

Morning Review

Dear Friends, good morning!

Dreams are the lights that illuminate our lives and guide our paths forward. Let us hold tightly to our dreams, for if they fade, life becomes like a bird with broken wings, unable to soar.

July, a month filled with hope and passion! As our global supporters return, the Institute is set to host an unprecedented event. This month, three major activities await your participation. These events are not only relevant to each individual's interests but also crucial in determining the future development of our collaborative investment haven.

July is both a joyful learning season and a period of exceptional benefits! In this season of fruitful joy, what investment focal points should we pay attention to? Last week's non-farm payroll data ignited the enthusiasm of investors across major markets. As earnings season approaches, which investment directions are

FB Finance Institute - 15th Session

most worth increasing positions in? What are the fully sufficient and necessary reasons?

Friends, seize each day to get closer to your dreams! Let us set sail together and embark on an exciting July journey!

Important Notice: Missing Out on This Opportunity Could Cost You Dearly!

Dear Friends, do you know that the recent stock options strategies by Options Wizard Mr. Wilson have yielded an impressive cumulative return of over 400% in just about a week? However, I have noticed that some of you have achieved returns below 200%. Why is this?

The answer is simple: they did not give due importance to real time market movements and position allocation!

Whether you are trading stocks or options, maximizing your returns requires vigilant attention to market dynamics and

FB Finance Institute - 15th Session

adjusting your positions accordingly. Failing to do so can lead to missed profit opportunities or even losses.

To help you avoid such pitfalls, I have decided to disseminate today's strategy individually through my assistant.

Please contact my assistant immediately to receive today's strategy. Remember, opportunity favors the prepared!

Let us seize the latest market pulse. Last Friday's non-farm payroll data indicated a contraction in both our service and manufacturing sectors, signifying an economic slowdown. What does this imply? The expectation for a Federal Reserve rate cut in September is nearly certain, heralding a jubilant stock market rally!

Data shows that investor expectations for a September rate cut by the Federal Reserve have soared to 77%! The dollar index and US 10-year Treasury yields are starting to decline, benefiting risk assets. The VIX fear index remains at historically low levels, significantly enhancing market risk appetite.

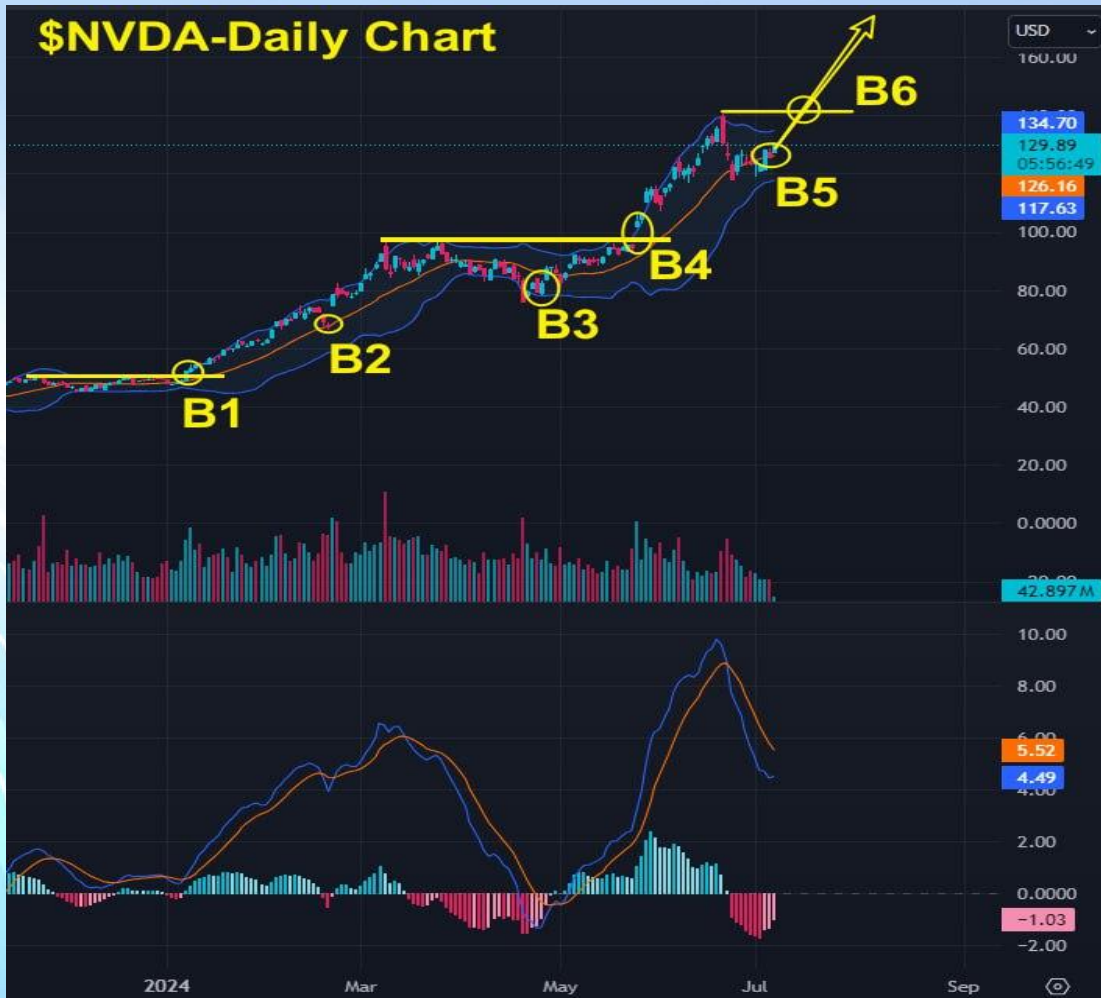

All these factors indicate that the global economy is entering a new growth cycle, with the stock market poised to be the biggest beneficiary. As I predicted last week, the SPX index is set to rise to 6000 points this year and further ascend to 7000 points next year!

Therefore, friends, now is our prime opportunity to buy in at the

FB Finance Institute - 15th Session

bottom! Do not hesitate—immediately increase your stock holdings and join me in capitalizing on this grand wealth opportunity!

Dear Friends, are you ready for a new wave of stock market euphoria? This upcoming rise in indices will be driven by two major forces: the first being the tech giants!

Led by \$NVDA, these tech giants exhibit stable earnings growth, acting as the locomotive for the stock market's ascent. Last Friday, I shared with you the confirmation of a retracement buying opportunity for \$NVDA and predicted the next buying point: when the price decisively breaks through \$140.76! Capitalizing on this tech rally will yield substantial returns.

The second driving force is the banking stocks! This week, the banking sector will kick off the earnings season, with 18 months of positive factors poised to converge: the Federal Reserve's rate cuts will lower financing costs for banks; economic expansion will boost loan growth; and bank buybacks and dividends will return excess capital. These elements will propel banking stocks' performance and serve as a new impetus for the stock market's rise.

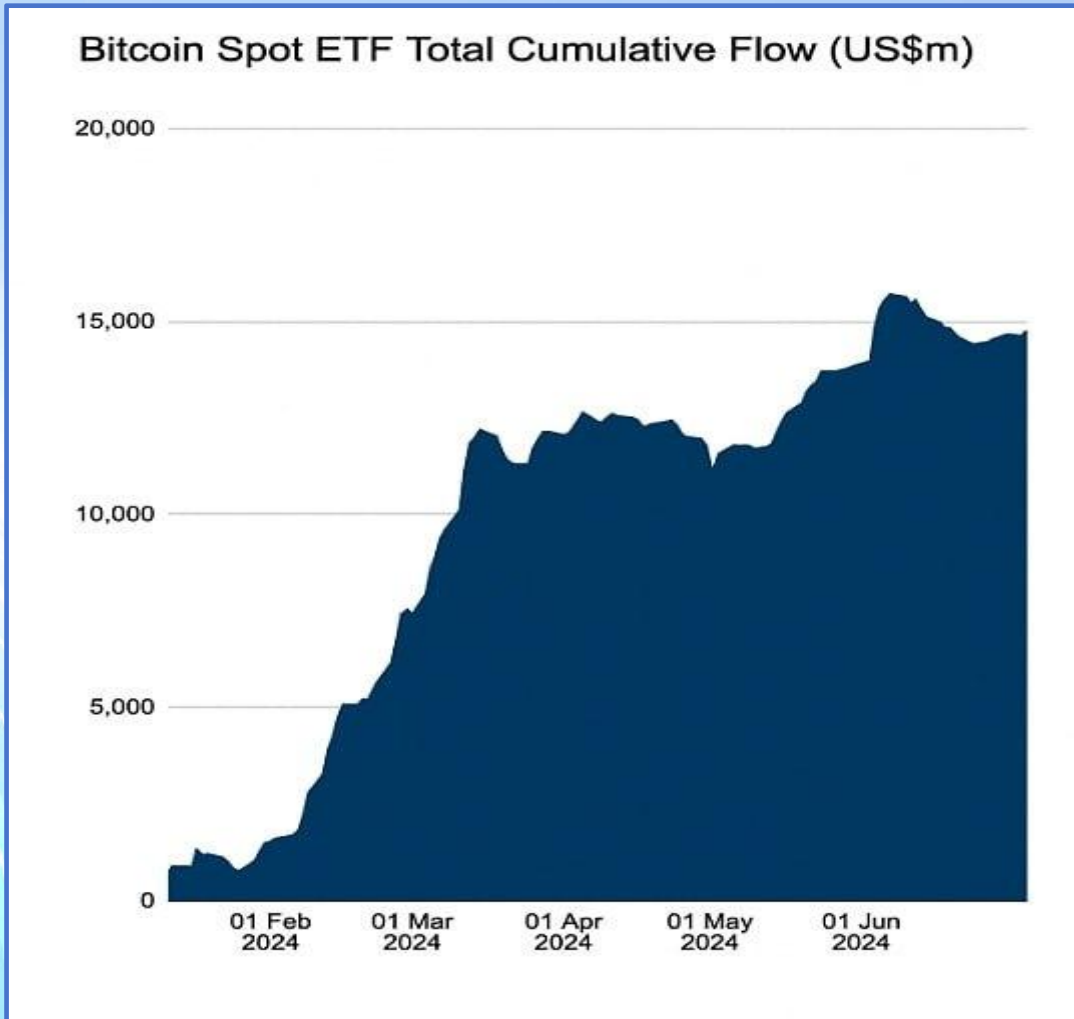

Moreover, last week's stock option strategies have achieved an impressive cumulative return of over 400%. Will we surpass this achievement again this week?

At 3:30 PM EST, Mr. Wilson will share his insights on "How

FB Finance Institute - 15th Session

Beginners Can Achieve Million-Dollar Option Strategies," helping you seize this golden opportunity in options trading!

The Spring of Cryptocurrency is Here! Investors are Making a Strong Comeback, and Leading Mining Companies are Set for a Profit Surge!

It is evident that multiple factors are driving the resurgence of the cryptocurrency market:

1. Lower interest rates favor risk assets such as Bitcoin by making traditional safe investments, like U.S. Treasury bonds, less attractive.
2. Following two consecutive days of outflows, U.S. spot Bitcoin ETFs have resumed inflows, indicating increased interest from Wall Street in Bitcoin.
3. The growth in U.S. M2 money supply may encourage investments in risk assets like Bitcoin, as returns from traditional safe investments remain relatively low.

More importantly, the decline in Bitcoin's hash rate signals that Bitcoin prices may have reached a bottom! Historically, this has led to the consolidation of mining companies, with the stronger entities gaining a larger share of profits.

The cryptocurrency mining leaders I have shared are poised to benefit from this market recovery. With robust technical

capabilities and substantial financial reserves, these companies are well-positioned to outperform competitors and secure greater profit margins in the evolving market landscape.

Dear Friends, let's focus on the daily chart of BTC, delve into the current market conditions, and uncover potential trading opportunities.

1. Bottom Rebound, Poised for Takeoff?

By observing the daily chart of BTC, we can see that the current

FB Finance Institute - 15th Session

price is near the bottom of a consolidation range.

2. Critical Support Above the Bull-Bear Line

It is noteworthy that BTC's price is currently above the bull-bear dividing line, providing strong support for a bullish rebound. This is akin to occupying advantageous terrain on the battlefield, laying the groundwork for ultimate victory.

3. Long Lower Shadow Predicting a Rise?

Looking back at past movements, we find that last Friday, BTC showed a candlestick with a long lower shadow. Coincidentally, a similar pattern appeared in May, followed by a strong rebound and a 26% rise in price. History tends to repeat itself, highlighting the significant value of this long lower shadow!

4. MACD Histogram: Bearish Forces Weakening?

From a technical perspective, the MACD Histogram is gradually shrinking, indicating that bearish forces are weakening and negative factors are being gradually absorbed by the market.

Based on this analysis, we have good reason to believe that the BTC market is in the early stages of a bottom rebound. This presents an excellent buying opportunity for value investors!

For some beginners, professional terms such as support lines and MACD may be unfamiliar. Are you still troubled by investment decisions? Hesitant due to a lack of professional knowledge? Join us, and all your concerns will be resolved!

As the internal testing plan for the Ai4.0 investment system application is set to launch this month, we are experiencing unprecedented numbers of participants, expert instructors, and comprehensive course structures. Moreover, July is our Super Benefits Month!

To express our gratitude for the support of our valued investors, make an appointment through the business card of my assistant in the pinned group information and enjoy three exclusive gifts:

1. Free three month usage of Ai4.0 Personal Edition, valued at \$12,500!

FB Finance Institute - 15th Session

2. Enter a raffle to win prizes worth up to \$5,000, including highly valuable Institute tokens.
3. Receive a classic investment book to enhance your investment wisdom!

In addition, we are excited to announce the grand commencement of the next Chief Practical Instructor selection event! The rules are as follows:

1. Cast two votes each day to support your favored instructor. The event runs until December 24, 2024.
2. The instructor with the highest number of votes will become the next Chief Instructor and receive a \$10 million cash reward along with Board of Directors honors.
3. The runner-up, if their votes exceed 2 million, will be awarded the honor of Advisory Board membership.
4. All participating voters will have the chance to receive classic investment strategies, seminar invitations, and one year of free access to the Ai4.0 Institutional Edition (valued at \$1 million).

The Showdown of Elite Instructors: An Investment Feast is About to Begin!

Practical experience is always the best teacher! This term, two seasoned instructors—Options Wizard and Crypto Shark—will join me to bring you a comprehensive course system covering stocks, stock options, cryptocurrencies, bonds, ETFs, and more across various investment markets.

The "Options Wizard," who led numerous students to achieve approximately 60-fold returns in 2020, has recently achieved six consecutive wins, helping dedicated students easily gain over fourfold returns. He will generously share his unique secrets, helping you quickly become a master of options trading!

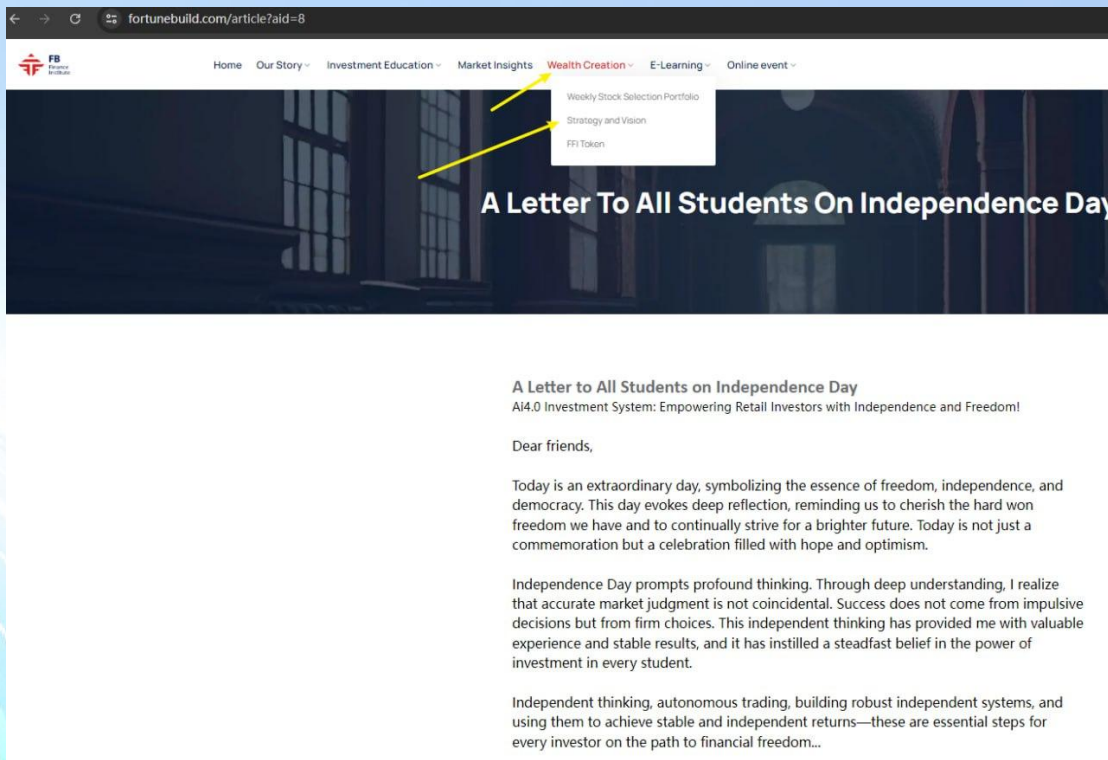

The "Crypto Shark," having achieved financial freedom through his original " α & β " trading system based on the Ai4.0 platform, will share his practical experience and introduce you to the fascinating world of cryptocurrency investment.

This week, they will engage in a fierce competition to claim the title of the next Chief Practical Instructor, starting with trading signals and strategies. Starting next Monday, they will join me in

FB Finance Institute - 15th Session

delivering exceptional courses, showcasing their profound investment skills and practical experience. In this term, you will witness three entirely different course systems.

Newcomers, you can learn about our recent plans in the "Strategy and Vision" section of our Institute's website. Now is the time to officially join this learning and investment feast!

Follow the website and vote for your favorite instructor: Your support will determine their fate, and you will have the chance to

FB Finance Institute - 15th Session

win courses worth millions of dollars!

Set your schedule for the exciting courses: At 3:30 PM ET, Options Wizard Wilson will reveal "How Beginners Can Achieve Million Dollar Options Strategies."

Engage and witness mutual growth: We will share your daily learning experiences in the community, allowing you to earn learning points to exchange for valuable gifts—such as Institute tokens—and witness your rapid growth!

Friends, follow the practical sessions and courses to explore the mysteries of investment. Ride the waves in the vast market and realize your wealth dreams!

It all starts now! Act immediately, check the group pinned information, and contact my assistant, Ms. Christie, to join us! Have a wonderful day!

Closing Commentary

Hi, everyone, I'm James Wilson. A new week has begun. What are your expectations for this week? Last week, our trading strategies were incredibly successful! Four trading days, each with an option earning over 50%. How much did you profit last week? I hope you had a wonderful weekend! I'm happy for you. So, do you want to know what new profit plans the Options Wizard has for this week? Did you buy today's stock options contract? Do you want to understand the secrets of this spread strategy? Stay tuned to my course; the excitement is about to begin!

In this term, I provided six options trading signals, with six profitable trades, maintaining a 100% win rate! This means that if you have the execution power and strictly follow the trading signals, you would have six trades, six profits, all significant! For example, last Friday, I recommended the \$AAPL stock options contract with a signal to buy directly at the opening. If you have strong execution, buying directly at the open will yield over 80% returns. If your execution is slower, buying two hours later will

still give you around 20% returns. However, if you lack execution and wait until the close, today's \$AAPL stock options contract will have dropped immediately at the open, resulting in a loss. So you see, the same trading signal yields completely different results depending on execution. Some make substantial profits, some make modest gains, and some incur losses. Reflect on the reason for this.

I must criticize some new friends for poor execution, with some even showing no execution ability and making random purchases! This is very disappointing. Friends, we are a collective, comrades in the trenches. Always trust your options commander, James Wilson. I give you the correct signal, and you provide the wrong answer. This is a great shame for a commander. We pursue not just individual profits but collective honor!

To avoid information gaps, accommodate every student's trading time, help each student reduce risks and increase returns, and for our collective benefit, I have decided to sacrifice my personal time and make the following changes to the options trading

FB Finance Institute - 15th Session

signals, rules are fixed, please strictly follow:

- Every trading day at 1 PM ET, the option code will be announced. Please follow the signal strictly.
- Trading signals will only be sent via private message. Please schedule with the assistant in advance. This ensures timely, delay free, and lag free information, allowing all students to enjoy equal treatment.

I believe everyone can manage this; after all, this is just the beginning.

To all friends making money with options trading following my strategy, I humbly ask for your vote to support me in becoming the next Chief Practical Instructor. As a token of appreciation, anyone who successfully votes can send me a screenshot to schedule a "customized" options trading strategy. These strategies include but are not limited to: "risk free stock holding strategy, value investing compound strategy, risk hedging strategy, large asset arbitrage strategy," and more. Additionally, I will teach

FB Finance Institute - 15th Session

my personal trading system—IAIDO strategy, which evolved from the Ai4.0 system. This gives you an idea of how powerful the Ai4.0 system is. So, make sure to participate in the Ai4.0 system internal testing by registering. This term will release institute tokens worth over \$10 million. This is a genuine benefit, people. Show your execution power, take action, and don't fall behind.

Now, let me share a strategy that even the legendary Warren Buffett uses: naked put selling. This strategy can serve as a long term investment approach. To facilitate your understanding, I will break down this strategy into several points for clarity. Please take notes:

1. Identify stocks suitable for long term bullish positions, such as \$NVDA, \$TSM, \$TSLA.
2. Be willing to buy these long term bullish stocks at a lower price.
3. Choose a short term option, typically a seven day cycle option.

Once these three points are addressed, a complete naked put strategy is formed. The advantage of this strategy is that it

ensures you never lose, allowing you to achieve any goal you set in the market.

Next, let me explain a case to illustrate the advantages of this strategy. The strategy is very simple, and we will use Warren Buffett's operation of \$KO (Coca-Cola) as an example:

First, the legendary investor Warren Buffett firmly believed that \$KO was a good stock with long term growth potential. At that time, the market environment was unfavorable, and \$KO's stock price was \$40. Buffett wanted to buy \$KO at \$35, and he was confident that the stock price would not drop below this level. To reduce his stock holding cost, Buffett decided to implement an options strategy. Lowering his costs would naturally increase future profits when the stock price rose. Thus, Buffett executed a naked put strategy. Here is the specific trade.

Buffett sold \$KO put options with a strike price of \$35 at \$1.50 per contract, selling a total of 3 million contracts initially, and then an additional 2 million contracts, totaling 5 million contracts.

What are the implications of this trade? If the stock price drops to \$35, he would need to buy 5 million shares of \$KO at \$35 per share, which was his goal. Since Buffett received a premium of \$1.50 per share for selling the puts, his actual cost, if exercised, would be \$33.50 per share.

When the options expired, \$KO's stock price did not fall below \$35, so the 5 million option contracts were not exercised. Buffett earned \$7.5 million from this strategy. Let's review the risks Buffett took to earn this \$7.5 million.

1. If the stock price rose, Buffett's options would profit.
2. If the stock price stayed flat, Buffett's options would profit.
3. If the stock price fell below \$35, Buffett would happily buy more shares at a discount, and the options would still profit.

So, what is the risk? Some might be confused, thinking Buffett made \$7.5 million without any risk. Don't worry, the Options Wizard is here to clarify this for you.

The core logic of the naked put strategy is simple: you already

want to buy the stock. In other words, someone is paying you to buy the stock you desire. Let me give you an example:

Recently, \$TSLA has been on a continuous rise, and our options trade on \$TSLA last week was highly profitable. Its current stock price is \$251. For such a unique and core concept, its market cap is only \$800 billion. If humanoid robots come out, its market cap could easily surpass \$3 trillion. In other words, I firmly believe that \$TSLA will double in the future.

However, at the current price of \$251, I feel it's not worth buying.

I would prefer to buy it at \$230. So, I can sell a large number of put options with a strike price of \$230, allowing me to buy \$TSLA at \$230. There are only two possible outcomes:

1. The stock price rises or stays flat, not reaching my target price. I don't buy the stock, but my options still profit. I can repeat this process, continuously earning the option premium.
2. The stock price drops, allowing me to buy \$TSLA at my desired price of \$230. I happily hold the stock and still collect the option premium, achieving the best of both worlds.

How about that? Simple, isn't it? Have you learned it? Here's a quick update: Congratulations, everyone! Our seventh options trade has also made a profit! Currently, the profit exceeds 10%. How does that sound? Do you want to learn more options strategies with me? Then please vote for me, supporting my bid to become the next Chief Practical Instructor. Successful voters can contact me for more surprises.

Tomorrow morning, my esteemed competitor, the Crypto Shark,

FB Finance Institute - 15th Session

will take the stage! The cryptocurrency market has adjusted to a low point, and I am eager to see the exciting trading strategies he will present. Let's look forward to it together!

Interactive Q&A for This Session:

1. Why did Professor Clark point out that now is an excellent time for value investors to participate in cryptocurrencies and beneficiary stocks?
 2. Do you understand the naked put strategy? What is its core? How many times have we profited so far? What is our success rate?
