

Morning Review

AI4.0
FUTURE LEADERS
200% PROFIT CHALLENGE PLAN!

- 1** Achieve an 200% Return on Total Assets in Just 7 Days!
- 2** Follow the Rules Strictly, and We Cover Any Losses!
- 3** Customized Investment Plans to Help You Quickly Become an Investment Leader!

The advertisement features a central image of a hand in a blue glove holding a large gold Bitcoin. Surrounding the Bitcoin are various other cryptocurrencies, including Monero (M) and Cardano (A), and a background of a candlestick chart and falling gold coins.

Dear friends, family members, and esteemed future investment masters, good morning!

Yesterday, I shared an important letter with you all, and I hope you had the chance to read it. After delving into your feedback, I deeply feel your enthusiasm for the cryptocurrency market, your determination to achieve stable and extraordinary returns, and your aspirations for a better future.

Despite my very tight schedule and the limited precious time I have with my family, your passion has truly inspired me. This experience has touched me deeply, even more so than my growth and challenges following the 2008 financial crisis. This time, I am resolute in my decision to act!

With the upcoming global Bitcoin conference and the immense potential of the cryptocurrency market, we cannot afford to miss this precious opportunity to change the destinies of our families for generations. Therefore, I have decided to launch the "Ai4.0 - Future Leaders - 200% Profit Challenge Plan" without hesitation.

FB Finance Institute - 15th Session

The key now is how to optimize our investment portfolio, how to quickly participate in this plan, and how to successfully achieve extraordinary returns. These will be the crucial topics I will share with you today.

I may announce the first trading signal at any moment, so if you haven't joined our exclusive trading signal group yet, please message me or my assistant immediately! Let's embrace this challenge together and start a new chapter in our investment journey!

To ensure every participant is fully committed, I have set a clear minimum entry threshold of \$5,000. This not only tests the seriousness of the participants but also ensures that we can maximize the use of team resources. The core of our plan is an ambitious goal—to achieve a 200% total asset return in just one week.

If you haven't joined us yet, there's still an opportunity. This is a new starting point for us to grow together, become leaders, and achieve our dreams. It is an honor for me to fight alongside you!

Let's first understand the key market environment factors that are crucial for our investment decisions:

Firstly, regarding the stock market, the optimism among institutions about market returns has diminished. Increased corporate debt and geopolitical risks have impacted the indices. For example, Alphabet Inc.'s earnings announcement has raised concerns about the speed of returns on AI investments. Additionally, news from companies like Southwest Airlines Co., United Parcel Service Inc., and Whirlpool Corp. has sparked

FB Finance Institute - 15th Session

concerns about potential declines in consumer spending. On the other hand, the earnings reports of major companies such as Microsoft, Meta Platforms, Amazon, and Apple continue to be the market's focal points, further intensifying market risk levels.

Secondly, for indices like SPX, the daily chart shows that the Bollinger Bands are currently in a sideways pattern. Last week's trading volume did not show significant growth, indicating that buying power has not notably increased, suggesting that the market may continue to oscillate.

In such a market environment, we need to be more cautious in formulating and executing our investment strategies to ensure we find the best balance between high risk and high returns.

This market atmosphere is also the core reason why our heavily held cryptocurrency beneficiary stocks have not experienced significant gains. However, the global cryptocurrency conference has injected even more favorable factors into this market than the Bitcoin spot ETF introduction earlier this year.

U.S. Republican Senator Cynthia Lummis has stated that she is pushing a proposal for the U.S. Treasury to purchase 1 million bitcoins within five years. Republican presidential candidate Donald Trump emphasized that he will remove the current SEC chairman and establish a Bitcoin strategic reserve.

Here are the key points from Donald Trump's speech that I recorded:

- Bitcoin is like the steel industry a hundred years ago. I believe Bitcoin is still in its early stages. Bitcoin's market value might surpass gold, and given the current situation, this seems very likely.
- Ensuring that the U.S. becomes the global capital of cryptocurrency and the world's biggest Bitcoin nation.
- The left opposes Bitcoin, strongly opposes it. Bitcoin enthusiasts recognized the dangers of inflation far earlier than most people.
- The U.S. will become richer due to Bitcoin, the world will become better, billions of people will be included in the crypto economy, and they will save in Bitcoin. This is a fact.
- If I am elected president, this will be one of my policies: the U.S.

government will retain 100% of its current Bitcoin holdings as part of the final plan introduced by the U.S. government.

...

While we cannot ignore the stock market in the long term (it is our main battlefield), tactically shifting focus to the cryptocurrency market and related beneficial directions has become a necessary choice. I am closely monitoring market signals and will issue trading tips at any time. Please continue to pay attention to important information in this group!

Dear friends, although no one can control market fluctuations, we are firmly moving in a more favorable direction! When Bitcoin was at \$57,866.45 (on the 11th) and \$64,617.99 (on the 17th), "Shark" accurately identified retest buy points. We actively positioned ourselves for related opportunities, such as the institute token and beneficiary stocks, and have achieved significant interim victories! I firmly believe that increasing investments in cryptocurrencies or adjusting our investment focus

FB Finance Institute - 15th Session

is a rational decision!

The launch of the "Ai4.0 - Future Leaders - 200% Profit Challenge Plan" has received widespread recognition and support. Now, let's explore how to maximize the benefits of this plan:

Suggestion 1: Deeply understand the six core meanings of the plan. This is not only the original intention behind creating the plan but also the key to our future success. These concepts will help us tackle challenges in investment, enjoy the process, and make each day more meaningful.

Suggestion 2: By participating in this plan, you can gain significant investment returns and enjoy unique benefits before the Ai4.0 system is officially launched. We hope you will become a supporter, achieving mutual benefit and win-win results, as we stride towards greater success together!

Suggestion 3: Seize the opportunity while it lasts. Since this is the best direction for profit, do not miss this chance. I believe the

FB Finance Institute - 15th Session

minimum entry threshold of \$5,000 is attainable for everyone. This ensures that you take the process and results more seriously and motivates our team to pursue excellence and take on responsibilities.

Suggestion 4: Increasing your investment is not a bad thing, as long as it does not affect your standard of living.

The goal of this plan is to improve our lives. If your financial situation allows, you can tailor a more optimized investment plan based on your circumstances. Feel free to message me directly. We hope to connect with more like minded and capable friends to achieve greater accomplishments together!

Suggestion 5: View the current profit plan as an opportunity to embark on the path of becoming a professional investor.

Therefore, we need to manage our emotions, avoid arrogance and impulsiveness, and maintain humility and openness. Learn from capable friends around you and quickly become an expert! For example, the "Wizard's" goal of 20 consecutive wins and the "Shark's" highly stable α & β course system with its four strategies

are your quick improvement tools. We promise to take full responsibility for any losses if you strictly follow our trading signals!

Suggestion 6: Pay attention to this week's non-farm payrolls data release.

More and more investors expect the Federal Reserve to make two rate cuts this year, which will bring new opportunities to the market. This week's non-farm payrolls data will play a key role and may present significant contract trading opportunities. I recommend that everyone be fully prepared!

Suggestion 7: Build a wealth matrix and use fixed-income investments to help consolidate profits. While pursuing high returns, we will minimize risk through Ai4.0 strategy's best risk control coefficients!

Suggestion 8: Quickly obtain the cryptocurrency pass to ensure you get on the profit express as fast as possible!

In our "Future Leaders Profit Plan," quickly acquiring cryptocurrency is the first step to success.

Earlier this month, the "Shark" provided detailed education on the different platforms and intermediary wallets (such as Trust Wallet) that cryptocurrency beginners should know about and recommended five excellent crypto applications. If you are still unfamiliar with these topics, feel free to contact him or my assistant via private message. We will be happy to answer your questions.

For those new to the cryptocurrency market, converting cash to cryptocurrency might seem challenging. However, don't worry; C2C (Customer-to-Customer) trading platforms offer a convenient way for you to easily exchange fiat currency (like USD) for cryptocurrency (like USDT).

Imagine you are a European investor interested in the vibrant cryptocurrency market. Similar to buying U.S. stocks requiring the conversion of euros to dollars, you will need to convert your fiat currency to cryptocurrency, such as USDT (a stablecoin almost

equivalent in value to the USD), BTC, or ETH.

USDT has become a mainstream medium in the cryptocurrency world due to its stability and widespread acceptance. Suppose you plan to join a potential filled profit plan but find yourself lacking USDT, the "pass" you need to participate. In that case, you only need to purchase USDT with cash to gain eligibility. At this point, C2C trading platforms will be your best partners!

I have just posted the first trading signal for this profit plan in our exclusive trading signal group. Please follow it strictly. However, to avoid disrupting the upcoming sharing session, please refrain from posting your position screenshots for now. Stay tuned to this group; I will notify everyone before closing any positions!

Let's continue with the sharing, so please pay close attention.

The process of exchanging (purchasing) USDT is simple and straightforward, just like buying and selling goods in a market.

Through C2C, you can easily convert your cash into the "golden

key" of the cryptocurrency market—USDT—allowing you to smoothly enter this exciting investment field.

C2C in the cryptocurrency market typically refers to ‘Customer to Customer’ or ‘Consumer to Consumer’ transactions, i.e., person to person transactions. C2C trading is the perfect embodiment of the decentralized spirit of cryptocurrencies. Its main benefits include eliminating high fees from traditional financial intermediaries, better privacy protection, more flexibility and convenience in transactions, and providing easy access to financial services for investors who might otherwise find it difficult.

In short, C2C is the free market of the cryptocurrency world, allowing everyone to be both buyers and sellers.

How C2C works:

Imagine that C2C trading is as simple as exchanging currency at a money exchange point while traveling. Here, you are buying and selling cryptocurrencies like USDT with cash. Each time you

complete a transaction with someone else, the price difference is how the exchange earns its profit.

For the sake of transaction security and smoothness, C2C trading platforms require every participating merchant to deposit a significant security bond. This is a safeguard to ensure the reliability of transactions and the integrity of merchants.

The trading center carefully selects a merchant alliance with active trading, high user ratings, and the best exchange rates for users, ensuring that each of your exchanges is the most economical and safest.

If you still feel unfamiliar with this process, don't worry. The offline customer service at the trading center acts like your personal guide or financial advisor, always ready to help you find the most suitable exchange merchant and answer your questions, ensuring your exchange journey is both smooth and safe.

Beginners can directly seek help from my assistant.

The C2C trading is considered highly secure for several key reasons worth understanding and trusting.

Firstly, quality merchants participating in such transactions are required to deposit a significant security bond with the trading center. This measure ensures their strict regulation and provides a high degree of security and reliability for transactions. This not only demonstrates their legal and ethical commitment but also ensures they provide quality service to customers.

Secondly, C2C trading platforms are subject to strict regulation, such as oversight by the U.S. Financial Crimes Enforcement Network (FinCEN). This regulation covers areas including money services, cryptocurrency transactions, ICO issuance, and more, ensuring the legal operation and safety of the trading platform. In our country, the FBI has repeatedly advised companies engaged in related businesses to obtain an MSB license, which is also an important marker for investors to identify legally operating platforms.

Additionally, for derivative products like options, the NFA financial licenses held by CPO and CTA operators further reinforce their legality and safety under the supervision of the National Futures

Association. They continue to upgrade various products and services.

You can check these key details in the "Academy" section on the application's homepage.

In summary, although C2C trading is directly aimed at individuals, its stringent regulatory framework and security mechanisms make it a safe and efficient investment choice.

Ai4.0 - Future Leaders - 200% Profit Challenge Plan							
Achieve an 200% Return on Total Assets in Just 7 Days! Follow the Rules Strictly, and We Cover Any Losses! Customized Investment Plans to Help You Quickly Become an Investment Leader!							
Date	Transaction Type	Total Amount Invested	Profit Ratio	Average P&L	Cumulative Return Rate	Total Assets Growth	Total Assets Compound Growth Rate
7/28/2024	—	—	—	—	—	\$5,000.00	0.00%

Important note:

We have already achieved good profits from the recent trade.

Please pay attention to and follow the signal for closing the position!

Dear friends, congratulations on achieving a solid return in our

FB Finance Institute - 15th Session

first battle.

Due to time constraints, today's sharing will be brief. Let's remember today's trading patterns, and I will reinforce these practical techniques in conjunction with the Ai4.0 course in the future.

Next, I have some important instructions to convey:

1. Please purchase a 7-day fixed income product and allocate 50% of the profit from this trade to it. You can find it by clicking on the "Finance" menu on the homepage and then selecting "Fixed".
2. If you missed the previous trading signal, please contact my assistant immediately. She will help you quickly get in touch with the trading center's customer service or C2C representative to join our profit plan promptly. Trust my decision and act quickly to avoid missing more opportunities.
3. If you are ready, please send your recharge screenshot to this

FB Finance Institute - 15th Session

group or privately to my assistant. She will check and ensure you do not miss the next trading signal, which may appear at any time!

4. Please share the profit status from the recent trade in text form so we can all share in your joy!

Lastly, pay special attention to Mr. Wilson's session at 3:30 PM ET. His "20 consecutive wins" is not just a declaration but a promise realized. He will share his portfolio strategies and more straightforward, practical tips to help us achieve greater success together. Have a pleasant day.

AI 4.0

Closing Commentary

Hey, everyone, good afternoon! I'm James Wilson. A big thank you to Professor Clark for his brilliant morning session. I'm sure everyone feels invigorated by today's content! That's right, Professor Clark has introduced the "AI4.0 - Future Leaders - 200%

FB Finance Institute - 15th Session

Profit Challenge Plan." The current stock market is like a fluctuating yo-yo, making it hard to find opportunities. This profit plan is fantastic news for ordinary traders, helping us navigate bull and bear markets to achieve profits against the trend! I will also leverage my 20 consecutive wins to help you reach extremely high return targets. In today's session, I will focus on market dynamics and provide real time signals for the 20 consecutive wins strategy!

This 20 consecutive wins signal is a personal plan designed to compete with "Crypto Shark" Mr. Richard Bill for the Chief Practical Instructor position, including stock options contracts and cryptocurrency contracts. In short, trading contracts can accelerate our profit pace and increase our returns, making contracts the better choice right now! Please have your accounts ready and contact me in advance to ensure you don't miss any trading signals! Additionally, please support me by voting. Your enthusiastic support is my driving force!

Do you remember my strategy analysis from last week? At that

FB Finance Institute - 15th Session

time, I determined that the Nasdaq and S&P 500 indices had entered the oversold zone according to technical indicators and were about to rebound. However, today's rebound is still too weak, indicating that market funds are very cautious. Why is that?

Last week's stock market decline can partly be attributed to Google and Tesla's earnings reports falling short of expectations, which sparked investor concerns and led to consecutive plunges. This week is set to be exciting, with star stocks taking the stage. Tech giants with a combined market value of over \$10 trillion will release their earnings reports collectively. This could potentially deliver a "heavy blow" to the market because no one knows if these tech giants' earnings will meet market expectations. Consequently, the funds remaining in the stock market are like the Sword of Damocles hanging over investors' heads—a sharp sword suspended by a thin strand of hair, always threatening to fall. Smart money will not choose to trade at this time; they are all waiting for certain opportunities.

Therefore, I fully agree with the professor's view—retain quality

stocks and sell off those that are not worth holding. You can use these assets to participate in my 20 consecutive wins! All you need to do is vote for me and prepare your trading accounts!

For the first signal in our 20 consecutive wins, I will choose cryptocurrency contract trading, especially at this moment. I don't want my supporting students to take risks in the stock market. Although we Americans inherently possess a spirit of adventure, I prefer seizing certain opportunities! I relish the feeling of a sure victory—it's truly fantastic! Cryptocurrencies are also fantastic right now! Presidential candidate Trump's

passionate speech at the Bitcoin conference has ushered in a new era for America's 50 million cryptocurrency holders. Let's take a look at the key points from Trump's speech at the Bitcoin conference:

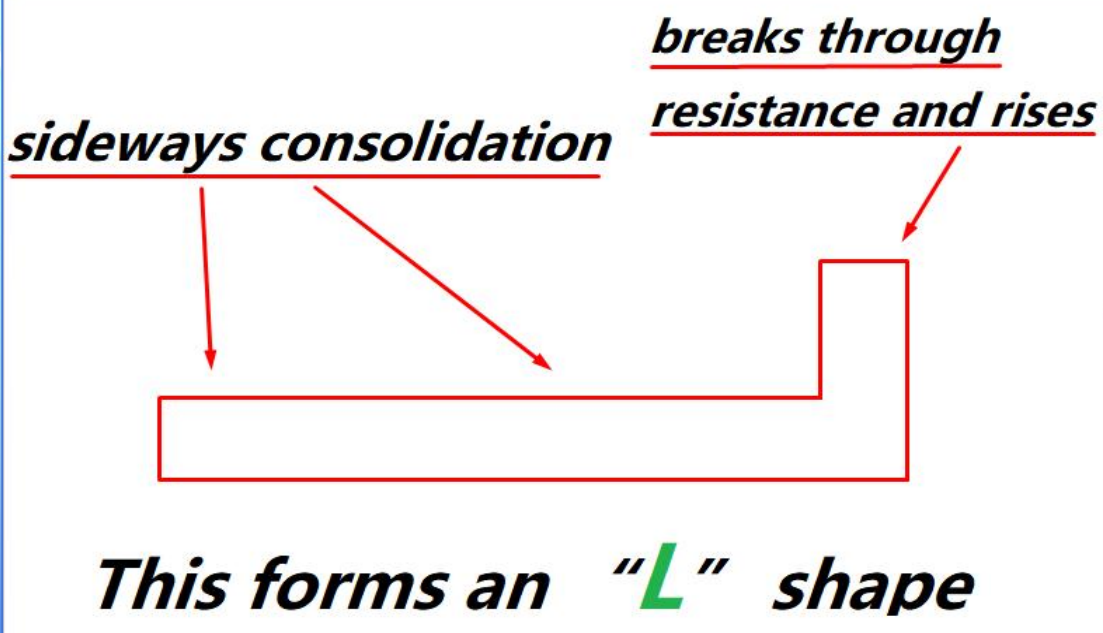

- Fire Gary Gensler and stop the persecution of the crypto industry.
- Preserve all Bitcoin related jobs and support the development of Bitcoin.
- Implement a plan to make America a Bitcoin superpower.
- Maintain strategic Bitcoin reserves, retaining all government held Bitcoin.
- Ensure Bitcoin becomes the world's number one asset, surpassing gold and silver.

Bitcoin has already reached a high of \$70,079 in this round of the bull market and is poised to go even higher. The bull market trend will continue. However, purebred Bitcoin beneficiary stocks are still hovering at their original levels. What does this mean? It indicates that smart money has flowed into the cryptocurrency market. Smart money understands the principle that "true

experts earn from their knowledge."

So, after selling off our trash stocks, how should we seize the 20 consecutive wins? What constitutes certain opportunities?

In our last session, we discussed the L-pattern, which is a strong buy signal whenever it appears. As shown in the example, after the L-pattern appeared, the market maintained an upward trend, allowing us to easily achieve high profits using contracts.

Today, I will explain the V-shaped reversal pattern, another classic bullish pattern that is even more suitable for cryptocurrency contract trading. A V-shaped reversal typically indicates a possible market shift from a downtrend to an uptrend. Once a V-shaped pattern is established, it is highly likely to buy at the lowest point

of an upcoming bullish trend.

Characteristics of the V-Pattern (Refer to the Example Below):

V-Shape Bottom: The price forms a V-shaped bottom, characterized by a rapid decline to a low point, creating a clear bottom, followed by a swift reversal and an upward move.

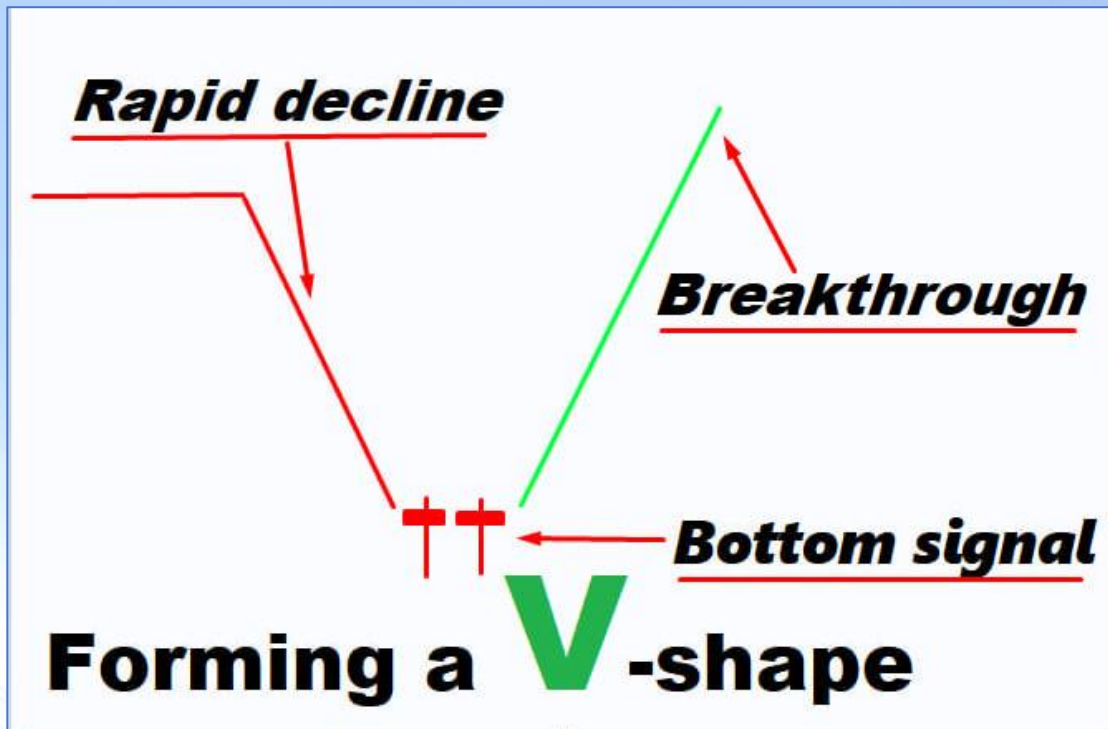

V-Pattern Trait: The V-bottom is usually accompanied by an increase in trading volume, indicating strong interest from market participants in the price reversal. As more participants join, it often triggers a new upward trend.

V-Pattern Cycle: The V-shaped reversal pattern forms within a short period, reflecting the market's quick response and shift, emphasizing changes in market sentiment and liquidity.

V-Pattern Breakout: When the price breaks through the upward trendline from the V-bottom, it signifies a full reversal of the trend. The V-bottom marks the lowest point in this cycle.

FB Finance Institute

Practical Analysis: A V-shaped reversal pattern is a buy signal because it indicates the start of a trend reversal from bearish to bullish. Once the selling pressure is exhausted, the buying force

FB Finance Institute - 15th Session

begins to take over. The V-shaped reversal pattern is particularly suitable for short term intraday trading. By leveraging this pattern, you can capture the perfect main upward trend of a bull market.

As shown in the chart, the price experiences a sustained drop, reaching a low point and forming a bottom signal. Subsequently, the bears and bulls switch roles, the price begins to reverse and rise, and eventually breaks through the resistance zone. Let's see what interesting phenomena occur in the subsequent movements.

Afterward, the price soared, ushering in a perfect bottom reversal trend, buying at the lowest point of a new market cycle. It's worth noting that the V-shaped reversal pattern can be observed not only in candlestick charts but also in time share charts. Chart 2 shows a stock we traded before. Can you recall which option code this was? At that time, we successfully leveraged the V-shaped pattern to earn substantial profits, buying at the lowest point!

In my 20 consecutive wins strategy, I will also use these technical

patterns to capture opportunities in cryptocurrency contracts.
Once the pattern appears, we will buy in directly!

Ai4.0 - Future Leaders - 200% Profit Challenge Plan							
Achieve an 200% Return on Total Assets in Just 7 Days! Follow the Rules Strictly, and We Cover Any Losses! Customized Investment Plans to Help You Quickly Become an Investment Leader!							
Date	Transaction Type	Total Amount Invested	Profit Ratio	Average P&L	Cumulative Return Rate	Total Assets Growth	Total Assets Compound Growth Rate
7/28/2024	---	---	---	---	---	\$5,000.00	0.00%
7/29/2024	Platform's native token - 100X	\$500	110%	\$550	100%	\$5,550.00	11.00%
	Platform's native token - 100K	\$500	130%	\$650	230%	\$6,200.00	24.00%

Great News!

We have just successfully closed the latest trade with a profit! Congratulations to all the excellent students who followed the trading signal! This is the second trade in our profit plan and the first in our 20 consecutive wins strategy! By using 10% of our position, we achieved a 13% return on total assets! Throughout the day, we executed two trades, with a total return of 24%! This is truly exciting!

From the chart, we can see that the appearance of the L-pattern usually indicates that bullish forces are about to take control. We

decisively used 10% of our position to buy long contracts. As the price continued to rise, we achieved a total profit of 130%! The advantage of this trading strategy is that the larger the capital, the higher the profit, and the lower the risk.

If you use \$200,000 and follow my 20 consecutive wins trading signals, investing 10% of your position each time, and each trade yields 50% to 150% profit, what do you think the result will be after completing 20 consecutive successful trades using the compound interest model? Additionally, this trading frequency is higher than stock options signals, making it even more exciting, right? To follow my 20 consecutive wins trading signals, I have three requirements:

1. Vote and support me in becoming the next Chief Practical Instructor. This is my goal, and I will give it my all!
2. I recommend those interested in the 20 consecutive wins strategy to use large funds with the compound interest model for trading. This not only reduces risk but also maximizes operational effectiveness, allowing you to seize more trading opportunities.

3. Invest in Fixed-Income Products: Allocate 50% of the profits from this trade to purchase fixed-income products with a 7day term. This helps preserve your capital strength, preparing for the next signal.

Today's Interactive Q&A:

1. Did you capture both trading signals today? How much profit did you earn in total?
 2. C2C is a major fund flow method in the cryptocurrency market. Have you understood its logic, security, and convenience?
 3. What are the main reasons for the sudden increase in the difficulty of short term operations in the stock market? Do you think the "Future Leaders 200% Profit Plan" is a good opportunity to optimize your investment portfolio?
 4. By following the 20 consecutive wins plan and trading through contracts, what do you expect to achieve? How do you plan to act?
-
