Dear friends, family, and esteemed future investment leaders, good morning!

Yesterday was a pivotal day for us:

- We delved into the Sam Rule, the "Watanabe Mrs." case, and the significant impact of Buffett's substantial stock sell off on the stock market's medium term outlook. We once again emphasized and refined our investment focus.

- Thanks to the support of the trading center and everyone involved, we successfully implemented the institute token market value management plan. The price of the institute token surged

FB Finance Institute - 15th Session

yesterday, which is an exciting step towards ensuring the smooth listing of the Ai4.0 system, sharing the institute's dividends, and protecting the interests of investors and shareholders!

- The Strategic Partner Investment Cooperation Plan is proceeding smoothly. Those who were well prepared have already started to pull ahead, showcasing extraordinary potential.

As we emerge from the shadow of the stock market and refocus on our grand and clearly visible goals, we must not relax our efforts. This is a marathon between you and yourself. We need to collaborate more closely as a team, employ efficient strategies and execution, and maintain our rhythm to stay far ahead.

This week, I have a series of important actions planned, where I will share universal techniques proven in practice to help you improve. We will focus on the following core themes:

1. Sharing a universal technique from practical experience to help everyone enhance their trading skills. These techniques have been validated multiple times and can maintain stable returns in

FB Finance Institute - 15th Session

different market environments.

2. Skillfully leveraging capital advantages to seize more opportunities in the market and maximize returns.

3. The cryptocurrency market is brewing opportunities that we aim to capitalize on.

I will share more details on these core themes shortly.

Important Reminder: I have just shared the latest trading signal in the respective Strategic Partner Groups.

You already have a strong financial foundation, and now is the perfect time to showcase your skills! In practice, how can you minimize risk and maximize profit? The answer lies in breaking down the trend. This is a fundamental wisdom that occurs in every movement, though it requires some skill to master. Today, I will reveal the secrets behind it: mastering the N-shaped pattern and the clever use of funds, explained in detail through practical case studies.

Yesterday, "Shark" shared the profound idea that "missing the first opportunity is equivalent to missing the last one," reminding us of the urgency of the Strategic Partner Investment Cooperation Plan. The secret to compound growth lies in the dual power of time and principal; as the principal accumulates, so does the profit. However, the cooperation period for this plan is fixed, with most people's contracts ending on November 1. With limited trading opportunities, missing one signal could impact overall returns.

Act now and seize every trading signal—this is our shared responsibility. Each decision is a step towards our financial goals. We are working not just for individual gain but for the collective success of the entire team.

Dear Friends, to ensure that we successfully achieve the goals of this profit plan, I need your full cooperation and active participation. Only those with high aspirations and the courage to pursue beyond expectation goals will reap the desired results—and possibly some unexpected surprises. So, how

FB Finance Institute - 15th Session

exactly can we do this?

1. Increase the Capture of Trading Signals

To lay a solid foundation, I will moderately increase the capture of trading signals, especially in the near term. This week's signals are particularly crucial. This will help us establish a strong base.

2. Seize Recent Trading Opportunities

Those participating in the plan must seize every trading opportunity. If you are preparing to join the trading plan, make sure to get everything in place quickly and join the relevant trading signal group as soon as possible. Time is money, and opportunities are fleeting—acting swiftly is the key to success.

For those who have reached an agreement but have yet to sign the contract, if you do not fulfill your obligations within the agreed timeframe, we may refuse to sign the cooperation contract depending on the situation. If too many early trading opportunities are missed, I cannot guarantee achieving the expected profit target within the agreed timeframe. I believe you

FB Finance Institute - 15th Session

can understand this. We need partners who are fully committed and ready to act quickly, so we can work together towards our goals.

This Friday or Saturday, I will dedicate more time to completing a "Trading Action." It's important to note that on Thursday, Harris and other Democrats will hold a high level meeting with leaders in the crypto industry. This meeting could have a significant impact on the market. Therefore, our action target is to achieve over 500% profit! Please be aware and prepare in advance!

The future belongs to those who are ready and brave enough to pursue their dreams. By increasing the capture of trading signals and seizing every opportunity, we will quickly move closer to our predetermined goals!

Dear Friends, do you remember the short term 10-40% growth opportunity in the crypto spot market that I mentioned on Monday? If you noticed BTC's strong rebound yesterday, you should already be feeling this. The corresponding contract trading profit potential could reach 1000-4000%. This is a huge opportunity that cannot be missed!

Now, I will share with you the certainty of this crypto market rebound. The crypto market has always been highly volatile, but there are currently several key factors that give us a unique

advantage and certainty in positioning BTC in the spot market:

1. Halving-Driven Bull Cycles: Every halving reduces supply, which in turn drives up prices.
2. Institutional Deep Engagement: Increasing institutional investor participation adds stability and growth potential to the market.
3. Bipartisan Support for BTC in Elections: Regardless of which party wins, BTC will benefit from broader policy support.
4. Historically Low BTC on Exchanges: This indicates reduced market supply, stronger holder confidence, and lower selling pressure.

I particularly emphasize the fourth point, as it is a crucial market signal indicating reduced supply and increased market confidence. The long term holding behavior of both retail and institutional investors further supports this trend, reducing selling pressure and enhancing price stability. These factors collectively indicate that the BTC spot market has unique advantages and certainty, making a significant future price increase inevitable.

What is the result of certainty combined with high volatility? It means that BTC's rebound speed will far exceed that of most stocks—faster and more powerful!

Therefore, now is the perfect time to get involved. The value of contract trading will also increase significantly, allowing us to better achieve our profit plan. Can you understand the logic behind this?

Alright, friends, while we wait for new trends to emerge, I want to share some important points that will directly determine everyone's earnings, so please read carefully!

As your guide, I fully understand the responsibility and mission I carry. Today, I will continue to share how to leverage the unique advantages of the Strategic Partner Group to amplify our profit potential. Yesterday, I covered the first four points, and today I will detail points 5 through 9.

Point 5: Priority Access to Trading Signals

To better serve potential supporters of the Ai4.0 institutional edition and to balance risk control with profit growth, I have decided to implement the following measures:

1. Priority Trading Signal Sharing

Regardless of whether the trading signals are based on small cycle charts, I will prioritize sending them to members of the higher level Strategic Partner Group. This will ensure you receive the most valuable trading information first, maximizing your profit potential.

2. Combined Mid-Short Term Strategy Sharing

Depending on different market conditions and opportunities, I will share strategies that combine mid-short term approaches within the Strategic Partner Group (for example, this trade today) to maximize profit potential. Flexibly using mid-short term strategies allows us to better navigate market fluctuations and seize every profit opportunity.

3. Increased Sharing of Trading Signals

I will dedicate more time to sharing trading signals within the Strategic Partner Group, aiming to exceed the target returns of this profit plan. More trading signals mean more opportunities, and each signal is a stepping stone to our success.

4. Risk Mitigation

To minimize risk as much as possible, once a trading signal has been shared and the trend confirmed, I will refrain from sharing the signal in lower level groups (such as the current group) if the best buying and selling times have been missed.

Trading signals are highly time sensitive, and I do not want anyone to take unnecessary risks because of my signals. This is out of responsibility to everyone and is my commitment. I hope everyone can understand and support my decision.

Through these measures, I am committed to providing a more professional, efficient, and safe trading environment within the Strategic Partner Group, while ensuring that every member

experiences better growth and success here. We are about to face a market full of opportunities and challenges; united, we can create brilliance together.

Point 6: The Broad Opportunities of Multi-Timeframe Trading Participation

The logic behind having more capital to participate in larger trading timeframe charts is best illustrated by today's trade. Simply put, it's about increasing frequency through short term trades and capturing larger trend differentials with mid term trading—these are the two core strategies for achieving additional gains.

The N-shaped movement and its decomposition not only explain the essence of trading but also help us better understand the method of increasing trading frequency, the potential risks of small accounts participating in large timeframe charts, and how large accounts can secure greater profits.

Point 7: Ease and Efficiency in the Trading Process

For members of the Strategic Partner Group with larger capital,

FB Finance Institute - 15th Session

adjusting trading frequency proactively makes trading much easier, especially for those busy investors who don't have the time for high frequency trading. Through 1-2 selected trades per week, even large timeframe trades can achieve excess returns. Particularly, the process of making single trades with returns exceeding 300%, 500%, or even 1000% will be more thrilling yet comfortable. We have already achieved 300% a few times, and this week we will challenge the 500% and even 1000% profit opportunities—these are things you will experience, especially those in higher tier groups with more capital.

Point 8: Precision in Grasping Certain Trends and Entry/Exit Points

The Strategic Partner Group provides a platform that allows large capital account members to focus on selecting and participating in highly certain trends and entry/exit points. This strategy of waiting and choosing is the unique advantage of large capital, ensuring a high success rate for each trade through more precise timing.

Point 9: Reducing Trading Difficulty and Enhancing Comfort

Finding the perfect balance between offense and defense reduces trading difficulty, significantly enhancing the comfort of the trading process. The support and strategic guidance provided by the Strategic Partner Group allow large capital accounts to better balance offense and defense in trading, enjoying a low difficulty, high comfort trading experience.

Dear Friends,

By joining the Strategic Partner Group, you not only gain the ability to learn and apply effective investment strategies but also significantly improve in areas such as capital management, risk control, and profit maximization. Let's summarize the unparalleled advantages of the Strategic Partner Group based on what we've discussed yesterday and today:

1. Precise Capital Management

By investing in long term trends and adopting small position strategies, we achieve a balance between maximizing profits and minimizing risks. Precise capital management ensures that every trade becomes more stable and efficient.

2. Power of Capital

Ample capital serves as both our offensive weapon and defensive shield. Through the power of compounding and diversified strategies, we can achieve low risk, high reward scenarios, maximizing our profit potential.

3. The Art of Offense and Defense

While pursuing maximum profits, we also prioritize the safety of our capital. The Strategic Partner Group achieves a perfect balance between offense and defense through clever strategies.

4. Opportunities in Larger Trading Timeframes

By choosing larger trading timeframes, we can capture broader market trends and multiply our profits. These long term trading opportunities provide us with more stable and substantial returns.

5. Priority Access to Trading Signals

Members of the Strategic Partner Group receive priority access to trading signals, reducing risk and quickly seizing market

opportunities, leading to rapid profit growth.

6. Broad Participation Across Trading Timeframes

By combining mid term and short term trading signals with capital allocation, members can participate in a wider range of trading timeframes, enhancing profit potential. Across different timeframes, we can find suitable opportunities for multi-dimensional gains.

7. Ease and Efficiency in Trading

For those with busy schedules, selecting a few high efficiency trades allows for achieving excess returns. Trading becomes easy and efficient, without the fatigue from frequent operations.

8. Precision in Capturing Certain Trends

The Strategic Partner Group allows us to focus more on highly certain trends and entry/exit points, leveraging the unique advantages of large capital to precisely seize every trading opportunity.

9. Reduced Trading Difficulty

By optimizing offense and defense strategies, we enhance the comfort and success rate of trading. The low difficulty, high comfort trading experience allows every member to confidently navigate market fluctuations.

AI 4.0 Strategic Partner Investment Plan

Dear Friends,

I want to extend my warmest congratulations to everyone who participated in today's trade! Through our collective efforts, each Strategic Partner group has achieved stable profits:

- Associate Strategic Partner: Approximately 70% profit
- Intermediate Strategic Partner: Approximately 90% profit
- Senior Strategic Partner: Approximately 130% profit

FB Finance Institute - 15th Session

- Principal Strategic Partner: Approximately 160% profit
- Executive Strategic Partner: Approximately 200% profit
- Managing Director of Strategic Partnerships: Approximately 260% profit

So far, the first four Strategic Partner groups have received two trading signals each, achieving the following total asset returns:

Associate Strategic Partner: 14.35%

Intermediate Strategic Partner: 21.19%

Senior Strategic Partner: 26.76%

Principal Strategic Partner: 33.10%

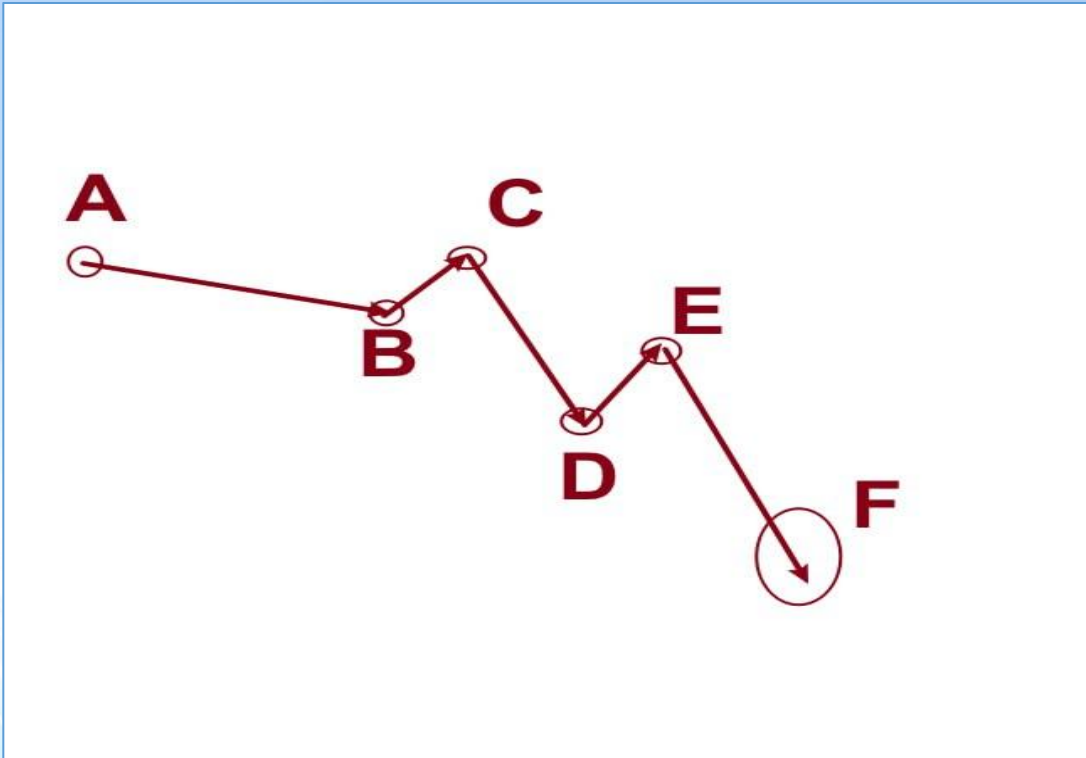

The highest-level groups, having received more trading signals, have secured even more impressive total asset returns:

Executive Strategic Partner: 48.44%

Managing Director of Strategic Partnerships: 59.06%

These outstanding results not only validate our strategies and efforts but also lay a solid foundation for our future success. We will continue to leverage our advantages, seize every trading

opportunity, and achieve even greater profits and returns.

Dear Friends,

In today's discussion, I mentioned that the "N-shaped" pattern is ever present and represents the essence of trading, while the "N-shaped" decomposition is the shortcut to the temple. Now, let's unveil the magical secrets behind it.

Today's trade was analyzed based on a combination of the 5-minute and 15-minute charts:

1. On both the 5-minute and 15-minute charts, the price showed a consolidation and pullback trend, as illustrated by segment A-B.
2. On the 5-minute chart, the price made a slight rise to point C, while the MACD Histogram shortened above the zero axis, forming a sell signal.

These two points were the core basis for the Ai4.0 system to suggest creating a short position: the longer trend was downward, and the price rebound formed a sell point.

3. As the price began to fall, we started to see profits. On the 5-minute chart, the profit on this contract order reached over 90%. However, due to significant price deviation (point D), we issued a closing instruction to the Intermediate Strategic Partner and Associate Strategic Partner groups, resulting in profits of approximately 90% and 70%, respectively.

Meanwhile, the 15-minute chart showed strong performance, so the other four groups, due to their capital advantage, disregarded this minor fluctuation.

4. The price then slightly rebounded to point E, encountered resistance, and continued to fall. When the price reached the F range, with significant deviation, we began closing positions gradually.

Due to the favorable trend, the higher level groups achieved even greater profits.

Today's trade was a great success. Have you understood the power of the "N-shaped" decomposition and the advantages of a well funded account?

Today's performance once again demonstrates the strength and cohesion of our team. Through precise capital management, ample financial resources, smart offensive and defensive strategies, the integration of large and small cycle trading opportunities, priority access to trading signals, broad participation across different trading cycles, an efficient and easy trading process, accurate trend identification, and reduced trading difficulty, we've achieved remarkable results within our various partner groups, laying a solid foundation for stable compound growth.

These successes fill us with even greater confidence for the future. We will continue to leverage our strengths, seize every trading opportunity, and realize even more profit and higher returns.

At 3:30 PM ET, the Options Wizard will share customized strategies for our decisive battles and lead us into the next round of trading. Don't miss this important moment!

Wishing you all a wonderful day!

Closing Commentary

Dear students, good afternoon. This is James Wilson bringing you the latest market investment analysis. This afternoon, I'll be sharing insights on several key topics: What does the future hold for BTC? Is the rebound in the U.S. stock market after the oversell a new opportunity or just a bull trap? How does the Strategic Partner Plan tailor a combination of trading strategies for you? And, what is the most reliable and profitable strategy for the

FB Finance Institute - 15th Session

current U.S. stock and cryptocurrency markets?

Friends, I need your support. The competition between Mr. B and me is still fierce; the 20 consecutive wins trading strategy that I've tailored will outperform Mr. B's returns, proving that I am the best candidate for the next Chief Practical Instructor. Whether it's stocks, options, or cryptocurrencies, I am confident I can lead you to profitability.

Please continue to vote for me and support our journey towards even greater investment success!

In our last session, we discussed the Gungnir technical pattern, which signals a trend reversal when it appears. Since the Gungnir pattern emerged on Monday, BTC has risen by approximately 3,700 points. From a spot market perspective, this represents about a 6% profit margin, but from a contract perspective, this has already created a doubling opportunity. We can compare this to the difference in profits between stock price increases and their corresponding options. Clearly, contracts offer higher returns. So, what does the future hold for BTC? I firmly believe a bull market is on the horizon for two key reasons:

1. The appearance of the Gungnir pattern on a daily chart indicates a very strong bullish reversal trend. Once this technical pattern is established, the market is likely to continue its bullish trend with sustained upward movement.
2. Tomorrow evening, a meeting between Harris and other U.S. Democrats with figures in the crypto industry is scheduled. If everything goes as expected, Harris is likely to announce a series of pro-crypto campaign promises to win over the crypto vote. This means that regardless of who wins the presidential election, it will be a significant positive for the crypto market. Simply put, the uncertainty surrounding the election will turn into a definite advantage for cryptocurrencies.

So, to reiterate the point I made in our last session, this week is the best time to get on board with cryptocurrencies. The trend for Bitcoin in 2024/2025 will be upward. Our strategy should be to buy on dips and secure the most certain profits. If you're unsure how to maximize your returns, please contact me immediately.

We can see that the recent rebound in U.S. stock indices aligns with my expectations. However, some of you might wonder if this

significant drop has formed the Gungnir pattern in the U.S. stock market. The answer is no because the trading volume has not met the necessary criteria for this pattern. So, the U.S. stock market is still in a clear downtrend. What should we do in a downtrend? As I clearly explained in the last session, rebounds are selling opportunities because there will be even cheaper entry points in the future. Let me break it down for you:

First, did the unwind of carry trades contribute to Monday's crash?

J.P. Morgan has issued a warning that the yen remains one of the most undervalued currencies, and the unwinding of carry trades is only halfway through; it hasn't ended yet. Concerns about global economic growth and the potential recession in the U.S. have added fuel to the fire, ultimately leading to the market plunge. In the short term, carry trades are unlikely to return to pre-yen rebound levels, and the best case scenario for the market is to stabilize at the current level, at most.

Second, the main problem in the U.S. stock market is the

economy. What is the future of our economy?

1. Will the Fed Implement an Emergency Rate Cut Before September?

Nick, the Federal Reserve's mouthpiece, has indicated that the recent market downturn has heightened the risk of recession and financial instability. However, the Fed just laid the groundwork for a 25 basis point rate cut in September. For the Fed to take more drastic action, we would need to see the economic outlook deteriorate significantly in the coming weeks. My view is that if an "emergency meeting" occurs before September, the U.S. stock market will plummet. This would signal that the "economic issues are more severe than we thought," causing even greater panic in the market.

2. Will Market Turmoil Threaten the Economy?

If the market experiences significant sell offs, it could lead to more companies beginning to lay off workers, exacerbating economic risks. Sometimes, economic expectations can become self fulfilling. Business owners, seeing the market plunge and

fearing future economic challenges, may respond by laying off large numbers of employees. The result could be a recession that otherwise might not have occurred.

Summary: The trend of volatility and adjustment in the U.S. stock market will likely continue. In the near term, our strategy should be to exit stocks at relatively high points during rebounds. If you review all my previous course notes, you'll notice a common theme: had you followed my strategies, you would have avoided all the wrong moves. In the investment market, the most crucial element isn't just technical analysis or theory but rather extensive trading experience. Fortunately, I can leverage my experience to help you achieve consistent profits in the market. So what does a foolproof strategy look like?

To find out, keep reading:

Why am I committed to helping you achieve consistent profits? It's not just because I'm willing to share my trading insights but also because it's in my best interest. For me, leading one person to profit is no different from leading a hundred people to profit—I

FB Finance Institute - 15th Session

have the ability to make it happen. I won't make empty promises like politicians seeking votes. All I need to do is share my trading signals with you as I trade, and that's it. It's simple, isn't it? If I lead you to a 20 win streak of profits, would you really support Mr. B instead of me? So, with this 20 win streak, just follow my lead. If I make money, you will too. In the Strategic Partner contract, there's a clear Bet-on Agreement:

If you don't achieve the profit target within the contract period, we will cover the shortfall! This is what we call a "no risk, guaranteed profit" deal. We're in a mutually beneficial relationship. If I can make money, I can certainly help you make money; when you profit, the AI4.0 system becomes more valuable; when the AI4.0 system becomes more valuable, the Institute tokens will skyrocket. When the Institute tokens skyrocket, we all stand to make a lot of money. So, this is a perfect plan. All you need to do is execute the trades strictly according to the signals. The only condition is that you must support me.

However, I must clarify that achieving "no loss, and guaranteed

FB Finance Institute - 15th Session

profit" requires both capability and the right market conditions. It's not something that can be accomplished in just any market or with any amount of capital. To consistently make profits without losses, you need a substantial capital base combined with once in a lifetime market opportunities.

Let me give you an example: If you had Buffett's capital, simply by repeatedly executing the Sell Put and Covered Call strategies, you could achieve no loss, and guaranteed profit. Think about it— isn't this the truth?

Sell Put results in either buying stocks at an ideal price or earning the premium if the stock doesn't reach the strike price.

Covered Call results in either selling stocks at an ideal price or earning the premium if the stock doesn't hit the strike price.

But if you don't even have the capital to buy 100 shares, how can you achieve no loss, and guaranteed profit? The larger the capital, the easier it is to make money; the more capital you have, the more you can earn, and the lower your risk. This principle is

FB Finance Institute - 15th Session

common knowledge in the investment world. The same applies to trading cryptocurrency contracts, which are even simpler than options. I'll be using a compounding strategy, trading with just 5% of the total capital each time. This way, whether the trade is right or wrong, the risk remains controlled, and ultimately, the outcome is profitable. As the capital grows, my profits will increase as well—this is the essence of the no loss, guaranteed profit strategy.

AI 4.0 Strategic Partner Investment Plan												
Strategic Partner Group Name	Associate Strategic Partner		Intermediate Strategic Partner		Senior Strategic Partner		Principal Strategic Partner		Executive Strategic Partner		Managing Director of Strategic Partnerships	
Capital Requirement	50K-150K		160K-300K		310K-800K		810K-1.5M		1.51M-3M		5M+	
Total Asset Return Target	300%		500%		600%		700%		800%		1000%	
Date	Performance		Performance		Performance		Performance		Performance		Performance	
	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)	Cumulative Rate of Return (Minimum)	Total Assets Compound Growth Rate (Minimum)
8/5/2024	120%	12.00%	180%	18.00%	220%	22.00%	270%	27.00%	310%	31.00%	350%	35.00%
8/6/2024	—	—	—	—	—	—	—	—	540%	40.04%	660%	47.56%
8/7/2024	190%	14.35%	270%	21.19%	350%	26.76%	430%	33.10%	740%	48.44%	920%	59.06%

It's clear that different groups yield entirely different profits, and the reason is simple. Everyone's capital, trading style, and time availability vary, so a personalized strategy is essential for execution. Just like with options, without sufficient margin, many

of the guaranteed profit strategies I offer can't be executed. Even if you receive the signal, you might not be able to act on it, or if you do, the outcome could be completely different.

That's why it's crucial to tailor a trading plan based on your individual circumstances. To keep it brief, today I'll be providing a trading signal within our group, which will be the fourth in the 20 consecutive win strategy. As soon as the opportunity arises, I will announce it immediately.

By becoming my strategic partner, I will offer you a custom tailored combination strategy. Additionally, I'll give you a heads up—there's an exceptional options setup signal coming in the U.S. stock market this week. If you need this signal, feel free to reach out to me privately.

Congratulations to all the partners in our group! We've just secured the 4th win in our 20 win streak! As you've seen, by joining our team, I can tailor exclusive trading strategies for you, making profitability seem effortless. Even in a volatile market, we navigate smoothly. Here are the advantages of joining our group: Your trading signals are completely customized, aligned with your capital and trading model, and simulated through the AI 4.0 system. Before you even trade, the AI 4.0 system has already run countless simulations, eliminating all risks and providing only high win rate signals. With this trading mode, and my personal guidance, can you still worry about not making money?

For those who haven't joined the group yet, message me immediately! I will create a personalized trading plan tailored to your specific situation. Additionally, I'll be offering stock options signals periodically, such as this week's best short term opportunity, which I will provide just for you!

For all partners who participated in this trade, please invest 50% of your profits into financial products with a maturity of over a month—these are highly cost effective. You can also purchase the Institute token, which have started a market value management plan, with significant potential for future appreciation! Remember, choosing me, James Wilson, is the smartest decision you've made! Ordinary people achieve success through countless failures, but the smart and exceptional ones follow successful leaders to success. As the classic saying in the investment world goes—follow the trend!
