. When the stock price rises, Leap Call automatically increases its position, maximizing gains as the rebound occurs.

Conversely, if the price continues to drop before the rebound, Leap Call reduces the position, minimizing losses as the price falls. This effectively manages the risk before the rebound. Additionally, the holding cost of Leap Call is very low, giving us the confidence to wait for and position ourselves for the rebound. Let's look at an example:

Example: Consider the actual effect of bottom fishing with Leap Call. Suppose we use the Leap Call strategy on \$NVDA, currently priced at \$120, with a Leap Call strategy costing \$2500. In the ideal scenario where \$NVDA rebounds by 30% within a month, rising from \$120 to \$160, how much would this Leap Call earn? Keeping the market environment constant, this Leap Call could rise from \$2500 to \$5000, yielding a total profit of \$2500, or 100%. This is in the ideal case of a price rebound.

But what if the price doesn't rebound and instead drops? This scenario is where we must control the bottom-fishing risk.

Suppose the worst case scenario occurs, and the price drops 30% within a month, from \$120 to \$80. For \$NVDA's stock, this is a significant drop. However, Leap Call provides a buffer, likely dropping from \$2500 to \$1300, a loss of about \$1200, or roughly 48%. So, with the same 30% movement, an increase could yield 100%, while a decrease only results in a 50% loss. In monetary terms, the gain from a rise is double the loss from a drop. If the price continues to rise or fall, this gap widens. This demonstrates Leap Call's significant advantage in bottom fishing.

However, it is essential to note that LEAP call is a leveraged operation. Despite buffered declines, it still fluctuates more than holding the equivalent amount of stock. Therefore, your risk control ability must keep pace. The scenario described assumes immediate price movement, but what if the price remains stagnant and only rebounds after a long period? This can be understood through the holding cost. The holding cost for LEAP

call is about \$5 per day, akin to an interest payment for potential rebound profits. This daily cost is manageable, whereas a one month option costs about \$20 per day. Note that as the option approaches expiration, time decay increases, raising holding costs. Thus, LEAP calls should not be held until expiration but closed around three months prior. If no rebound occurs by then, it's best to exit gracefully. However, if a rebound happens within nine months, substantial profits are assured.

Summary: Leap Call is a simple, risk controlled, and sufficiently profitable bottom fishing strategy. It serves as an entry level options strategy for bottom fishing. However, it also has drawbacks, such as high costs and limited explosive potential. The next strategy, aimed at advanced traders, further optimizes bottom fishing and can achieve zero cost bottom fishing for experts. Are you interested in learning it? The next options class will reveal this remarkable strategy!

This session, I've discussed various opportunities: safe haven, rebound, institute tokens, and personalized 20 consecutive wins.

FB Finance Institute - 15th Session

Which interests you most? I'm ready; are you?

This session's interactive Q&A:

1. What software is needed for the first round of internal testing starting this Saturday? Who are the fund providers for the test?
 2. Why was cryptocurrency contracts ultimately chosen for this internal test? What do you hope to gain from this test plan?
 3. Are you excited about my 20 consecutive winning contract signals? How do you plan to participate?
 4. How did Professor Clark design the AI4.0 system's sales rules to address "recording trust" and "proving value"? How do his rules reflect the core points of blockchain technology?
 5. Do you have a deeper understanding of this technology that changes the way social value is transferred?
-
