Dear friends, family, and esteemed future investment masters,
good morning!

AI 4.0

Today marks the beginning of August—a new month, a new hope. Over the past month, we have navigated the ups and downs of the stock market, but through our internal testing plan and data analysis, we have discovered a new direction. By combining contract trading with Ai 4.0's preference for high-volatility markets, we launched the "Ai 4.0 - Future Leaders - 200% Profit

FB Finance Institute - 15th Session

Challenge Plan."

Currently, this plan is showing exhilarating results: six trades, all successful, with a total asset return rate of 74%.

The start of a new month brings new planning, new challenges, and new opportunities. Today's session is critically important.

First, we are at a pivotal moment—whether we can achieve the remarkable feat of doubling our total assets.

Second, I will share an in-depth analysis of the long, medium, and short term trajectories of this bull market in the stock and cryptocurrency markets. This will not only shape our investment strategies for the end of the year but will also profoundly influence each of you and our institute's overall teaching and investment planning.

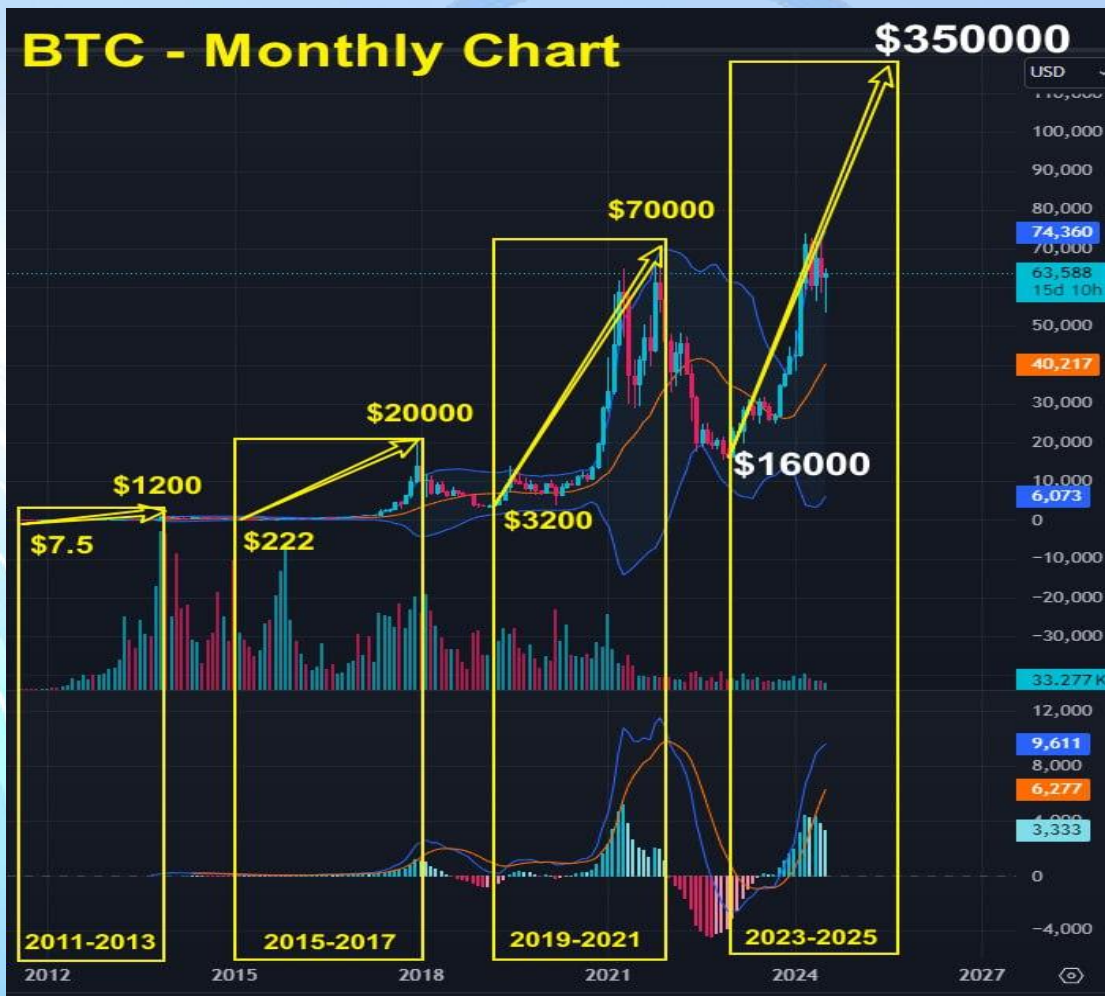

I hope that each of you, after today's session, will have a clear investment plan, ensuring that you remain undefeated in short term, medium term, and long term investments.

Friends, I believe that today marks an important turning point as

FB Finance Institute - 15th Session

we step toward even greater success. I am confident that we all have the ability and determination to achieve outstanding results in this new month. Let us strive together, march toward excellence, embrace glory, and write our own legends!

First, let's examine the long term trend. Interest rate cuts are inevitable, and history has repeatedly shown us this "standard answer."

FB Finance Institute - 15th Session

Such cuts are undoubtedly positive for both the stock and cryptocurrency markets. If the stock market follows the cyclical bull market pattern from 2011 to 2015, it could extend its duration until 2026. Alternatively, if it mirrors the tech driven cyclical rebound path from 1990 to 1998, it might continue until 2030.

The conclusion is that these trends favor making 3 to 5 year plans. We can identify suitable entry points around the time of interest rate cuts, invest in these assets, and hold them to secure an advantage in future markets.

Now, turning to the cryptocurrency market. We are currently in the post halving bull market phase, with the projected cycle expected to last until 2026, followed by the next cycle from 2026 to 2029. According to our previous calculations, during this bull market, BTC is expected to reach \$350,000 by 2026. In the subsequent bull market, it is projected to reach at least \$1,000,000.

Comparatively, the certainty and potential returns of BTC and its related opportunities far exceed those of regular stocks—this is

an indisputable fact.

Friends, historical experience and future expectations provide us with a clear investment roadmap. We need to seize this opportunity, fully leveraging the cyclical nature of the markets, to secure our future success.

In yesterday's Federal Reserve rate decision, Jerome Powell stated that as the labor market cools and inflation decreases, the risks to

achieving employment and inflation goals continue to balance. He mentioned that at the September FOMC monetary policy meeting, a rate cut might be an option. If the inflation data supports it, the FOMC could choose to cut rates as early as September.

Market consensus maintains a 100% probability of a rate cut in September by the Federal Reserve. However, this is not entirely good news. Beyond the disappointing earnings reports from major tech companies, which have dragged down stock indices, the mid-term stock market faces two significant and almost unavoidable factors:

- Once a rate cut is confirmed, what will smart investors do? They will likely sell stocks that have seen substantial gains, such as recent high performing tech stocks. Markets tend to rise on rumors, much like the turning point between rate hikes and cuts that began in late September last year. Therefore, the best scenario for stock indices from August to October this year is to remain volatile, with a significant decline being unlikely.

- Regardless of who wins the election, they likely wouldn't want stocks to rise before the election, as a post-election rally would be more favorable for the leader's political achievements.

Now, let's look at the mid term outlook for the cryptocurrency market. The factors influencing the cryptocurrency market are fewer compared to the stock market, and the major positive factors are already well established.

Compared to the previous bull market, we are currently in the third phase, as shown in the chart, with the fourth phase poised to begin at any moment. A 2-3x increase could unfold at any time, making this the crucial period for BTC to rise to between \$150,000 and \$200,000.

Remember, this conclusion reveals a massive potential opportunity!

FB Finance Institute

In the short term, the stock and cryptocurrency markets are primarily influenced by economic data, especially the non-farm payroll report due this Friday. This data is one of the two non-farm payroll reports before the potential rate cut in September, and its significance even surpasses Powell's recent remarks. If the data meets expectations and is favorable, both stock indices and cryptocurrencies will likely receive a positive boost. For stocks, this will be an opportune moment for us to take profits and reduce our positions.

FB Finance Institute - 15th Session

This morning, it was reported that initial jobless claims increased by 14,000, bringing the total to 249,000. Over the past two years, this figure has hovered near historical lows, but in recent months, the number of people seeking and receiving unemployment benefits has risen. Hiring is slowing, and by many indicators, the labor market has returned to pre-pandemic levels. This data is negative for the U.S. dollar but positive for stock indices, cryptocurrencies, gold, and oil. Therefore, we have even more reason to be optimistic about tomorrow's non-farm payroll data, which could further weaken the dollar.

The cryptocurrency market is currently in the midst of a new profit cycle. We should actively position ourselves in BTC and institute tokens in spot trading; they are sure not to disappoint. BTC could break through \$74,000 at any moment, and institute tokens could potentially double this month. In the near term, we will be launching an important market capitalization management plan aimed at ensuring the steady growth of the token's market value, which currently appears quite stable!

If you have followed my advice and started optimizing your

FB Finance Institute - 15th Session

investment portfolio, please pay close attention to these investment opportunities. Feel free to message me privately to discuss personalized investment plans!

Friends, please be aware that I may release the latest trading signals at any time.

Now, let's discuss how to seize the right moment for reducing

FB Finance Institute - 15th Session

positions in your short term stock strategy. In the Bollinger Bands trading secrets course, I emphasized the importance of understanding the simplest technical indicator first—the middle Bollinger Bands, which represents the direction of the trend.

Here are three straightforward execution standards based on daily charts:

1. When the Bollinger Bands middle band is moving upward, we can hold our positions.
2. When the middle band starts to move downward, you should consider selling as the price retests the middle band.
3. When the Bollinger Bands are moving sideways, you can reduce positions or sell near the upper band.

Bollinger Bands Trading Secret (Part 3)

-When the three lines of the Bollinger Bands are moving sideways, the primary strategy is to sell high and buy low: sell near the upper band and buy near the lower band.

-This strategy is particularly effective when the price first touches

FB Finance Institute - 15th Session

the upper or lower band. The greater the difference between the upper and lower bands, the higher the volatility, the greater the profit potential, and the more valuable the trade.

-Often, the Bollinger Bands may not show a perfectly sideways movement, but as long as the middle band is moving sideways, this strategy can be applied.

If you are preparing to optimize your short term trading strategy, take \$CLSK as an example. Although BTC has shown strength recently, it hasn't driven beneficiary stocks to break out.

Objectively, the current trend is oscillatory. In the next round of upward movement, if the price on the daily chart reaches near the upper Bollinger Band without a significant increase in trading volume (higher than point A), we should reduce positions and allocate funds to follow the profit plan!

Friends, please take note! We have just released the latest trading signal in our exclusive trading signal group. This is an excellent buying opportunity in an uptrend, so do not miss out—this trend makes it easier for us to profit.

Currently, we are using contract trading opportunities to hedge against the uncertainties in the investment market. With the Ai 4.0 system's data becoming increasingly stable, our launch of the "Ai 4.0 - Future Leaders - 200% Profit Challenge Plan" is a significant benefit for our members and supporters.

Based on my analysis today, I strongly recommend that you take action immediately and transfer 20-50% of your stock positions into this plan!

Every benefit period is limited because my time and energy are finite. As members of the institute, I hope you can seize this opportunity firmly and not let this valuable chance slip through your fingers.

To reiterate the discipline required for this profit plan:

- Strictly adhering to the trading strategy and signals is our key to success. Only by following the rules can we achieve reliable results.
- I cannot be responsible for actions that do not follow the rules; however, if you follow the rules and still encounter losses, I will take full responsibility!

In the world of investing, having vision and dreams is a common trait among all successful investors. For those who aspire to turn their dreams into reality, personalized investment strategies are not just an option but a necessary path to achieving a more sophisticated investment perspective and strategy!

Since our 15th internal sharing session, I have been committed to a clear goal—not only to test the Ai 4.0 system but also to cultivate a group of early supporters, particularly those who have faith in the institutional version of Ai 4.0. Your participation and trust are the foundation of our success!

In our investment journey, understanding each investor's unique background, time constraints, and goals is at the core of our personalized investment solutions. Your dreams and objectives deserve our utmost dedication.

For those with tight schedules, we have designed a strategy that emphasizes mid term trading complemented by short term opportunities, aiming to bring you returns that exceed expectations.

Share your investment dreams with us, and let's embark on a journey tailored specifically for you. Based on your financial situation, interests, risk tolerance, investment horizon, and return goals, we will craft a highly efficient and streamlined investment plan. Our objective is to ensure that your investment journey is not only profitable but also safe and worry-free, through customized strategies and careful guidance.

Imagine your capital doubling, which in turn doubles your investment efficiency, potentially quadrupling your returns. This is the significant advantage that our personalized investment plan can offer!

FB Finance Institute - 15th Session

At this moment, I would like to extend my heartfelt congratulations to all the participants of this profit plan! With the victory of the seventh trading signal, I sincerely congratulate everyone who bravely participated and contributed to this legendary profit making journey! Together, we have reached a new peak with a total asset return rate of 88.8%!

In an environment of stock index fluctuations, we have discovered a rare, stable, and exceptional path to investment success.

Despite the challenges, we have steadily advanced, striving for perfection! I must emphasize again that strict execution is the key to success. In the world of investing, nothing is more important than consistent profitability.

At this moment, let us remember the golden rule of investing: balance offense with defense. I strongly urge that every profit from a trade be prudently allocated. Safely invest 50% of the profits from this trading signal into fixed-income financial products, preferably with terms of 7 days, 30 days, or 90 days. This is not just a strategy; it is wisdom. It ensures that the hard

FB Finance Institute - 15th Session

earned profits are well protected, witnessing our victories, building an impenetrable defense, and generating stable returns for us.

Today, our goal is to surpass a total asset return rate of 100%! This afternoon, at 3:30 PM ET, let "Shark" help you achieve this goal. He will share important topics, including "The Unique Advantages of Institute Tokens and Platform Native Tokens."

Let us move forward together, pushing our investments to new heights. Wishing everyone a great day! Keep up the momentum!

Closing Commentary (α & β Strategy)

Ladies and gentlemen, good afternoon. "Simplify investing, elevate countless families' quality of life." I'm Richard Bill, a devoted disciple of Prof. Clark, a proud beneficiary of the AI 4.0 system, and a strong contender for the next Chief Practical Instructor. Thank you all for your unwavering support!

FB Finance Institute - 15th Session

Our legendary mentor, Prof. Clark, has shared a wealth of powerful knowledge and strategies this week. From how the crypto market can surpass gold, to if you were the U.S. president, how would you use BTC to boost national wealth, to the dramatic story of Mr. M losing 4,999.5 BTC, and the huge impact of halving cycles and market penetration on the future of cryptocurrency. These are life changing opportunities that can flip your destiny and unlock the door to financial freedom. Do you grasp the profound significance of these insights?

Today, I'm here to solve your problems. For some, this means maximizing returns in our Future Leader 200% Profit Plan; for others, it marks the beginning of a wild journey toward astonishing wealth. Trust me, this will be your turning point. Please cast your vote for me!

August is here, folks! This is the season to learn and get ready for a harvest. Smart investors know that the secret to optimizing your portfolio in this market is simple: Speed wins!

Take last week, for example. Some savvy traders took Prof. Clark's advice and quickly reduced their stock positions. Not only did they dodge losses, but they also raked in some serious gains that others can only dream about! And just this past Tuesday, if you followed my lead and jumped into the Future Leader 200% Profit Plan, you'd be laughing at the stock market's downturn, because

FB Finance Institute - 15th Session

your account balance would've skyrocketed like a rocket!

Why and How Should You Cut Stock Positions? You don't need to crack my four go to stable profit strategies. Just keep your eyes on MA13/34/55.

Look at the chart—when MA13/34/55 are all pointing upwards, like a bull ready to charge, I'm going all in on stocks, like in segments A, B, and C. When MA55 isn't dropping yet, but MA13 and MA34 are tangled up like they're slow dancing, I use half my position to play the spread, like in segments D and E. But if MA55's curve starts dropping like Steph Curry's three pointer, it's time to ditch those stocks as fast as you'd drop a bad date!

So, take a look at your stocks—figure out where they stand, and move quickly. Stay ahead of the game, and you'll be the one leading the pack!

Listen Up, Folks! I've handed you the keys to the kingdom—do you know what to do with them? If you're still scratching your head, let me break it down for you.

~ Bullish and Bearish Alignments? Child's play. Once the alignment is in place, the trend is rock solid.

~ But if the moving averages are tangled up like a plate of spaghetti? That's a sign the price is gearing up for a street fight.

FB Finance Institute - 15th Session

Holding onto stocks at this point is just wasting time because you don't know if the bulls or bears will come out on top, or when they'll finish duking it out. So, at the very least, cut your positions and tip your hat to the market.

Take yesterday's star stock, \$NVDA, for example. The daily chart shows no significant increase in volume, and MA13 and MA34 are starting to head downhill. Even if the stock price hits a new high, it's gonna need time to digest the recent drop. So, today's big dip? Totally expected.

Short-term trading? That's the kind of game that gets your adrenaline pumping and makes you feel young again. Whether we're talking stock options contracts or crypto contracts, it's all about fast money. Just check out Mr. W's recent streak: 9 wins out of 10 trades, all by seizing those wild market swings. If you're not selling, you're just leaving money on the table—that's the golden rule of the market, and nobody can break it.

This is survival of the fittest, folks. The current market isn't going to generously hand you a long bull run. Prof. Clark already mapped out the future of the stock and crypto markets this morning. If you get it, you're cashing in big time; if you don't, you're just playing dead!

Now it's time to show the market who's boss. How are we going to own August and turn the market into our playground? I've got two killer strategies lined up for you. If you're a steady mid term investor, load up on BTC and institute tokens (I'll drop some secrets on this later). They're solid enough, and their returns will beat out 95% of other investors.

But the real game changer? Crypto contracts. Why? Because the numbers don't lie: 88.8% total asset return, leaving Wall Street in the dust. Stick with me, and we're about to break through 100%!

How Will Institute Tokens Help Us Dominate the Market? Let's dive into two explosive topics today. First up: Why aren't Institute Tokens in the contract market?

Because we're not here to play it safe or follow the crowd. We're here to dominate. Spot trading is simple and straightforward, like riding a bike on a sunny day. It's for those who want to take control, who understand that real growth comes from stability and strategy. The beauty of the spot market? Lower risk, ideal for long-term investments, easy to grasp, market stability, and ownership of real assets.

Think of our tokens as the turbo engine of the AI4.0 system. With AI4.0 about to launch, the value of our tokens is set to rise steadily, like a rocket ready for liftoff. This ensures stable growth for both investors and stakeholders. Plus, Institute Tokens carry

FB Finance Institute - 15th Session

the mission of charity and education (investor training), making their stable appreciation absolutely crucial.

Second Point, here's the inside scoop! With the successful rollout of our two internal test plans and the rising heat of the Future Leader 200% Profit Plan, the institute is planning to launch a market value management plan for Institute Tokens this month. Think of it as a high reward chess game designed to optimize and boost its market value.

Folks, the logic here is just like stocks. Our strategy includes premium user purchase incentives, dividend measures, token buybacks, and financing. These moves will skyrocket investor confidence, solidify the capital structure, unleash market liquidity, and elevate the brand image—all sending the token price soaring to the moon.

Personally, I'm forecasting that the Institute Token's price will break \$20 by year's end! We can even sign a wager on it. Are you ready to embrace victory?

So, right now is the golden moment to buy Institute Tokens. Imagine this: with the Future Leader 200% Profit Plan smoothly advancing, hitting our targets is just a matter of time. When that happens, how much capital will flood in, driving up the token price? Seize this opportunity while those hesitant funds are still on the sidelines. Increasing your position now could be your smartest spot investment of the year, with multiple returns just ahead. Isn't that the fast track to winning big?

Winning with speed? You can't do it without crypto contracts! That's the core theme I'm sharing today. Folks, listen up—I've been waiting like a hawk for the right moment, and now the trading signal is out. Move fast! The quick handed are already raking in profits.

Later, I'll break down how I read this trade. Meanwhile, keep a close eye on the upcoming tips and insights I'll be dropping in this group.

But first, check out my Four Strategy Diagrams. Let's play a little game: can you guess which strategy I used this time? Soon, I'll reveal a key technical point—grasp it, and you'll hold the wealth code in your hands.

Folks, speaking of crypto contracts, we gotta talk about platform native tokens! Why aren't platform native tokens in the spot market but only in the contract market? Simple: Volatility. This is a bold strategy by the exchanges. Every platform needs time to build up, gain exposure, and establish a brand. Highly volatile

assets grab attention fast, creating a chain reaction that boosts visibility.

Trading platform native tokens in the contract market is like riding a wild stallion. It leverages the flexibility of margin trading, higher liquidity, risk management tools, and lower transaction costs, making these tokens way more appealing in the contract market than in the dull and predictable spot market. High frequency trading and high liquidity provide an exhilarating trading environment, drawing in more traders and speeding up market maturity.

Imagine Binance's BNB—another platform native token. It's like a rocket, skyrocketing by 690,000% in just a few years. This isn't just a numbers game; it's an unprecedented value explosion.

The platform native token we're trading now? It's a beast on a high speed growth track, ready to make its legendary mark on the crypto stage. The AI4.0 system has identified this dark horse through real time trading data. It's our secret weapon to smashing profit plan targets. Since we discovered it, its value has

grown hundreds of times over with 100x contract. Did you catch that?

	Platform's native token - 100X	\$1,000	70%	\$700	725%	\$10,140.00	102.80%

Important Update: We've just closed that trade! Heads up, everyone! The latest trade has just been closed, and it's propelled us past the 100% total asset return mark. This means we're halfway to achieving the 200% target of our Future Leader Profit Plan. With the NFP data on the horizon, I'm confident we'll reach the rest of our goal even faster!

Alright, team, listen up. After harvesting those wins, it's time to lock in our gains. Here's my plan: every time we strike gold in a contract trade, I suggest we stash half of it away into a 7-90 day fixed-income vault. Think about it—this is like planting half of our crop back into the ground, ensuring that no matter how wild the weather gets outside, we've got a steady harvest waiting for us.

Folks, this isn't just about being cautious; it's the blueprint for building a fortress around our wealth. It's about making sure that while we're out there riding the waves, we've got a portion of our treasure safely buried on shore. So, let me be clear—this strategy is our lifeline. Putting half of our profits into these short term safety nets isn't just being prudent; it's our ticket to diving deep for pearls without worrying about the storms above.

Alright, folks, let's break down the key points from this trade!

First off, even though MA5/10/20 doesn't have the same win rate as MA13/34/55, the principle is the same. Take a look at the 15 min chart—notice how MA5/10/20 forms a classic bullish

alignment? That's the essence of trend following trades; we're more likely to win when we're riding a clear trend.

Second, in this kind of textbook trend, using contract trading allows us to grab just a tiny bit of price difference to secure outsized gains. This makes our trading process fast, easy, and highly profitable.

Now, the third point is crucial: how do we nail the entry and exit points in trend trading? Today, I'm sharing the significance of a candle with a long lower shadow that closes higher. Every candle with a shadow represents a disagreement between the bulls and bears at that price level; after the conflict, one side always wins. A lower shadow means the bulls won, and an upper shadow means the bears won. The longer the shadow, the more intense the battle; once one side wins, the price is highly likely to move in their favor!

Now, compare this with today's long contract—did you notice? We jumped in after that long lower shadow formed, and then we quickly locked in our profits.

Now, here comes the important part! Although this pattern often appears in active trading varieties and is very profitable, but what if you've got a great price trend going, but this perfect pattern doesn't show up? Don't sweat it, the solution is simple: be patient or tap into one of my four secret weapons.

If this pattern does appear during your trade, it's like hitting the jackpot. That's the moment to increase your position! This is where having a large account balance really shines. Sure, the price swings can be wild, but adding to your position means both risk and profits are amplified. What's the best strategy? Boost your account balance. This not only shields you from the market's chaos but also sends your profits soaring like a rocket, especially when you harness the power of compounding.

Compounding is the holy grail of trading. Sure, there are plenty of stories about overnight riches, but consistently outpacing Buffett through the magic of compounding isn't just a dream. The real challenge? Sticking with learning and growth. Right now, combining three course systems with real world practice is the best way to level up. Who's with me?

Let's be real, folks! There's no such thing as a 100% win rate trading model in this world, but steady profits? That's the treasure everyone can chase. If you're a fan of mine, feel free to DM me. The crypto market is my playground, and I've been dominating here for years. I firmly believe that while achieving my dreams, I can lead a group of like minded rebels to victory.

Sure, the race to become the next Chief Practical Instructor is my personal battle, but I know that together, we can become an unstoppable force. Standing with me means holding hands with victory!

Today's Interactive Q&A:

1. In Prof. Clark's morning session, he laid out a bullish roadmap for both the stock and crypto markets, giving us clear guidance for short, medium, and long term strategies. How should we sharpen our investment strategies to navigate the current volatility?
2. Today, I explained the concept of "speed wins" through multiple dimensions—stocks, Institute Tokens, platform native

token contracts, technical training, and real world practice. Did you get it? How do you plan to apply it in tomorrow's NFP market action? What kind of returns are you aiming for?

That's everything I'm sharing today. If you found today's insights helpful, cast your sacred vote for me. Let's dominate this market together!
