Dear friends, family, and esteemed future investment masters, good morning!

This week, our "Ai 4.0 - Future Leaders - 200% Profit Challenge Plan" is showing exhilarating results: four trades, all successful with stable returns, and a total asset return rate of 49%! This is not only an extraordinary achievement but also a vivid demonstration of our teamwork and strategy execution. Such a strong performance not only allows us to maintain stability amidst market fluctuations but also serves as an important milestone on our journey forward.

**FB Finance Institute - 15th Session**

At this rate of capital growth, we are on track to achieve our original target in 6 days. Will we succeed? That depends on our continued efforts—let's keep pushing forward together.

If you feel anxious or frustrated by the fluctuations in the stock market, remember that we offer one on one emergency hedging strategies at any time, helping you quickly turn the situation around and achieve double returns!

Today, we will delve into the short term impact of ADP data on the market, as well as the potential changes currently brewing in BTC. The fifth trading signal will be released at any moment, and we are confident it will bring us another round of substantial profits. In the latest practical course, we will focus on key points that will help you advance further on your investment journey.

The recently released ADP employment report shows that the U.S. private sector added 122,000 jobs, marking the fourth consecutive month of decline and reaching a new low since February of this year. This figure is well below economists'

expectations of 147,000 and falls short of June's revised 155,000.

This data is not only noteworthy but also highly significant due to its forward looking nature. ADP figures are often regarded as a leading indicator for non-farm payroll data, with implications that extend beyond the investment market, directly influencing economic growth and inflationary pressures.

Firstly, this data is bearish for the U.S. dollar, while being favorable for stock indices, cryptocurrencies, and the gold and oil markets. The stock market may experience a slowdown as a result, providing a strategic window for investors to actively adjust their positions, take profits at highs, and optimize their portfolios.

Secondly, the ADP data reflects a trend of slowing hiring, with the unemployment rate climbing steadily in recent months and an increasing number of people applying for unemployment benefits. In this context, we have reason to anticipate that the forthcoming non-farm payroll data may provide further favorable evidence and opportunities for our current trades.

Therefore, my confidence in achieving 300% profit in one trade by the end of this week is even stronger. This opportunity is not only our most important trading plan of the week but also a test of our team's ability to keenly capture opportunities amidst market changes. Let us act together, seize this unique moment, and accelerate the realization of our investment goals!

Yesterday, a friend asked me privately: With the bull market so clearly established, why hasn't BTC risen yet? Is this a good or bad sign?

Next, I will share my views by discussing three aspects: "Reasons Why BTC Hasn't Risen," "BTC's Penetration Rate," and "The Strongest Adjustment Patterns." During this discussion, I will also release trading signals based on Ai 4.0 system strategy prompts, so please keep a close watch on the group messages.

Let's take a step back to 2010 or early 2011, when BTC was priced at less than \$1. Suppose Mr. M easily bought 5,000 BTC for \$5,000 or acquired them through mining.

With the advent of the massive bull market in June 2011, BTC's price surged past \$30. Most people, driven by the temptation of profits, would rush to sell 90% of their holdings, or 4,500 BTC. Mr. M, however, wisely retained 10% of his holdings, or 500 BTC.

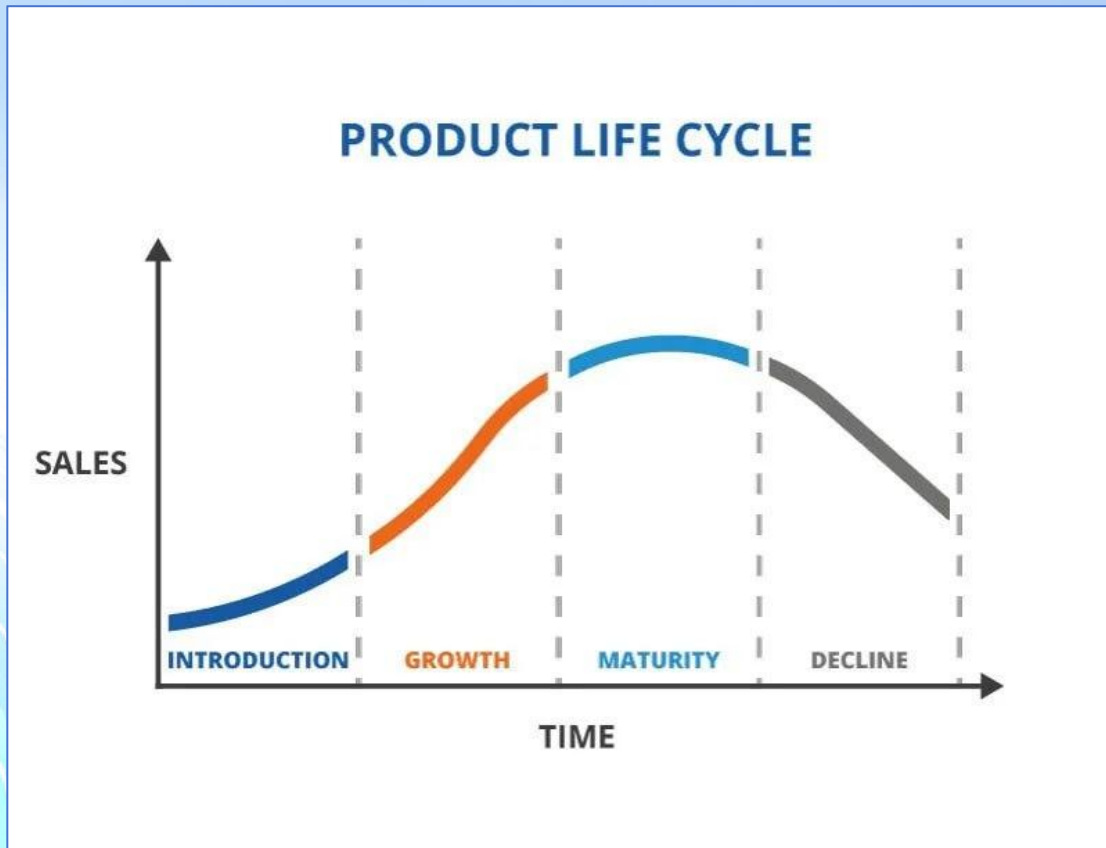

By the end of 2013, BTC's price soared again to \$1,200, and the 500 BTC, which had been forgotten, suddenly regained attention. Mr. M hurriedly searched through his books at home and found the one where he had written down his private key years ago. He updated his application, entered the private key, and discovered the 500 BTC were still there! Relieved, he might have cashed out 90% of the profits again, leaving himself with 50 BTC.

This pattern might have continued:

- At the end of 2017, when BTC's price approached \$20,000, Mr. M sold 45 BTC for \$800,000 in profits, leaving 5 BTC valued at \$150,000.
- In 2021, as BTC's price surged to \$60,000, he sold most of his BTC, profiting \$225,000, and kept 0.5 BTC as a memento.

By 2024, BTC's price reached a new all-time high of \$74,000. The remaining 0.5 BTC is now worth \$33,000, but had he held on to the original 5,000 BTC, they might now be worth \$330 million.

This story reveals aspects of human nature and provides insight into the current lack of upward movement in BTC. Therefore, it is the bull market itself that is the main culprit behind the reduction in the average investor's BTC holdings!

Every product typically goes through four stages: introduction, growth, maturity, and decline. However, BTC is theoretically unlikely to follow this pattern due to its inherent physical limits, which suggest it will only become more valuable over time.

The halving mechanism in BTC mining significantly slows the rate at which new BTC enters the market, while global demand for Bitcoin continues to rise. This sharp reduction in supply, coupled with increasing demand, inevitably drives up BTC's price. In economics, the relationship between supply and demand is the core determinant of price fluctuations, and BTC's decreasing supply and increasing demand create conditions for its value to grow.

Looking ahead, BTC is not just an investment tool but also a pioneer leading the transformation of the future financial system. As market awareness and acceptance of BTC grow, more and more investors are choosing to hold rather than sell Bitcoin, further enhancing its scarcity effect and positively impacting its value. This trend not only commands attention but also

underscores BTC's historic role in financial innovation.

We are living in an era full of passion and infinite possibilities, where the future of BTC not only promises substantial returns for investors but also has the potential to completely reshape the financial world. As witnesses and participants in this historic transformation, let us embrace the challenges and opportunities of this new era together!

Dear friends and future investment masters, as we examine the chart showing the proportion of Bitcoin users relative to the

**FB Finance Institute - 15th Session**

global population, we not only see the development trajectory over the past 15 years but also anticipate the potential growth in the future. The red line depicts Bitcoin's historical journey, while the green line, based on the development pattern of innovation adoption rates, outlines the future trend of user growth.

What is astonishing is that, despite Bitcoin having secured a place among the top ten global assets by market capitalization, only 0.35% of the global population has been exposed to BTC. This figure not only highlights the immense potential for Bitcoin's future global adoption and growth but also indicates the vast market expansion opportunities ahead.

Thus, personally participating in, experiencing, and witnessing the explosive growth brought about by this epoch making technological innovation is an exceedingly rare opportunity for our generation. We are fortunate to see billions of people around the world benefit from this technology, while actively participating and writing our own history, witnessing the birth of a new era. Therefore, when your comprehension falls short, you

**FB Finance Institute - 15th Session**

are not worthy of immense wealth, just like most people who, as I mentioned earlier, are akin to Mr. M in the story!

In trading, we rarely encounter a pattern where the upper Bollinger Bands moves sideways while the middle and lower bands continue to move upward. This indicates that the price is in an adjustment phase. If the price is in a long term uptrend, this pattern suggests a strong correction within the uptrend. Once the

adjustment is complete, the price is likely to continue its original trend.

**As shown in the chart, the trading secrets are as follows:**

## 1. Going Long

1.1 When the price is near the upper Bollinger Bands, consider reducing your position.

1.2 You may also choose to hold your position and add to it when the price retraces to the middle band, such as at buying points B1, B3, B4.

1.3 If the price breaks below the middle band, it's advisable to wait and observe; if the price breaks above the middle band again, you can buy, as at buying points B2, B5.

1.4 A strong breakout above the upper band can be treated as an acceleration of the trend, with the breakout moment serving as a buying point, such as at buying point B6.

## 2. Short Selling

The situation is just the opposite.

Currently, BTC's daily chart is likely to exhibit a similar pattern. The story I just shared reflects the experience of most people, but for those aiming to achieve financial freedom through the cryptocurrency market, it might serve as a cautionary tale!

BTC is presently in a confirmed bull market and in a typical uptrend. Although it is facing selling pressure, the anticipated breakout makes us optimistic. We are at the cusp of the most profitable phase, so I encourage everyone to actively position themselves. Now is the perfect time to join the "Ai 4.0 - Future Leaders - 200% Profit Challenge Plan"!

Today, I shared the latest trading signal in the trading signal group. Please execute the trades strictly according to the signals provided!

The strong performance of the ADP data has instilled significant confidence in the market, and this Friday's non-farm payroll report will be the main focus. The market sentiment is beginning to heat up, and we expect market volatility to increase

**FB Finance Institute - 15th Session**

significantly, presenting us with opportunities for exceptional profits.

**How can we quickly achieve this week's target of a 200% total asset return? Let me explain from two perspectives:**

Firstly, profit. In such a favorable market environment, increasing your investment capital is a wise choice. For example, if your goal is a profit of \$20,000, you can achieve it with an investment of \$100,000. However, if you have more capital, such as \$200,000 or \$500,000, reaching the target will be even easier and faster.

Secondly, seizing major opportunities. This Friday's non-farm payroll data will cause significant market movements, and the corresponding trading opportunities will multiply. I plan to capture a trading opportunity with a single trade that could yield over 300% in profits. Are you ready to pursue this goal with us?

Dear friends, life is full of challenges, and the investment market is no exception. It is precisely these challenges that inject new

**FB Finance Institute - 15th Session**

energy and hope into our lives, driving us to continuously improve.

The recent market turbulence and the pullback in stock indices have motivated us to actively seek breakthroughs and pursue portfolio stability. We have adopted a diversified approach, incorporating stocks, stock options contracts, BTC spot, academy tokens, and cryptocurrency contracts.

Currently, the overall returns from BTC spot, institute tokens, and cryptocurrency contracts are quite impressive and steadily growing.

At this moment, we must align with the trend and increase our investments in these high yield projects. It is particularly important to understand the fundamental advantages of large capital accounts, especially as we approach the significant opportunity presented by this Friday's non-farm payroll data.

First, large capital can withstand greater market volatility, maintaining relatively stable positions during intense fluctuations.

**FB Finance Institute - 15th Session**

Second, large capital allows for a diversified investment portfolio, such as a combination of medium and short term contract strategies, thereby reducing the risk of a single asset. Contract trading operates on a margin trading model, where large capital can not only amplify actual profits but also lower the risk ratio. Most importantly, large capital can improve capital efficiency, ensuring that every penny invested is maximized.

Therefore, I strongly recommend that, if conditions permit, everyone increases their investment funds and joins me in seizing the opportunities presented by this Friday's non-farm payroll data. We are aiming for the challenge of achieving over 300% profit in a single trade! Follow my strategy rigorously, and I will take full responsibility for your success!

## Ai4.0 - Future Leaders - 200% Profit Challenge Plan

Achieve an 200% Return on Total Assets in Just 7 Days!  
Follow the Rules Strictly, and We Cover Any Losses!  
Customized Investment Plans to Help You Quickly Become an Investment Leader!

Date	Transaction Type	Total Amount Invested	Profit Ratio	Average P&L	Cumulative Return Rate	Total Assets Growth	Total Assets Compound Growth Rate
7/28/2024	—	—	—	—	—	\$5,000.00	0.00%
7/29/2024	Platform's native token - 100X	\$500	110%	\$550	100%	\$5,550.00	11.00%
	Platform's native token - 100X	\$500	130%	\$650	230%	\$6,200.00	24.00%
7/30/2024	Platform's native token - 100X	\$500	80%	\$400	310%	\$6,600.00	32.00%
	Platform's native token - 100X	\$1,000	85%	\$850	395%	\$7,450.00	49.00%
7/31/2024	Platform's native token - 100X	\$700	90%	\$630	485%	\$8,080.00	61.60%

Congratulations to everyone for achieving a return of no less than 90% on this trade, with a total asset return rate exceeding 60%!

Why do I consistently choose to go long? This is the essence of trend-following trading. In a typical uptrend, trend-following strategies offer a higher probability of success, even when faced with price fluctuations. The Bollinger Bands trading secrets I shared yesterday form the foundation of this trend-following strategy, and I encourage everyone to study them carefully and compare them in practice.

**Due to time constraints, I'll conclude today's session here. Now, please take the following actions immediately:**

First, we plan to allocate 50% of the profits from this contract trade into fixed-income products with a duration of 7 to 90 days. This is a safe and prudent choice to ensure steady asset growth.

Second, if you missed the earlier trading signals, please contact my assistant immediately. She will help you quickly join our profit plan, ensuring both convenience and safety!

Finally, please share the results of your recent trade so that we can all share in your joy and achievements!

Additionally, pay special attention to the "Options Wizard" who will be sharing insights at 3:30 PM ET. He will discuss how to profit steadily in both bull and bear markets, providing you with more inspiration and deeper insights! Have a wonderful day, everyone!

## Closing Commentary

Good afternoon, dear students and friends! I'm James Wilson, here as promised. This morning, Professor Clark shared with us the story of Mr. M, which was truly inspiring. The story reminds us that when historic opportunities arise, we must seize them with forward thinking and unwavering belief. Missing out on such opportunities can lead to irreparable regret. Let me share a quote that I hope will help strengthen your resolve:

"From your childhood perspective, the future might seem bright or bleak, filled with uncertainty. However, when you look back on your life from the vantage point of old age, you will see a clear and distinct path, a road you were destined to walk. People often say they can't foresee the future, but the truth is, they've already seen it. The most certain thing in life is its uncertainty. Therefore, we must cherish every opportunity and embrace all the beautiful things in the present. Now, what is the one opportunity we must seize right now? Let's use the multi-dimensional perspective of options to look at the opportunities before us."

Last time, I discussed the impact of this week's earnings reports on the market, drawing a parallel with this story:

Damocles was a favored courtier of King Dionysius. He was known for his flattery, always eager to please the king. One day, the king decided to let Damocles experience his wealth and power by switching places with him for a day. Damocles enjoyed the luxury and splendor until he noticed a sharp sword hanging above his throne by a thin strand of horsehair, ready to fall at any moment. Only then did he realize that the king's position was not as fortunate as it seemed, and that danger was ever-present, like that sword. Eventually, Damocles begged to return to his former position. Today, we use the term 'Sword of Damocles' to describe an imminent and ever present danger."

Isn't the current stock market much like this? Historically, August and September are weaker months for stocks, and the upcoming presidential election in November could further destabilize the market. This is the investment world's "Sword of Damocles." So, what should we do? Let's take a cue from Warren Buffett's

strategy in such situations.

TOTAL					\$400,320,330,542
Apple Inc	AAPL	789,368,450	5.1%	\$218.19	\$172,232,302,106
Bank of America Corp	BAC	961,646,715	12.3%	\$40.98	\$39,408,282,381
American Express Company	AXP	151,610,700	21.3%	\$251.64	\$38,151,316,548
Coca-Cola Co	KO	400,000,000	9.3%	\$67.48	\$26,992,000,000
Chevron Corp	CVX	122,980,207	6.7%	\$159.15	\$19,572,299,944
Occidental Petroleum Corp	OXY	255,281,524	28.8%	\$60.14	\$15,352,630,853
Moody's Corp	MCO	24,669,778	13.5%	\$455.39	\$11,234,370,203
Kraft Heinz Co	KHC	325,634,818	26.8%	\$33.74	\$10,986,918,759

Buffett's recent actions: Berkshire Hathaway sold off \$3 billion worth of Bank of America stock. From selling Apple to now Bank of America, this move has drawn widespread attention. Why did he do it? Is he bearish on the market?

- First, Buffett has chosen Abel as his successor, meaning he needs to leave sufficient cash reserves for the future leader. These sales ensure that the company has enough cash to handle future market volatility.

- Second, Buffett has some doubts about the current market. His

choice to sell stocks after Q2 earnings exceeded expectations shows his cautious approach to potential future crises. This doesn't mean he's entirely bearish, but rather that he's preparing for possible downturns.

- Third, Buffett, who is about to turn 94, has experienced many market crashes and understands the vulnerabilities of bank stocks during financial crises. Holding cash provides more stable returns, especially considering that short-term treasury yields can exceed 5%, while Bank of America's dividend yield is only 2.33%.

In my view, Buffett's actions are not about being bearish on the market or stocks. Instead, he's strategically preparing for winter, ensuring he has enough reserves to seize opportunities during market volatility. This strategy has proven effective throughout his long investment career. Can ordinary investors learn from Buffett's approach?

If you believe the U.S. stock market has risen too much over the past year and a half and that the popular sectors have peaked, it

might be wise to take profits and hold cash while you wait. However, once you exit the market, patiently waiting for a market crash can be the hardest part—many people exit at high prices only to re-enter shortly after. According to market patterns, the U.S. stock market will inevitably experience a significant drop before rising again. So, will the U.S. stock market crash now?

When Microsoft's cloud business slightly missed expectations, Wall Street immediately sold off in large volumes, but the market didn't experience systemic risk or a black swan event. Therefore, the current market decline is merely a reflection of investors taking a cautious stance. The market will certainly reach new highs in the future. Since we're going to trade anyway, why not seize more certain investment opportunities?

Back to the main point: we should cherish every opportunity and appreciate all the good things in life. And now, listen carefully: the one opportunity we must seize is Professor Clark's Ai4.0 - Future Leaders - 200% Profit Challenge Plan. My 20 win streak trading plan is also part of it. Since this trading plan is a diversified

**FB Finance Institute - 15th Session**

investment strategy, we can profit no matter how the stock market plays out! Remember, when faced with an opportunity, the right move is to grab it! True experts earn money from their knowledge.

In 2020, I led my students on an incredible journey, achieving a record of 36 consecutive wins, multiplying some students' initial capital by 59 times! My goal is to elevate each student's investment philosophy and wealth to new heights. As you know, I enjoy teaching while trading live because I don't want you to miss any trading opportunities while learning. I prefer that you learn through practice, deepening your understanding of investment principles while making money. The same applies to cryptocurrency contracts.

Achieving 20 consecutive wins in investment trading is indeed a challenging task. But I am confident I can create another miracle. Although our previous options trading signal had a record of 10 wins and 9 losses, which left some regrets, this does not stop me from accepting the challenge. Cryptocurrency contracts are

simpler than options, making our goal of 20 consecutive wins easier to achieve. This time, I will give my all, in my best form, to challenge what seems like an impossible goal!

My 20 consecutive wins strategy operates on a compound interest model. It may sound complicated, but it's actually very simple. The compound interest model means that after each trading cycle, the investment returns are reinvested, so the next cycle's returns are calculated based on the updated, higher principal. Simply put, it's "interest on interest" — money making money, with the profits growing more and more!

For this trading model to work effectively, it requires a strategy of large funds, small positions, and high frequency trades. The larger the funds, the higher the probability of profit, and the easier it becomes to achieve those profits. Each trade will be executed using 10% of the principal. If you invest \$200,000 in my compound interest model for the 20 consecutive wins plan, let's see what happens:

<b>Rounds</b>	<b>Principal</b>	<b>10% Position Size</b>	<b>130% Profit of Position Size</b>	<b>Total Amount</b>
1	200,000	20,000	26,000	226,000
2	226,000	22,600	29,380	255,380
3	255,380	25,538	33,199	288,579
4	288,579	28,858	37,515	326,095
5	326,095	32,609	42,392	368,487
6	368,487	36,849	47,903	416,390
7	416,390	41,639	54,131	470,521
8	470,521	47,052	61,168	531,689
9	531,689	53,169	69,120	600,808
10	600,808	60,081	78,105	678,913
11	678,913	67,891	88,259	767,172
12	767,172	76,717	99,732	866,905
13	866,905	86,690	112,698	979,602
14	979,602	97,960	127,348	1,106,951
15	1,106,951	110,695	143,904	1,250,854
16	1,250,854	125,085	162,611	1,413,465
17	1,413,465	141,347	183,750	1,597,216
18	1,597,216	159,722	207,638	1,804,854
19	1,804,854	180,485	234,631	2,039,485
20	2,039,485	203,948	265,133	2,304,618

With \$200,000 as your starting capital, and trading with 10% of your position each time in a compound interest model, by the sixth trade, your initial capital will have doubled. By the 14th trade, your funds will reach \$1 million. After completing all the signals, your capital will grow from \$200,000 to \$2.3 million! Why is the compound interest model so powerful? Because each gain automatically increases your investment principal, making your wealth grow like a snowball. The larger the capital, the safer the trades, the more signals you can follow, and the easier it is to

achieve your goal. So, what do you need to do to accomplish this?

We know that throughout the history of investment, no one has ever achieved greatness alone. Those who fail often do so because they fought alone. The key to success is finding the right partners to complement your weaknesses, rather than trying to master everything yourself. Otherwise, opportunities might slip away while you're still figuring things out.

So now, complete the task I've given you. In the face of an opportunity like 20 consecutive wins, please privately share with me the assets you currently hold, whether they are losses or gains. I will analyze and interpret them for you, and together, we will devise the best plan for you to participate in the 20 consecutive wins strategy. This portfolio includes a variety of strategies to handle all market conditions, and I will help you navigate bull and bear markets to achieve significant returns.

So, please don't forget to vote for me, okay? Show your determination, and let's defeat Crypto Shark Mr. B together. I'll

**FB Finance Institute - 15th Session**

secure the position of Chief Practical Instructor and a seat on the Foundation's Board, and you'll achieve exponential growth in your assets, leading to a breakthrough in your financial situation! Let's walk this journey together!

Since cryptocurrency contracts may trigger a trading signal at any time, please be prepared. Once a signal appears, I will immediately announce it in the signal group, so stay tuned.

Congratulations to everyone who participated in the Ai4.0 - Future Leaders - 200% Profit Challenge Plan! Once again, we've achieved an astonishing victory! Our sixth trading signal has brought in another 80% profit, driving the total return on assets up to 70%!

**For those who completed this round of trades, please take the following two actions:**

1. Reinvest 50% of this victory into safe and stable fixed-income products to ensure continuous asset growth.
2. For those who missed the trading signal, please contact me

**FB Finance Institute - 15th Session**

immediately. I will provide you with additional trading strategies. Let's celebrate this successful trade together and relish in the joy of our achievements! Keep pushing forward, as our next target is even higher returns!

### **Today's Interactive Q&A**

1. The ADP data, serving as a precursor to the non-farm payroll (NFP) report, has set strong market expectations. This Friday's NFP data could herald a potential wealth opportunity. Professor Clark has already identified this chance and plans to execute a trade with the potential to yield over 300% profit in a single move. How do you plan to position yourself for this opportunity?
2. I am currently executing a 20 consecutive wins plan to reward my supporters, with two successful trades completed so far. The key to achieving 20 consecutive wins lies in maintaining the compound interest model. What are the essential characteristics of the compound interest trading model?
