

Morning Review

Good morning, dear students! I'm James Wilson. Today is a crucial day. Earlier this week, Professor Clark alerted us to a significant opportunity coming this Friday. He emphasized that today's NFP data could present a chance for profits as high as 300%! We'll be leveraging cryptocurrency contracts, utilizing the power of leverage combined with the Ai4.0 system to evaluate and capture signals, enabling us to seize this tremendous opportunity.

Now, please focus your attention and stay tuned to our signal group. Today's trading signals are about to be released. This opportunity is perfect for intraday swing trading, so please follow the signals closely and execute the trades accordingly!

The trading instructions have been issued, so please strictly follow the signals!

Why is the NFP data so important? No matter what kind of investment you're involved in, one thing is certain: the investment market is closely tied to the economy. When the economy is strong, markets tend to rise; when the economy weakens, markets tend to fall. The NFP data is one of the most crucial indicators of the U.S. economy's health.

NFP data provides a clear picture of whether the economy is expanding or slowing down, directly affecting consumer purchasing power and confidence. When the data is strong, more people are willing to spend and invest. The Federal Reserve also considers NFP data when setting monetary policy—strong data may lead to interest rate hikes to curb inflation, while weak data could prompt stimulus measures to boost the economy. Therefore, strong NFP data typically drives the stock market higher, while weak data can cause the market to fall.

However, the cryptocurrency market often reacts differently to economic data, especially crucial indicators like NFP.

The U.S. Bureau of Labor Statistics recently reported that the U.S. added 114,000 non-farm jobs in July, marking the lowest figure since December 2020, far below the expected 175,000 and a sharp decline from the previous month's 206,000. The unemployment rate surged by 0.6% from its lowest point this year, signaling that the U.S. economy is beginning to enter a recession. According to the Sahm Rule, if the unemployment rate rises by 0.5 percentage points above its low from the previous year, a recession has likely begun.

While this data is broadly bearish for stock indices, the cryptocurrency market may behave differently due to its nature as a safe haven asset. When stock markets panic, cryptocurrencies often present unique opportunities!

Friends, as of now, we've successfully won 8 consecutive trades! Our total return on assets has reached an impressive 100%! I have no doubt that we're getting closer and closer to achieving our profit plan's goal. Today's NFP data is the best investment opportunity of the week!

This isn't just another trade—it's a pivotal moment to maximize the potential of your capital with the right trading strategy! While others are watching their assets bleed in the stock market, we've already boarded the train to the halls of wealth by trading

FB Finance Institute - 15th Session

cryptocurrency contracts. This is the reward for making the right choices—true masters earn through their understanding.

Friends, our latest trading signal has already brought in excellent returns! The profits keep rolling in! Please stay tuned for the upcoming trading instructions!

The fear index continues to soar, with a recent cumulative increase of around 70%, as the market continues its downward spiral. Friends, let me emphasize my point once again: On the

FB Finance Institute - 15th Session

afternoon of July 18th, I clearly explained the difference between false opportunities and real ones—do you remember? This past Monday, I spoke about how the stock market is like a "Sword of Damocles" hanging overhead—do you recall? On Wednesday, I analyzed Buffett's reasoning for selling stocks—does that ring a bell? If you paid attention to my lessons, you would have significantly minimized your losses in the stock market! If you sell your stocks and participate in my 20 consecutive wins plan, can you imagine how much profit you can get?

Imagine if you had invested \$1 million in stocks; you might have lost nearly \$300,000 recently. But if you had used that \$1 million to participate in my 20 consecutive wins trading plan, you would now have \$2 million—and the gains are far from over! The profits from today's trade are still rolling in! If you've been paying attention to my lessons and executed them with discipline, haven't we proven that we can thrive in both bull and bear markets?

FB Finance Institute

In previous lessons, I clearly suggested that if you believe the U.S. stock market's growth over the past year and a half has been too steep and that the hot sectors have peaked, it might be wise to

FB Finance Institute - 15th Session

consider taking profits and holding cash. The market's recent volatility has once again validated my perspective. What was the logic behind my judgment?

1. This earnings season, concerns about technology were triggered by Google and Tesla.
2. This week, over \$10 trillion worth of tech giants introduced even more uncertainty.
3. Warren Buffett began selling stocks, sensing dangerous signals.
4. Microsoft's cloud business slightly missed expectations, leading to massive sell-offs by Wall Street, indicating that the big players are increasingly sensitive this week, with uncertainty on the rise.
5. Market leaders and indices have formed an A-shaped top signal, a clear sign of market exhaustion.

So, how will the market evolve from here? It's evident that the leading stock of this bull market, NVDA, has already formed a double A-shaped M-top, one of the most powerful bearish patterns. Even a short term rebound is unlikely to break through the M-top's heavy resistance zone, as seen in TSLA's M-top

formation. Just as a bull market begins with the leaders, a market's decline often starts with them as well.

Initially, a September rate cut was seen as a positive for the stock market, particularly if it was a preemptive cut. However, after today's data releases, the narrative has shifted—what was once a preventive rate cut has now turned into a recession driven cut. The positive has swiftly become negative, market sentiment has deteriorated further, and we are entering a period of darkness.

I want to ask everyone a question, and I need you to answer honestly: As of today, has anyone experienced an overall loss of 35% or more in their stock portfolio? If so, please contact me directly—I will help you resolve these issues. I'll guide you through the 20 consecutive wins trading strategy to help you turn things around!

You need to understand that this week, we've only completed three trades as part of the 20 win plan, which means there are 17 more opportunities to help you bounce back! I'm still fully

FB Finance Institute - 15th Session

confident that the stock market will hit new highs in the future. But stubbornly holding onto losing stocks, waiting for them to recover, is a mistake that could make you a rigid bull. You're wasting valuable time, and time will cost you dearly, just like the Theta decay in options.

Cryptocurrency contracts, on the other hand, are completely different—we're making money right now, and today's trade is still generating profits! If you've followed my lead, hold your position and wait for the profit taking signal in the group.

And remember, while the stock market is closed on weekends, we can still trade and seize profit opportunities! So now, take action! Follow my lead, and I'll handle everything—I take full responsibility. But there's one thing: whether you earn 100% or 300% with me, I ask that you keep your promise and vote for me to become the next Chief Practical Instructor. Let's work together to defeat Mr. B! Okay?

Wherever the opportunity lies, that's where we'll focus. Once the

FB Finance Institute - 15th Session

U.S. stock market stabilizes after its current adjustment, I'll lead you in buying the dip. Yes, after we've made substantial gains in the cryptocurrency market, the stock market will likely present us with fresh investment opportunities. Then, armed with the profits we've earned from crypto, we can dive into the stock market like Buffett, scooping up bargains at the lows!

Just as I experienced in 2020, my students made the right decisions at the right time, achieving an astonishing 59 fold profit and 36 consecutive victories with me. Now, we have 17 more trading signals waiting to be seized. I'm going all in, so please support me and cast your vote. Together, let's claim the wealth that's rightfully ours from the cryptocurrency market! Help me achieve my dream of securing the next Chief Practical Instructor position!

Friends, our trading signal today has already yielded over 200% profit! Congratulations to everyone—please continue to hold and wait for the profit taking signal in the group. The esteemed professor Clark will be taking the stage at 3:30 PM ET. Are you

FB Finance Institute - 15th Session

excited about the surprises he has in store? Let's all watch and see together.

Dear friends, family, and esteemed future investment masters, good afternoon!

The start of the August stock market has indeed been concerning, but we've been met with an exciting surprise from the Ai 4.0

system. With the successful execution of two internal tests and in response to your strong support, we launched the "Ai 4.0 - Future Leaders - 200% Profit Challenge Plan." In a short period, we have achieved nine consecutive victories, bringing the total asset return rate to 126.8%, effectively hedging stock market risks and rewarding your trust and expectations. While the plan is still ongoing, the current results are truly encouraging!

As investors, we are well aware of the challenges we face: how to maximize profits while minimizing risks, how to improve our lives through investment, and how to achieve a complete turnaround in our careers through this profession. This is not only the dream of many but a dream that is entirely achievable!

The plan is still in motion, and our goal is yet to be fully realized. So, how can we seize the opportunities over the weekend? Reviewing this week's work is a skill that every investor must master. What have you learned from this week's operations? For those heavily affected by the stock market, I have some advice and solutions to share, which will be the topic of my next

FB Finance Institute - 15th Session

discussion. Meanwhile, I will keep a close watch on the Ai4.0 data and release the latest trading signals at any time.

Let us take a moment to review the astonishing performance of our investment portfolio this week. Witnessing such significant returns is not only exhilarating but also reinforces our confidence as market leaders. We have outperformed the market average, which is a testament to our hard work and a reward for your trust.

First, let's discuss our strategy for minimizing losses.

In my letter early Sunday morning, I advised everyone to reduce positions or sell, following which the stock indices dropped nearly 3%, resulting in many stocks falling over 10% this week, with some declining more than 20% over the past three weeks.

Through timely reduction orders, we collectively avoided at least a 10% loss. From this perspective, I have done my utmost to minimize your losses.

Although the recent focus on advancing the Ai 4.0 internal testing plan has led to less personalized attention, I have provided daily updates in the group with the latest recommendations for optimizing investment portfolios and had my assistant relay my insights and advice.

In the investment market, achieving great success requires not only offense but also defense. This week's market movements have provided us with textbook lessons and valuable experience.

If you followed my advice, I am truly gratified, as these recommendations helped you reduce or avoid losses.

If you did not follow my advice, I sincerely apologize!

While none of us can control the market's volatility, and although I have repeatedly reminded everyone to be mindful of risks each day, if you bought the stocks we recommended and did not execute my instructions to reduce or exit positions, this is my failure.

It indicates that our work was not detailed enough, and I must take primary responsibility for this: "Putting students interests first" has been the core foundation of our institute's growth over the past 14 years. Your losses are the institute's losses, for if you cannot achieve stable profits, how can the institute develop?

In our journey of learning and investing, we must not only share in the joy of success but also face challenges and difficulties together. If you have incurred losses in the stock market this week, please message me privately, and I will tailor an emergency plan for you. Trust me, it will be effective, and it will take effect immediately—execute it right away!

Dear friends, every market fluctuation is an opportunity for us to grow. Your persistence and trust are my greatest motivation. Seeing you progress and grow in the market fills me with immense pride and satisfaction. We are not just teacher and students; we are partners fighting side by side. Let us learn from this experience, continue to move forward, and constantly optimize our investment strategies so that we can achieve even

FB Finance Institute - 15th Session

greater success. Do you agree?

Secondly, in this week's work summary, we must express our gratitude to the cryptocurrency market, where we have truly shined!

Our holdings in the cryptocurrency market have yielded exceptional returns, thanks to our strategic allocation:

1. Spot Trading

Our mid term allocation in BTC spot continues to keep us in a profitable position. The institute tokens have shown remarkable stability, with a price increase of over 200% since the Ai 4.0 internal testing plan was announced, and since our strong recommendation, the returns have remained above 80%.

"Shark" already hinted at our recent market capitalization management plan for the institute tokens yesterday. I will make new plans based on the actual performance of the "Ai 4.0 - Future Leaders - 200% Profit Challenge Plan." Please stay tuned to the group updates this weekend.

FB Finance Institute - 15th Session

2. Contract Trading

From the start of the internal testing plan to this week's Future Leaders 200% Profit Plan, we have shared no fewer than 20 trading signals, and the results have been remarkable: This week alone, we shared 9 trading signals, achieving a total asset return rate of 126.8%!

The Ai4.0 system has played a crucial role in our outstanding achievements. It meticulously selected cryptocurrency contracts aligned with market trends and provided low risk, high probability trading signals, enabling us to make wise decisions that far outperformed the market, leading to extraordinary profits. Every trading signal we released was the result of collective wisdom and teamwork, allowing us to continuously advance and break through in a volatile market.

Friends, are you satisfied with the profits we've achieved so far?

Today, I want to emphasize a crucial point: the importance of continually adjusting and optimizing our investment portfolios in

FB Finance Institute - 15th Session

response to market changes. This adaptability allows us to capture the mainstream profit trends and stay ahead of most investors.

Market trends are driven by the flow of capital. Adopting diversified investments and optimizing our portfolios not only helps mitigate potential risks and improve investment efficiency but also allows us to approach every decision with confidence. Through the power of compounding, achieving financial freedom is merely a matter of time.

The Ai4.0 system has provided us with visionary guidance, becoming an unexpected highlight in this internal sharing. The initial goal of the internal testing plan was to evaluate the stability of the Ai4.0 system, gather meaningful data before its public launch, and rapidly enhance its overall performance.

However, we discovered that the Ai4.0 system's machine learning capabilities far surpass the speed of human judgment. It not only selected cryptocurrencies with higher certainty and greater profit

potential for our tests but also, after delivering stable and substantial returns, guided us in making the right decisions!

The current profit plan is the best testament to the power of public insight and collective wisdom. In response to numerous requests, I developed the Future Leaders 200% Profit Plan. Initially, I had some concerns, but now it is clear that those concerns were entirely unnecessary.

Although the profit plan is still ongoing, it has already exceeded my expectations in every aspect—thanks to your excellent execution and the better than expected returns. For example, in this morning's trade, we achieved over 400% profit.

This has turned into an unexpected highlight of our internal sharing session. While our current success is only temporary, your participation and performance deserve the highest praise. We are not just generating profits; we are making history!

Dear friends, family, and esteemed future investment masters,

FB Finance Institute - 15th Session

this session (15th) marks my farewell performance. I hope that with the support of the two most popular mentors and the assistance of the Ai 4.0 system, we can continue to motivate ourselves and break new records!

We are not just participants in this journey; we are pioneers. Let's make this internal sharing session the best in history—what do you say?

Important Note: I am closely monitoring the data, and I may share the latest trading signals shortly.

AI 4.0

FB Finance Institute

The latest trading signal has just been released in the trading signal group, so please make sure to pay attention. Despite my busy schedule, I am always concerned about your learning and growth. This morning's short contract order, which brought us over 400% profit, served as a vivid practical lesson.

What did you learn from this trade today? Let's review and analyze the highlights of this transaction together, drawing lessons and experiences from it to build a stronger foundation for

FB Finance Institute - 15th Session

future decisions.

From the 5 minute chart of BTC, we can see that the non-farm payroll data sparked concerns among investors about the economic outlook. Starting at 8:30, BTC began to rise, but after the market opened, stock indices continued to decline, and panic spread rapidly, ultimately leading to a significant drop in BTC. Before BTC weakened, there were notable movements in the high volatility platform native tokens, which quickly absorbed the bullish impact and then began to decline. At that moment, Mr. Wilson, the Options Wizard, decisively led everyone to seize this rare shorting opportunity.

Why did we dare to hold this position for nearly three hours? Because we grasped the essence of trend-following trading. By comparing BTC's 5-minute movement, we observed that the middle band of the Bollinger Bands continued to decline, indicating that the bearish trend was persisting. So, we held our position with confidence and ultimately achieved a remarkable return of around 400% profit!

This was a brilliant trade, a combination of courage and wisdom, and a testament to the power of execution! Let this trade be the driving force as we continue to learn, grow, and embrace even more success!

Friends, the recent trade has just been closed with a profit seize the opportunity!

In the world of investing, finding the light of certainty is always exhilarating. Thanks to the Ai 4.0 system, its machine learning capabilities allow us to navigate the complexities of the market with ease. A warm congratulations to the future investment

leaders participating in this profit plan!

With the completion of this trade, we have achieved a cumulative return rate of 1220% and approximately 147% total asset return through 10 trades. We are getting closer to our goal!

Now, let's take a more prudent step: invest half of the profits from this contract trade into fixed-income products with a duration of 7 to 90 days. This is not just a suggestion, but a balanced strategy that ensures both offense and defense, protecting your gains while building a solid fortress for your financial security.

Please refrain from posting profit screenshots for now, as I have important tasks to arrange. Be sure to read carefully.

Friends, I want to talk to you about the immense impact of the non-farm payroll data. We all know that the week surrounding the release of non-farm payroll data is when market volatility is at its peak. This means we are entering an investment opportunity filled with potential, as the market gradually digests this

FB Finance Institute - 15th Session

impending shift. We have every reason to maintain a positive outlook and anticipate the exciting opportunities that this weekend will bring.

To seize this opportunity, I am announcing an important plan: This weekend, I will continue to lead you in pursuing our exclusive "Future Leaders" profit target, aiming to rapidly achieve a 200% total asset return rate. This weekend, I will share at least one trading signal each day! Are you ready to join this challenge?

This is not just a challenge—it's our fast track to prosperity. On this path, we are not merely the captains of our fate; it is a choice we must inevitably make. Ignoring the opportunities before us is akin to betraying the passion and fire within our souls. As our ancestors said, diligence and relentless effort are the only ways we can be reborn; this forward moving culture is deeply embedded in our DNA.

This weekend, we stand at a historic turning point, facing a continuation of significant opportunities brought by the most

FB Finance Institute - 15th Session

important non-farm payroll data before a potential rate cut. This is the crucial moment that will lead us to achieve our 200% total asset return target!

When we give our all, fortune often favors the brave, and this truth is self-evident. Life has a remarkable way of rewarding those who do the right thing at the right time. Right now, we are standing at such a pivotal moment. Let's seize this special opportunity over the weekend and write our own investment legend—do you agree?

Today's Learning Outcome Assessment:

1. How much profit did you make today, and are you ready to seize the weekend opportunities?

Today was a day of significant market volatility, and I hope everyone took advantage of it. If you made a good profit, congratulations! If not, don't be discouraged—there are more opportunities awaiting us this weekend.

2. How many trades did you participate in during the two internal

testing plans and the Future Leaders 200% Profit Plan? Are you satisfied with the current win rate and total profits?

Please take a moment to review your performance in these two plans. How many trades did you participate in? Did the win rate and total profits meet your expectations? If there were any shortcomings, let's reflect and adjust our strategies accordingly.

3. What challenges did you face in your trades this week, and what were the causes? Do you have feasible solutions or suggestions?

The challenges we encounter in trading are the foundation of our growth. Please describe the problems you faced in detail and what you believe caused them. Share your solutions and suggestions so we can all improve together.

Friends, whether you've had successes or setbacks over the past few days, now is the best time to start afresh. Send your answers directly to me—your feedback is crucial to me! See you tomorrow, and have a great weekend!
