

Morning Review

Good Morning, Dear Friends!

I'm thrilled to share some exciting news with you all: AI 4.0 is about to enter its internal testing phase, with our first internal test set to launch tomorrow. This isn't just a technological leap; it's a significant transformation in our approach to investing in the future!

FB Finance Institute - 15th Session

Regarding the current stock market, I feel more confident than ever. Yesterday, the VIX Fear Index surged by about 10%. Such rare emotional swings often indicate a one time release of market tension. With the VIX still below 20 points, this means we can confidently hold our positions and even buy on dips, preparing for more opportunities ahead.

The AI 4.0 system is poised to become the golden key to unlocking our dreams. I have meticulously prepared for this internal test and am convinced it will be an unforgettable experience. I warmly invite each of you to join us in this journey and personally experience this groundbreaking AI tool that will transform our investment future. Each participant is a vital part of this revolution, and your involvement will drive this groundbreaking change forward.

Next, I will share with you the milestone events and learning plans for AI 4.0's first internal test. This is not just a demonstration of technology; it's an opportunity for learning and growth. Together, we will explore and learn how to use this

FB Finance Institute - 15th Session

cutting edge tool to achieve our dreams.

This is our shared goal and the driving force behind our progress. Let's take this exciting step together and enter a smarter, more efficient, and profitable world of investing.

1. The Four Key Objectives of This Internal Testing Plan

Objective 1: Gathering Extensive Testing Data Through High-Frequency Trading

We will leverage markets and assets with high certainty, volatility, stability, and low risk for extensive testing. This test focuses on our Ai 4.0-Trading Signal Decision System, aiming to gather substantial usage data. These data points will validate the profitability and stability of the Ai 4.0 system, laying a solid foundation for future success.

Objective 2: Gaining More Practical Experience with High-Frequency Trading Models

By employing high-frequency trading models, we will significantly enhance your understanding and application of the Ai 4.0 course

framework. This initiative will rapidly elevate our Institute's practical trading skills to an expert level this semester, serving as a token of our appreciation for your support.

Practical experience is the best teacher. After each trade, I will promptly summarize the methods and insights gained.

High-frequency trading, like learning under a microscope, will accelerate your growth, enabling you to master cutting edge trading techniques at lightning speed!

Objective 3: Seizing the Cryptocurrency Market Advantage

Why are we resolute in choosing cryptocurrency market contracts as the primary focus of this internal testing plan?

- The halving cycle in April has triggered the current bull market, with BTC projected to reach \$350,000. This makes BTC more precious than gold, signaling an unstoppable bull run!
- The implementation of spot ETFs has brought institutional funds into the market, with 11 BTC spot Bitcoin ETFs flourishing. The imminent launch of ETH spot ETFs further elevates bull market expectations.

- Rate cuts are enhancing the bull market, improving the outlook for the cryptocurrency market.
- Historically, election years have been favorable for cryptocurrencies. This election cycle's focus on cryptocurrencies is unprecedented.
- The ongoing expansion of the cryptocurrency mining industry shows increased financial stability and growing scale.
- The expected release of functional second-layer networks in the fourth quarter will improve transaction efficiency in crypto networks and continuously reduce usage costs.

Objective 4: Pursuing Higher Profits

Despite the recent stock market's lower profitability compared to the previous term, our recommended stocks still maintain nearly a 90% success rate. Stock options have an even higher success rate with significant returns and strong feedback.

Contract trading is widely favored, and within high success rate strategies, Ai 4.0's related strategies for cryptocurrency contracts boast a 95% success rate.

The only thing that can outperform contracts is contracts

themselves. Among these, cryptocurrency contracts are particularly appealing due to their high volatility, leverage effect, simplicity, flexibility, and market activity.

Are you ready to join me in witnessing and challenging this new journey of profitability?

2. Testing Period, Profit Targets, and Success Criteria

Our testing period will span 3-5 days (including the weekend), with the goal of achieving a total asset return rate of 100% to 300%. Since this is our first test, we have set a conservative target, focusing on signals with the highest risk control coefficient.

Success Criteria: Achieving a 100% or higher profit within the testing period will be considered a successful plan.

Failure Criteria: The occurrence of any single losing trade during the test will be considered a failure.

3. Slots and Test Funds

The first internal testing plan will have 1,000 slots available. From our Institute's teaching philosophy and my daily shares, you

should see that I am a conservative person. Considering this is our first internal test, I have adopted a conservative approach.

Friends who are not selected can still observe and learn.

Those who have already signed up will be ensured a spot in the second round of internal testing next week.

If you haven't signed up yet, there's still time to enroll and seize the opportunity!

Each participant will receive \$500 in test funds through my assistant, provided by our sponsor. As I've mentioned, I won't let you take on the risk for my venture, so I've secured these sponsorships. Our strategic partner is a top tier company regulated by the US Financial Crimes Enforcement Network (FinCEN) and the National Futures Association (NFA). You can find more detailed information about the company on the 'Academy' section of the app's homepage.

Not only that, but they also have plans to list on NASDAQ and are dedicated to establishing a high quality ICO issuance base. This

FB Finance Institute - 15th Session

presents us with excellent investment and collaboration opportunities. For instance, our Institute's tokens were issued here. Additionally, we share a strong alignment in the field of Ai; they have a dedicated \$10 billion Ai fund plan, offering an excellent platform for our talented students to showcase their skills.

Last week, the "Shark" shared some essential tools for cryptocurrency beginners with everyone. He recommended five unique applications and one intermediary wallet application. If you have any questions, feel free to ask him or consult my assistant, Christie. She is an excellent software engineer and can help you easily identify the quality of applications and guide you on their proper use.

I want to emphasize two important points:

1. No one is allowed to use their own funds for the test.

I am concerned that someone might make unnecessary mistakes due to unfamiliarity with the operations. I do not want anyone to take risks because of my endeavors, not even a penny. This

concerns the Institute's reputation. Obtaining accurate data is more important than temporary profits. By not investing your own funds, you can approach the test with a calm mindset, ensuring that the data obtained is genuine and effective.

2. Regarding the use of funds and profit allocation:

After the test, if the test funds experience losses, there is no need to repay the lost principal; just return the remaining funds.

If the test is profitable, you only need to return the principal, and the profits can be withdrawn at any time, for example, transferred to your intermediary cryptocurrency wallet, etc.

Dear friends, I want you to understand that every step we take is to ensure your learning journey is safe and effective. The cryptocurrency market is volatile, with both opportunities and risks. Here, we are not just pursuing profits but also cultivating a mindset that calmly handles market fluctuations. This mindset will be your most valuable asset in your future investment journey.

4. Execution Process

Our assistant team has already notified the selected participants, ensuring you have received your accounts and test funds, along with detailed instructions on how to use them. If you encounter any issues during the process, please do not hesitate to contact them or watch the relevant tutorial videos.

Once the plan begins, we will select the most stable trading strategies and signals based on the Ai4.0 system prompts. We anticipate around 2 trading signals per day, ensuring that each signal undergoes rigorous screening.

To ensure every trading signal is executed precisely, we will share the signals in a dedicated group. This will prevent any interference and guarantee fast, accurate execution.

Participants must strictly follow the trading signals for buying and selling. After executing a trade, please send a screenshot of the transaction to the group or to my assistant for verification. Strict adherence is essential to ensure the authenticity and

effectiveness of the data.

5. Rewards

To show our gratitude for your participation and support, we have prepared the following exclusive gifts for those who have reserved a spot in the internal testing plan:

- Free Ai4.0 Investment System Personal Edition for Three Months (worth \$12,500)
- Raffle Entry: You will have a chance to win prizes up to \$5,000.
- A specially selected investment book, acclaimed as the most precise investment guide in the industry, which will be an invaluable resource in your investment journey.

Additionally, those who have made a reservation and, with the help of our assistant, completed the app download, registration, received the test funds, and participated in the internal test, will receive access to the "Ai4.0 Trial Edition" before Christmas.

This trial edition will allow you to use the widely applicable "Trading Signal Decision System" free of charge until the personal edition is officially launched. This means you can enjoy the

FB Finance Institute - 15th Session

benefits of this revolutionary investment tool even before the official release.

Dear friends, students, and future investment masters,
We stand at the threshold of a brand new journey. This testing plan is not just an opportunity to learn, but also a chance for discovery and growth. The Ai4.0 system promises to bring us an unprecedented investment experience, and your participation will help us unveil its magical potential.

Don't hesitate—get involved and become a witness and beneficiary of this revolutionary investment tool! Together, let's embrace a future filled with opportunities and challenges. I look forward to witnessing the miracles that the Ai4.0 system will bring us in the near future.

Thank you for your trust and support. Let's embark on this exciting journey together!

Now, I would like to share with you a milestone perspective. It

FB Finance Institute - 15th Session

concerns the mighty US dollar, our economic strategy, wealth freedom, and making our country great again. A strong presidential candidate, Trump, might announce Bitcoin as a strategic reserve asset at this year's Bitcoin conference.

In his recent campaign activities, he also emphasized his hope that Bitcoin and crypto companies will come here, believing that all remaining Bitcoin companies should be created in our country. This, he believes, will help achieve "energy sovereignty."

So, what enormous impact could this have on the cryptocurrency market? This is the other key topic I want to discuss with you today.

AI 4.0

In today's constantly changing global economy, we must always be prepared to face various uncertainties and financial crises. Strategic reserve assets play a crucial role in safeguarding a nation's economy, ensuring we can swiftly mobilize resources in emergencies. Traditionally, these assets include gold, crude oil, foreign exchange reserves, and government bonds.

However, with the advancement of technology and financial innovation, BTC is gradually emerging as a new type of strategic

reserve asset, deserving of our in-depth discussion and attention.

As a decentralized digital asset, BTC is not controlled by any single country, giving it unique risk resistant qualities. On a national level, incorporating BTC into strategic reserves not only acknowledges its long term appreciation potential but also diversifies the country's reserve assets, reducing reliance on traditional assets.

Historically, the Bretton Woods system established a stable international monetary system after World War II, linking the US dollar to gold, which ensured the stability and trustworthiness of the dollar. In the 1970s, we made agreements with major oil exporting countries, creating the petrodollar system, further cementing the dollar's status as the world's reserve currency.

Similarly, BTC, known as "digital gold," possesses scarcity and anti-inflation properties, independent of any country's economic situation. It can serve as a tool to combat currency devaluation and protect purchasing power, reducing reliance on single foreign

exchange reserves.

Moreover, the decentralized nature of cryptocurrencies and the application of blockchain technology can provide an alternative to traditional financial systems, enhancing the diversity and security of the financial system, and promoting economic innovation and growth.

BTC, traded and valued in dollars, can even increase global demand for the dollar, reinforcing its status as the international reserve currency, and becoming a new generation of strategic reserve assets.

Friends, imagine if BTC becomes a national strategic reserve asset. Global governments would surely follow suit, and institutional investors would rush in, driving its future value even higher. We are about to witness this historic moment.

Whether or not the next president can make America great again, BTC will undoubtedly bring new prosperity and opportunities to our nation. BTC will not only symbolize financial innovation but also serve as the driving force for America to reclaim its peak!

FB Finance Institute - 15th Session

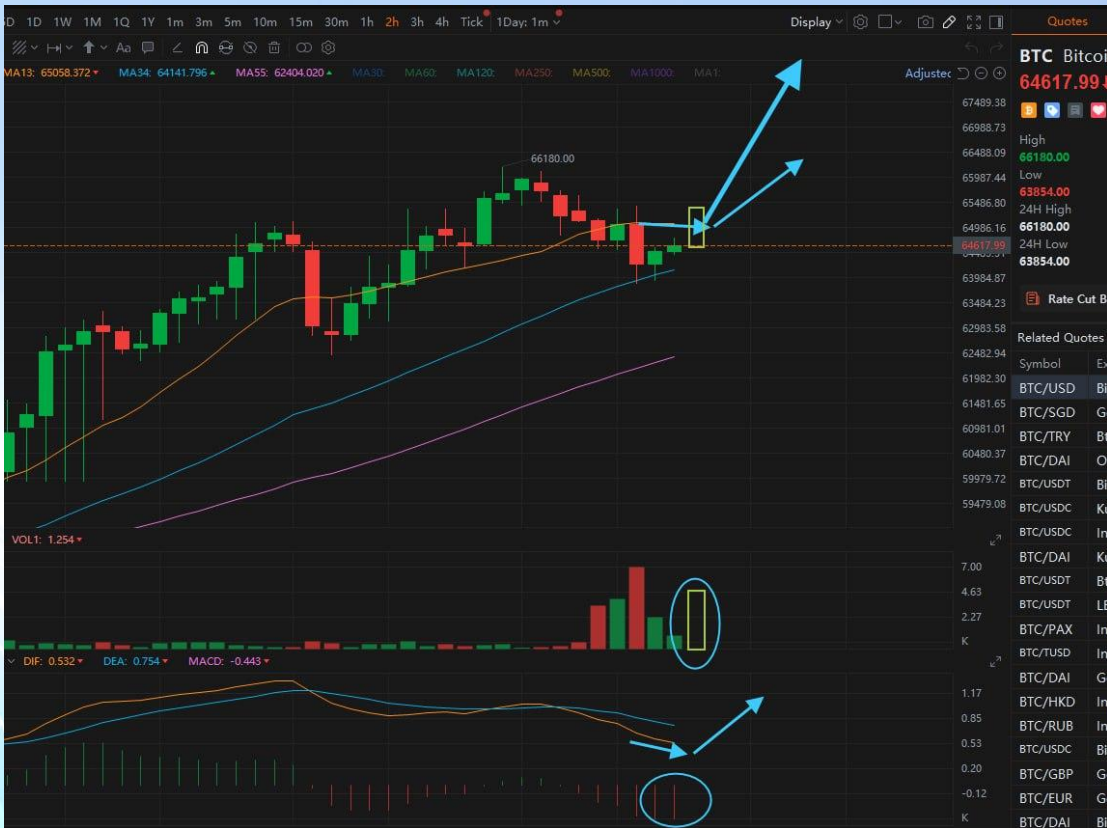

Friends, the era of BTC has arrived. Let us seize this once in a lifetime opportunity to make America great again! Our actions will define the future and inspire the world. Let BTC lead us to new heights, fighting for the almighty dollar, for BTC, and for the future of our country!

This afternoon at 3:30 PM ET, we will hear from the “Shark,” an expert in cryptocurrency contracts. Yesterday, the “Wizard” issued a powerful statement and announced a 20 win strategy. How will the “Shark” respond? This epic showdown will provide us with endless inspiration and motivation!

The first internal test and learning plan for the Ai4.0 system will officially begin tomorrow. Everyone, please be ready! Each one of you is a crucial part of this grand plan. Let’s advance together, grow through practice, and become those who wield the most powerful investment tool!

Have a wonderful day!

Closing Commentary (α & β Strategy)

Ladies and gentlemen, good afternoon! "Simplify investing, elevate countless families' quality of life." I'm Richard Bill, a devoted disciple of Prof. Clark, a proud beneficiary of the AI 4.0 system, and a fierce contender for the next Chief Practical Instructor. Your unwavering support means everything to me!

Let's dive right in. Do you remember the prediction chart I drew

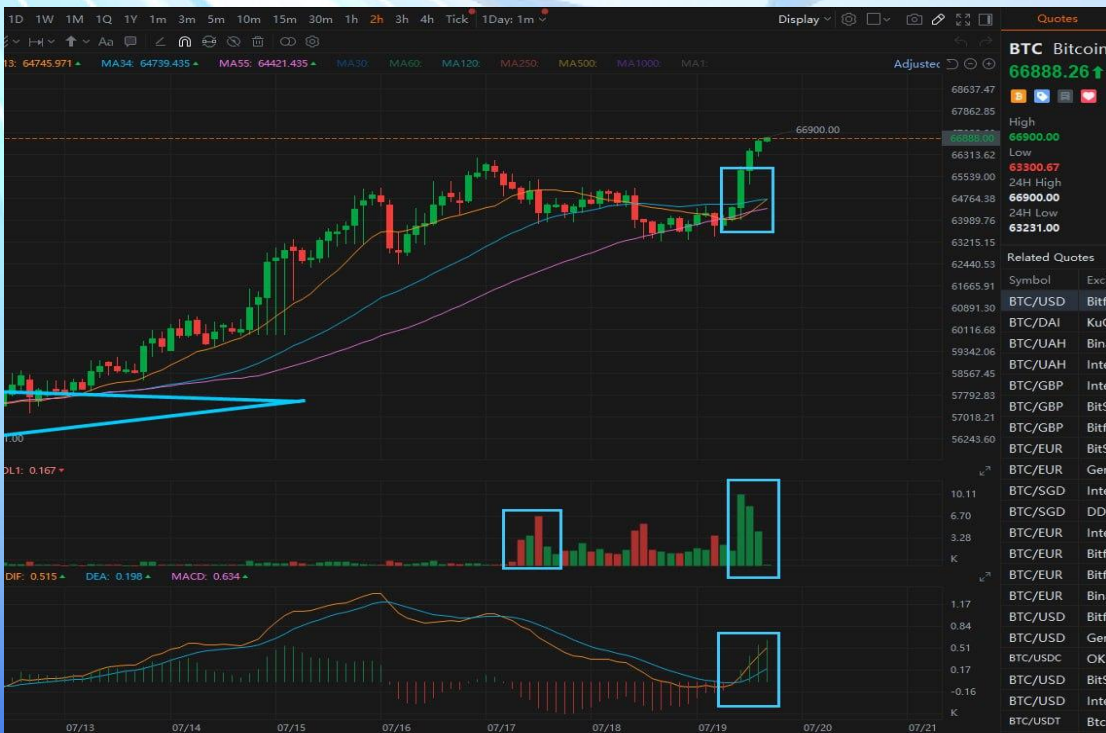

FB Finance Institute - 15th Session

on Wednesday and the two critical points I highlighted?

~ Here's when you strike: when the MA34/55 shows a bullish alignment, and the MA13, after a downward move, starts turning upward near the MA34. When a mid to large bullish candle crosses or stays above the MA13 with increasing volume, and the MACD's DEA/DIF shows a bullish crossover—that's the killer buy point in our α & β strategy.

~ It's heading in that direction: as the MACD's negative value begins to shrink, keep an eye on the DIF. It will start turning upward, and the MA13 will follow suit. This setup will propel you like a rocket towards \$70,000.

FB Finance Institute - 15th Session

Folks, let's tear into this 2hr BTC chart! This is the highlight of today: how I lead my team to the top!

Why was I able to predict this movement ahead of time? Because I'm always ahead of the curve. All the key indicators—MA13, volume, DEA/DIF—are like alarm clocks, ringing and flashing right on time.

I urge you to break free from the shackles of precise entry points and add positions smaller than your original ones. This isn't contract trading; it's spot trading. The magic of spot trading? It's insanely simple—you can be sipping cocktails on the beach while your investments skyrocket.

I've been loudly advocating for holding Institute tokens, back when they were around \$2.20. And now? They've broken through \$2.50, with net profits soaring around 14%. From my initial recommendation at \$1.80, the returns have skyrocketed to 39%. So, are you riding the wave? Folks, how much profit have you made with over 60% of your position? Is it enough to earn your vote for me once again?

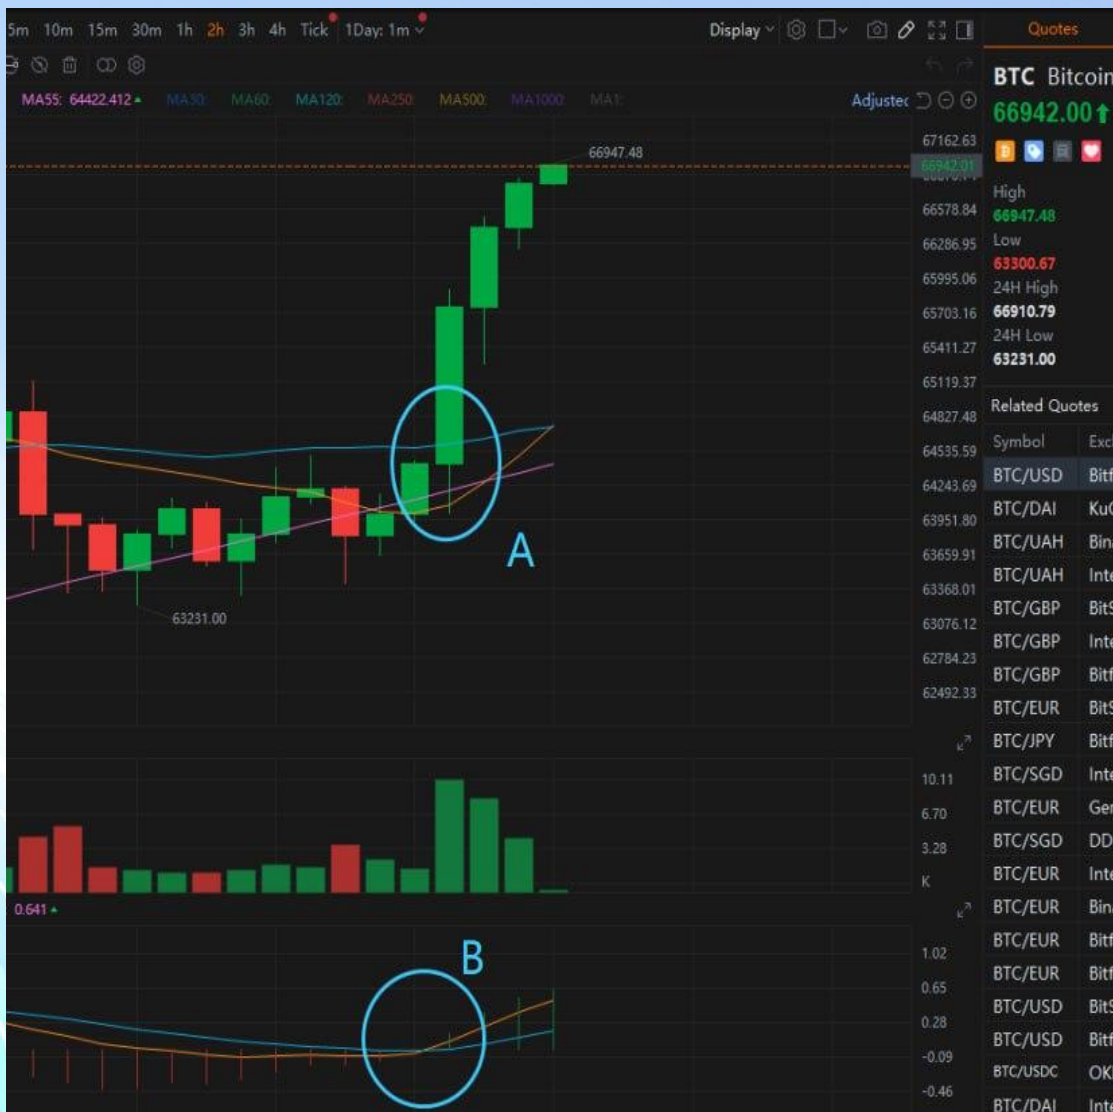

Have you ever imagined what would happen if we went all in and fully utilized contract trading? How I would dominate the market and how much we would reap? Let's break it down.

Last week, BTC was at \$58,000. On Wednesday, it hit \$64,617, and today it's at \$67,000. Spot trading yields decent returns, around 15% and 4%, respectively. But what if we used 100x leverage in contract trading? The returns would explode to 1500% and 400%! Here's the deal: In contract trading, we never fight an unprepared battle. We wait for clear trends and strike at the perfect moment. We might earn less overall, but in these short bursts of movement, easily snagging 200% profits is a piece of cake! Imagine the feeling of harnessing this power. Are you ready to conquer the market with us?

AI 4.0

FB Finance Institute

What is a clear trend? Let's cut to the chase. Look at point A in the chart: the candlestick suddenly breaks through the moving average combo. Now, check out point B: the MACD shifts from negative to positive, and the DEA/DIF lines form a bullish crossover. These are indicators anyone can see and

FB Finance Institute - 15th Session

understand—they're not as complicated as the Greek letters in options trading, right?

Some might ask, “Last week you drew a triangle, this week you explained a few moving averages that look like spaghetti, and then you went to sleep, and the trend was born. How did you do it?”

Alright, folks, if you have the same question, vote and let me know. I'm here to satisfy your curiosity. What I'm about to share next isn't just about leading you to success; it's about teaching you how to outsmart Mr. W and achieve financial freedom in the coming years!

h Session

First off, the number one reason is my absolute, unshakeable confidence in my $\alpha&\beta$ system! This system is a wild branch of the AI 4.0 framework, optimized from Prof. Clark's top tier quant trading model. Imagine having the ultimate surfboard, perfected through relentless testing and tweaking, ready to conquer the biggest waves. The principle of quant trading is simple: through historical backtesting, we pinpoint the conditions that generate the most accurate signals. The MA13/34/55 indicators are derived from this rock-solid foundation. But that's just the appetizer—in my upcoming courses, especially the hands on sessions, I'll break these down in detail.

Folks, from these two BTC spot trading strategies and charts, you've probably caught onto my style by now. Why do I tell you to act first and validate the method's effectiveness later? Because I have ironclad faith in my $\alpha&\beta$ strategy. It's like climbing a mountain—you don't overthink every step; you trust your gear and training. If I hadn't bought a vineyard in Europe, the money I've made with this method would be enough to retire on.

Why do I say Prof. Clark is the person I respect the most, second only to my father? Because under his rigorous training, I learned the shortcuts to changing my destiny. And you, you're even luckier than I am. Through this session's internal testing plan and related courses, you can master the advanced AI 4.0 trading signal decision system, with many strategies boasting a win rate of up to 95%.

Thanks to my mentor's generosity, I'm participating in the election for the next Chief Practical Instructor. Although I don't like being confined, this is the highest honor, the pinnacle goal of my career, so I'm giving it my all.

My pursuit is straightforward: to surpass historical brilliance and make more money than I could ever spend. I believe many of you share my drive, willing to turn dreams into reality. I have absolute confidence in achieving this goal and in leading some of you to achieve it as well.

Spot trading is crucial; it's the foundation of all trading. But it's not my focus. What truly excites me is contract trading—that's my specialty. This internal testing plan focuses on crypto contract trading, and here, I dare to claim the throne! Stand by my side,

FB Finance Institute - 15th Session

and you'll walk with the king, fighting for greatness! Please don't hesitate to cast your vote. Thank you!

The second reason is that, according to my mentor Prof. Clark's AI4.0-Expert and Investment Advisory System, we had already anticipated today's crypto market trends. Mr. W's high success rate with his options strategy? Entirely thanks to this system. This branch of the system is like the All-Seeing Eye, helping us grasp the macro view and precisely pinpoint the main direction.

FB Finance Institute - 15th Session

This morning, Prof. Clark shared the immense value of BTC as a strategic reserve asset. Trump's recent statements have already shaken the investment market. Let me share my thoughts. Why is the stock market dropping? Trump doesn't want to cut interest rates before the election. This means if he wins, the stock market will soar. So, any current dip is a prime buying opportunity.

Similarly, Bitcoin's recent dip—will it surge around Trump's participation in this BTC conference? Absolutely, and it's already happening! Prof. Clark's identified \$53,000 as the bull bear dividing line has shown remarkable effectiveness; the price has stabilized and begun to rise. Daily chart volume is increasing, and the bulls are taking control. Isn't this the chance to break through historical highs? The AI 4.0 testing plan focusing on crypto contracts is the best choice!

Folks, I urge you to understand and appreciate the critical importance of this AI 4.0 internal testing plan. Let me break it down for you, straight and simple:

~ Direct Profits: \$500 in testing funds might not sound like much,

FB Finance Institute - 15th Session

but if we achieve over 100% total asset return in the next few days, that profit will be at least \$500, all yours. Think about it—this is like finding an extra 500 bucks lying around.

~ A Solid Investment Portfolio: The stock market is snoozing, while the crypto market is blazing hot. This highlights the importance of seizing opportunities. Combining crypto spot and contract trading means lower risk and higher returns. Can you afford to miss out on this chance?

~ Learn a Stable Profit Model: My teaching style is all about practical, real world trading. No theoretical fluff. This approach genuinely helps students improve. It's the fastest way to become a trading pro.

~ Witness and Own a Revolutionary Investment Tool: Our Institute is more eager than anyone to see this testing plan succeed. This is Prof. Clark's life's work. As a token of gratitude, he's offering more benefits, like free usage rights. It's like being handed the keys to a Ferrari.

~ Commercial Value – Institute Tokens: If the test succeeds and the product launches, it's a massive commercial win for us (and it'll boost the value of the Institute and the tokens). For you, it

FB Finance Institute - 15th Session

means access to a groundbreaking, easy to use investment tool!

Folks, listen up! When you see this message, it means the first AI 4.0 internal testing plan has officially entered the countdown.

Here's the deal:

~ If you haven't reserved your spot in the testing plan, don't wait. Skip the line, contact the Institute's assistant right now, grab your spot, download the app, and claim your testing funds immediately.

~ For those who have already reserved their spots, stop sitting around. Get in touch with the Institute's assistant, download the app, and get ready for the first or second phase of the testing.

Now, here's the crucial part. Despite Prof. Clark's insistence that you shouldn't use your own funds for the test—because many of you might not be familiar with contract trading—spot trading is an obvious opportunity. BTC is on the brink of a massive breakout, ready to smash historical highs and shoot to the moon. The AI 4.0 testing plan is here, and the chance to double your investment in Institute tokens is right in front of you.

FB Finance Institute - 15th Session

So, folks, what's next? Dive headfirst into the first or second phase of the internal test and experience the power of this technology firsthand. Stay glued to the group, soak up every brilliant lesson. And third, go all in with a BTC and Institute token spot trading combo, and watch your profits soar like a rocket! This is your moment. Vote for me, and I'll be your partner on the journey to financial freedom! Looking forward to our next session.

Today's Interactive Q&A:

1. Are you fully aware of all the details of the AI4.0 internal testing plan? Do you have confidence in achieving a 100% total asset return in this plan?
2. Do you understand Prof. Clark's interpretation of BTC as the new strategic reserve asset? Do you believe that BTC spot or contracts should be a staple in our investment portfolio?
3. What are your thoughts on this internal testing plan and the direction of the cryptocurrency market affecting Institute tokens? Are you willing to support it with real action?
