Good morning, dear students! I'm James Wilson, and time flies—it's Friday again. Are you satisfied with your investment returns this week? As Clark Professor enters his final battle, he has launched the Strategic Partner group. It's clear that the returns from each group have been outstanding! If you haven't joined a group and are not satisfied with your returns this week, please contact me directly. I will tailor a personalized plan for you to help you achieve extraordinary gains.

But please, don't waste any time—find me as soon as possible and join my Strategic Partner group. The market waits for no one!

Making small profits can be achieved with skill, but making big money requires seizing big opportunities. Only by capturing historic market movements can we achieve the goal of financial freedom. Right now, the cryptocurrency bull market is upon us! If you want to elevate your life and your family's to new heights and better enjoy this beautiful world, act now—contact me and follow my twenty-win trading strategy! Don't forget to vote for me; today's morning session is about to begin.

Friends, do you remember the Gungnir technical pattern I discussed on August 5th? Back then, BTC was experiencing a sustained decline due to the influence of stock market sentiment. During this downturn, the trading volume remained stable with no significant changes. However, on August 5th, the trading volume suddenly hit a year to date high, and BTC's price bottomed out, signaling a reversal. This massive spike in volume marked the completion of the Gungnir pattern, indicating the imminent arrival of a super reversal rally!

Since I identified this optimal entry point, BTC has surged by \$8,745. If we had utilized 100x leverage in our contract trading, this would have resulted in approximately 1,500x profit! You see, making big money often requires seizing big opportunities. When an opportunity arises, we must have the courage to grasp it. In life, we only get a few such chances, and missing out could mean losing the path to immense wealth.

Now is still the best time to position yourself—BTC is set to break its all time high this year, surpassing the \$100,000 mark. In this

FB Finance Institute - 15th Session

monumental opportunity, with potential returns exceeding ten thousand times, capturing even a small portion can lead to financial freedom. So, act now, contact me, and join my Strategic Partner Group! Let's seize this super rally together!

The behavior of stock indices and BTC is fundamentally different. Currently, stock indices have established a downtrend channel. In this downtrend, any rebound faces resistance from the MA line, preventing the index from rising smoothly. Instead, it needs to go through repeated oscillations to absorb the pressure from the MA line and clear out the trapped funds at previous highs, which takes time. Therefore, for stocks, these rebounds are the best opportunities to exit. Once the rebound ends, the indices will likely fall again, and after each drop, they might rebound once more, repeating the cycle.

This kind of market is characterized by the saying, "The index rises, but profits don't." The index might rebound, but the stocks you hold might not yield much profit. You hope that stocks will rise a bit more, but as soon as the index's rebound ends and it starts to drop again, you'll notice that your stocks fall even harder. This is the frustrating nature of a "rising index without profits" market. Take BTC as an example: when BTC surges, BTC related stocks might not rise much. However, even a slight pullback in BTC can cause BTC related stocks to plummet. This discrepancy can be particularly frustrating.

Therefore, I recommend selling your stocks during these rebounds and using that capital to invest in cryptocurrency with me.

This doesn't mean that I don't believe in the future of the U.S. stock market. Even during the market crashes last Friday and this Monday, when the streets ran red, I remained steadfast in declaring, "The U.S. stock market will undoubtedly reach new historical highs." In fact, I still hold this view today. I believe the

worst is behind us, but there are still some lingering uncertainties. The decline in the U.S. stock market was caused by multiple factors, including fundamentals, technical aspects, and the reversal of arbitrage trades. However, the market has already experienced this downturn, and the future will inevitably involve repeated oscillations and adjustments before new opportunities emerge.

To prevent reckless trading, I will select a foolproof options strategy for those who support me, please reach out to me privately.

That said, it's undeniable that options aren't performing as well as cryptocurrency contracts right now. Both are forms of contract trading, but cryptocurrency contracts are simpler and yield higher returns. So, what time is it now? It's the crucial moment in my competition with Mr. B for the next chief practical instructor! Naturally, I will choose the market that offers simpler and higher returns. After applying the same technical analysis to both products (cryptocurrency contracts and options), I've found that

cryptocurrency contracts provide more signals, leading to more opportunities for profitable trades. Therefore, I must emphasize once again that in the current market conditions, I will focus primarily on cryptocurrency! I need to demonstrate my value by leading my students to achieve higher and faster returns.

In a short while, I'll continue to seek opportunities in the cryptocurrency market. We've already achieved our fourth consecutive win in the 20 win streak, and friends, are you ready to secure the fifth? Please have your accounts and dollars ready, and stay tuned for my trading signal.

For those of you who've already made profits, I recommend that you take 50% of those earnings and invest them in financial products. In terms of cost effectiveness, financial products with a maturity period of 30 to 90 days are the most advantageous, offering better returns than simply purchasing U.S. Treasury bonds or depositing in a bank. We'll help you grow your assets steadily and quickly, so that when the AI4.0 system goes public, you'll have the funds to subscribe, right? After all, everything we

FB Finance Institute - 15th Session

do is aimed at making money. But right now, I have an even better plan to recommend to all of you.

Joining the strategic partner not only involves following my trading signals with your funds, but I also strongly recommend purchasing the Institute's tokens. These tokens are the dream incubator of the AI4.0 system—without them, the current success of AI4.0 wouldn't be possible. Supporting these tokens is essentially supporting me. Moreover, the Institute's tokens have already launched a market value management plan, with growth potential far surpassing that of NVDA and TSLA stocks.

If you invest \$1 million in NVDA, earning \$500,000 would likely take about a year and a half, during which time the market could fluctuate, making it difficult to sell at the optimal time.

Meanwhile, the Institute's tokens are set to soar as part of the market value management plan. Holding these tokens until the end of the year is expected to yield exponential returns! The reasons are as follows:

1. Token Buyback Plan: Our Institute will buy back its own tokens from the market, reducing circulation and curbing speculation. This makes the tokens more likely to increase in value, enhancing their scarcity and worth.

2. Market Promotion: We've invested heavily in advertising for AI4.0, and as its popularity grows, the tokens' recognition and market influence will continue to rise.

Therefore, holding onto stocks for a few months is less beneficial than holding onto the tokens for the same period. Reallocate your value investment stocks to the Institute's tokens. This way, our investment portfolio will be more balanced, encompassing value investments, financial products, and short term trading.

Similarly, the advantage of having substantial capital lies in creating a more balanced investment portfolio. Investing is different from life; you can't afford to put all your eggs in one basket. The advantages of significant capital include:

1. Risk Diversification: By combining short term, medium term, and value investments, if one area underperforms, another is likely to thrive, ensuring there's always a source of profit.
2. Variety of Investment Opportunities: Larger capital allows you to capture returns from different markets, enhancing the overall potential of your investment portfolio.
3. Risk Hedging: In unfavorable market conditions, substantial funds can lock in gains and minimize losses.

Therefore, I encourage everyone to adopt large scale trading. This way, I can tailor a trading strategy that's more suitable for you, just like a custom-made, high-end suit.

To wrap things up: The long term bullish trend of the U.S. stock market remains unchallenged, but in the short term, it's bound to struggle through a quagmire—this is a historical pattern. On the other hand, Bitcoin, ever since the emergence of the Gungnir signal, has already presented several opportunities to double your investment. And this is just the beginning. By the end of the year, Bitcoin is set to challenge the \$100,000 mark. Imagine how many new billionaires will be born from this wave if you leverage contracts effectively.

So, get your accounts and funds ready, reach out to me, and join our Strategic Partner Group. Let's seize this massive market opportunity and prepare for an explosive surge in wealth!

Closing Commentary

Dear Friends, Family, and Esteemed Future Investment Masters,
good afternoon!

First and foremost, I want to extend my deepest gratitude to the "Wizard" and the "Shark" for their tireless efforts this week. Their invaluable investment insights and strategies have played a significant role in helping everyone achieve remarkable success in the "Strategic Partner Investment Plan" and the "Institute Token Market Value Management Plan"!

Today's session is the most important one of the week. It not only reflects on our achievements but also charts the course for our future. If you haven't fully grasped the future policy direction of the investment market in these past nine days of August; if you're feeling uncertain about the recent rebound in the stock market and unsure of the trends over the next 1-3 months, today's session will offer you a fresh perspective.

If you haven't yet realized that we are at a truly unprecedented historical moment, and you're unsure how to quickly integrate and take consistent, effective action, then today's session is an opportunity you cannot afford to miss.

Additionally, I will continue to closely monitor the Ai4.0 system's data, striving to capture a profit opportunity exceeding 300%, or even 500%. So, stay focused and prepare for this crucial moment!

Yesterday, the "Shark" provided an in-depth analysis of the core logic connecting interest rate hikes, the Federal Reserve, and the stock market, concluding with the compelling notion that "the stock market fears the Federal Reserve's rate cuts." The argument was well reasoned, and the conclusion resonated with many.

Now that the worst may be behind us in the stock market, are we about to see the best opportunities emerge? Or could an even worse scenario still be on the horizon? What will the stock indices do over the next three months? Why should we be cautious of a "sucker rally"? These are the topics I intend to explore today.

FB Finance Institute - 15th Session

Let's start by discussing the relationship between the stock market and elections.

Although public opinion polls and forecasts can offer some insights, the market's performance is the real key. Data shows that since 1928, if the S&P 500 index rises in the three months leading up to an election, the incumbent party retains control of the White House 80% of the time. Conversely, if the market declines, the incumbent party loses control 89% of the time.

For example, in the three months leading up to the 2008 election, the S&P 500 dropped by 24.8%, and Obama won the election. In 2016, the S&P 500 fell by 2.3% in the three months before the election, and Trump led the Republican Party to victory.

Overall, this stock market rule has correctly predicted the outcome in 20 out of the last 24 elections, with an accuracy rate of 83%. So, who will win this election? The market's performance will likely provide the answer, and volatility in the stock indices is inevitable.

Will the market's anxiety dissipate? Beware of the "sucker rally" trap!

The VIX has dropped from 66 to 21, which is a positive sign indicating that the market's "growth panic" might have peaked, and the worst could be behind us. However, some concerns still linger.

The recent "massive stock market sell-off" was driven by fears of an economic recession, sparked by deteriorating economic data, with last Friday's nonfarm payrolls acting as the tipping point.

Many are hoping that the market slump and economic weakness will force the Federal Reserve to cut interest rates, thereby boosting asset prices. However, history teaches us that the Fed's rate cutting cycles don't always bring good news.

In 2001 and 2007, after the Fed began cutting rates, the economy slipped into a recession within months, and the S&P 500 subsequently fell by around 40% and 50%, respectively, over the following years. This is where the term "sucker rally" comes from.

The Ai4.0-Expert and Investment Advisory System indicates that JPMorgan's economists have increased the probability of a

recession this year from 25% to 35%, while Goldman Sachs' economists have raised the likelihood of a recession next year from 15% to 25%.

As the risk of a recession grows, even with Federal Reserve intervention, investors should brace themselves for further market turbulence and the potential for significant declines.

Based on this information, we can draw several important conclusions:

1. Market fluctuations within the next three months are almost inevitable, with an increasing likelihood of an economic recession.
2. Combining “Shark’s” view—the current market fear is rooted in concerns over the Federal Reserve cutting interest rates.
3. Regardless of who the next president is, they will likely want the stock market to continue rising after they take office.

So, has the worst really passed? Not necessarily!

The most effective way to avoid falling into the "sucker rally" trap is to sell during price rebounds and then monitor whether the

daily Bollinger Band middle line begins to trend upward. This strategy allows us to preserve opportunities while avoiding the higher probability of a downside risk. Does everyone understand?

After reaching these crucial conclusions, I believe everyone can better appreciate the value of the new wealth matrix and the Strategic Partner Investment Cooperation Plan that I have been advocating. These plans, like triggering a nuclear fusion, bring us rare opportunities for significant returns while also reminding us of the urgency of time.

This week, we've observed various market performances: the SPX index slightly declined by -0.05%, BTC rose by +4.25%, and the

institute token soared by +40%. Even more encouraging is the Strategic Partner Investment Cooperation Plan's total asset return, which has now reached between +20.48% and +84.84%!

Dear friends, the Strategic Partner Investment Cooperation Plan is not just my “retirement battle” as your practical guide, but also our “crowning battle” to become the kings of the investment market:

- Precise Timing: Whether navigating stock market risks or recovering from losses during market volatility, this action demonstrates our precision and decisiveness in timing.
- Solid Foundation and Challenge: The data from the first two internal testing plans, along with the overachieving results of the Future Leaders 200% Profit Plan, provide us with a solid foundation and confidence. A 300-1000% return is merely the starting point, far from the end!
- Personalized Customization and Mutual Benefit: The design of the partner groups and contracts not only meets personalized

customization needs but also provides guarantees for all participants, ensuring mutual benefits.

- Institute Token and Future Planning: The institute token's market value management and the path to a Nasdaq listing are crucial steps in our future development. This initiative not only ensures mutual benefit but also establishes a long term dividend mechanism for supporters post-Ai4.0 system launch, paving the way for the elite club—Ai Foundation.

- Perfect Balance of Offense and Defense: Contract trading is our offensive weapon, while the institute token and fixed high yield financial products are the cornerstone of our steady defense. The construction of the new wealth matrix will aid in the more stable growth of assets.

So, I firmly believe that these initiatives are not only an elevation of our institute's culture but also a revolutionary action, paving the way for a "city on a hill" — a true king's road to success!

Dear Friends, after this week of working together, I believe everyone has deeply experienced the unique trading experience and significant advantages brought by the Partner Group formation, especially the sense of accomplishment and enjoyment from stable compound growth.

However, our journey has only just begun, and I will continue to optimize our strategies to ensure every member can stand out in this wealth building game.

1. Mid-term Contract Trading

I will continue to personally lead the members of the Strategic Partner Groups in mid term contract trading. You can adjust the trading frequency according to your needs, allowing for greater profit margins while making the entire trading process more relaxed and comfortable.

We seek not only profits but also stability and ease.

2. More Trading Signal Sharing

In the Strategic Partner Groups, I will bring more trading signals to everyone. By employing 'combination trading,' we can capture

more market opportunities and continually increase our yield. Every signal is a step forward towards higher goals.

3. Time-Priority Signal Delivery

For the same type of trading signals, higher level Strategic Partner Groups will receive them first. As seen in yesterday's trade, just a few seconds' difference can sometimes lead to several percentage points, or even more, in profit variation.

Therefore, I sincerely recommend that you join a higher level Strategic Partner Group within your capacity to seize every leading opportunity.

4. One-on-One Guidance

To maximize each member's returns, my trading team will offer 'one on one guidance' services to the Strategic Partner Groups. This way, you can receive professional guidance in every trade, ensuring steady growth in your earnings.

5. Supervision and Inspection Mechanism

I fully understand the importance of trading—it's not just our

profession but our responsibility. Therefore, I will establish a supervision and inspection mechanism within the Strategic Partner Groups to ensure that every trade is executed with precision.

This will allow us to achieve high returns while maintaining low risk. The benefits of this inspection process go beyond ensuring correct trades; it will also help you identify potential issues, further enhancing your investment performance.

6. Targeted Investment Plans

Everyone has different investment needs, and the cryptocurrency market offers a wide variety of profit models. To make your investments more precise, I will create a personalized investment plan tailored to your specific needs.

My investment expertise is vast, covering stocks, futures, cryptocurrencies, forex, gold, commodities, and more. The potential for your wealth growth is limitless.

7. Regular Interaction and Gatherings

A healthy investment mindset and a positive investment attitude

are the foundations of success. Members of the Strategic Partner Groups will have the opportunity to participate in our regular interactions and gatherings, sharing insights and strengthening team cohesion.

Our team typically arranges quarterly trips, although we've been extremely busy lately due to the imminent launch of the Ai4.0 system. However, early next year, we will plan more educational exchanges, team trips, and group charity events.

Those who excel in this program will also have the chance to attend the global launch of the Ai4.0 system application, sharing in this moment of glory.

I am closely monitoring the data from the Ai4.0 system, and I hope to capture a trade opportunity today that could yield 300% or even 500% returns.

Please stay focused, as the peak of this week's profits may well occur today!

Dear friends, future investment masters, if you realize that we are at an unprecedented historical moment but are unsure how to

FB Finance Institute - 15th Session

quickly integrate and take sustained, effective action, then the following insights are absolutely essential for you.

I've noticed that many of you have recently been discussing how to quickly acquire cryptocurrency and the challenges encountered during bank transfers. These issues may be slowing down your progress in participating in our profit plan.

While we wait for the latest data and decisions from the Ai4.0 system, today, I will help you understand the core of these challenges and share some simple and practical solutions. This will enable you to better grasp the current ecosystem of the cryptocurrency market and effectively seize future opportunities.

First, let's revisit the concept of "decentralization."

Do you remember our previous discussions? I once used the Ai4.0 system's sales mechanism to explain how blockchain technology solves trust issues. The core feature of blockchain technology is the "distributed ledger."

Simply put, everyone is recording the rules, and the power of this

FB Finance Institute - 15th Session

distributed ledger lies in the fact that it has no central authority. It is precisely this "decentralization" that gives blockchain technology its disruptive potential.

Understanding this, you can see more clearly that many of the issues we face today stem from the friction between the centralized structure of traditional financial systems and the decentralized nature of cryptocurrency.

Central banks issuing currency and government management are all based on centralized trust. In this system, banks and other financial institutions act as intermediaries and regulators.

However, the drawbacks of centralized management are obvious, such as corruption, inefficiency, insecurity, and high costs, right?

Cryptocurrency, on the other hand, is like a self governing community without a parent. Everyone has their own ledger, all transactions are open and transparent, and everyone supervises together. This decentralized concept does not rely on any central authority (such as banks or governments) to verify and manage transactions, fundamentally changing our understanding of

finance.

Take, for example, the collapse of Silicon Valley Bank in March of last year. This event is akin to a parent going bankrupt due to poor financial management. While the rate hikes were the apparent cause, the core issue was mismanagement, which ultimately led to the collapse of the entire system.

This event made us more aware that decentralized cryptocurrencies can serve as a more reliable and secure form of savings. Right at that moment, the price of Bitcoin soared by 50%.

So, why is there such intense conflict between traditional banks and cryptocurrencies, almost like water and fire? Let's look at it from two perspectives:

1. The Threat of Disintermediation

Cryptocurrencies are like a platform that allows you to trade directly with sellers, bypassing the need for banks as intermediaries. Through blockchain technology, you can conduct

peer-to-peer transactions (which is the essence of C2C), completely bypassing banks.

This directly threatens the position and income sources of banks, especially in core businesses like cross border payments and remittances, which banks heavily rely on.

2. State Control vs. Free Currency

The traditional banking system is like a "remote control" in the hands of the state, allowing it to regulate the money supply and interest rates to ensure economic stability. Cryptocurrencies, on the other hand, are like wild horses running freely across the globe, not controlled by any state.

This "free currency" characteristic greatly weakens the state's control over currency, naturally making governments uneasy.

Because of these two points, anyone attempting to purchase cryptocurrencies through a bank is likely to encounter various issues. Whether it's being refused, having accounts frozen, experiencing transfer delays, or facing restrictions on fund movement, many of us have encountered these situations

firsthand.

When you face these problems, it's understandable to feel helpless or even frustrated. But remember, the bank employees themselves are often powerless to help because their duties require them to act this way.

In the midst of historical change, wherever interests are involved, conflicts will arise. We must learn to adapt within the rules, finding flexible ways to navigate these challenges.

In fact, from everyone's discussions and experiences, you'll find that there are two highly effective solutions:

1. Avoid Domestic Banks, Opt for International Wire Transfers

While international wire transfers may also encounter some obstacles, they tend to be much smoother in comparison. As long as you follow the necessary steps as required by C2C, the issues are generally manageable.

2. Completely Bypass Banks, Opt for Face to Face Cash Transactions

This is an innovative and convenient measure within C2C, allowing you to bypass the cumbersome bank procedures entirely and complete transactions quickly and directly.

These methods are not only convenient but also highly secure, as all C2C transactions are conducted under the supervision of the trading center. The participating merchants must deposit significant amounts of capital to engage in business, and most importantly, they are trusted merchants who have proven their reliability over long periods of cooperation.

Moreover, although C2C transactions are essentially direct trades between users, the trading center provides an escrow service. Specifically, when a transaction is made, the trading center holds the seller's assets in escrow. The cryptocurrency is only released to the buyer once they confirm receipt of the funds. This mechanism effectively avoids the risk of default during the transaction, ensuring that your trade is safe and secure.

By using these methods, you can easily bypass the restrictions imposed by banks while enjoying a fast and secure transaction experience. So, don't let the traditional banking system be a barrier to your entry into the world of cryptocurrencies.

Utilize these smart strategies to smoothly embark on your path to wealth transformation!

Dear Friends, I'm thrilled to have shared so many valuable topics with you today. To help you better understand, let me summarize:

1. Current State and Outlook of the Stock Market

We delved into the stock market situation, noting that while the worst may be over, the best time is not yet here. We analyzed how the election impacts the market, the future trends, and the pitfalls of the "sucker rally," along with strategies to counteract them.

2. This Week's Key Achievements

The data speaks for itself. This week's results have once again

proven the timeliness, foresight, and importance of the Strategic Partner Investment Cooperation Plan. This isn't just our strategy; it's the key battle that will crown us kings of the investment market!

3. Seven Optimization Directions

To ensure that every member excels in this wealth building game, I've summarized seven optimization directions. These aren't just suggestions; they are my commitment to you, ensuring that everyone emerges victorious in this battle.

4. Overcoming Obstacles, Moving Closer to Your Dreams

We also discussed the centralized nature of traditional banks and their hostility towards cryptocurrency investors because it threatens their core interests.

But don't worry—two convenient solutions offered by safe, reliable C2C merchants can help you overcome these obstacles and smoothly embark on your cryptocurrency investment journey.

If you have any questions, feel free to message us, and we'll do our best to assist you. Though today's discussion has come to a close, I'm still working hard to secure a 300% or 500% profit opportunity for everyone. Keep a close eye on the signals in the Strategic Partner group.

If this week's profits aren't yet satisfying, the weekend offers a great opportunity. Let's catch up together! Have a wonderful weekend!

AI 4.0
