

Morning Review

Good morning! Dear students and partners! I'm James Wilson. Golden Friday is here—are you ready to double your profits? Since last Thursday, I've repeatedly emphasized this significant opportunity. I've also stressed the importance of not missing out when the moment arrives. You had a full nine days to prepare for today, and if you valued that time and took action, I'm confident you're ready to earn profits that will truly satisfy you today!

Now, I urge everyone to stay closely tuned for updates. I'll be providing precise real time trading signals—this is an investment feast you absolutely cannot afford to miss!

The man is about to take the stage. The market widely expects him to announce a rate cut in September, but he may remain silent on whether it will be a 50 basis point cut. When that moment comes, the market could experience significant volatility—and that is our opportunity.

All eyes are on Powell's speech, as everyone seeks to grasp his views on the current economic situation, especially given recent employment data falling short of expectations and inflation easing. The market generally expects the Fed to cut rates at the September 17-18 meeting, but there's disagreement over the extent. Most economists predict a 25 basis point cut, but institutions like Citi and JPMorgan believe the Fed might cut by 50 basis points.

Now, Wall Street's focus has shifted from "whether there will be a rate cut" to "how large the rate cut will be." U.S. stock investors face a battle of emotions: if the market is pleased, sentiment will soar, potentially sparking a rally; if disappointed, low spirits could lead to panic selling and a sharp drop. In the cryptocurrency market, however, the opportunity to profit remains regardless of the Fed's decision. We don't need to sift through countless stocks for quality picks—just interpret the data and trade decisively.

Federal Reserve Chair Powell: The time for policy adjustment has arrived!

Congratulations on completing your buy orders! See that? Trading in the cryptocurrency market is that simple. In contrast, the U.S. stock market has thousands of stocks, making it overwhelming to choose from. Picking the stocks with the highest potential for gains undoubtedly adds complexity to the trade. And if you're trading options, you need to consider strike prices, expiration dates, and various Greek letters like Delta, Theta, and Vega, which complicates things to the extreme. But cryptocurrency trading is

FB Finance Institute - 15th Session

straightforward—just identify the right entry point. When a data-driven market event occurs, you don't even need to pick an entry point; you simply follow the market.

Friends, which market do you think is easier to trade in? This is precisely why our recent returns have far outpaced those in the U.S. stock market. The same people, the same technical strategies, the same capital, and the same time frames yield vastly different returns in the crypto market. This is the advantage of choosing the right market.

Congratulations, everyone! Our trade has already started to show profits—can you feel it? Despite the intense market volatility, I prepared thoroughly for this opportunity nine days in advance, and I'm confident in our strategy. This will be our eleventh victory in the 20 win streak, and perhaps the most representative trade of them all! The profits in the cryptocurrency market are truly unbelievable!

And what about the stock market? Hot stocks like NVDA only have

FB Finance Institute - 15th Session

a 3% gain, TSLA is up just 4%, and AAPL is barely moving at 1%. At this moment, the advantage of the cryptocurrency market is crystal clear! Friends, when faced with such a significant, once-a-year opportunity, choosing the wrong market is like missing out on the chance of a lifetime. How many times can you encounter such opportunities in your life?

What does this feel like? It's as if you had the right to buy any asset for \$1, and instead of choosing a mansion or a private jet, you opted for a Big Mac from McDonald's. A chance to change your investment destiny, traded for a mere hamburger—why do you think that is? Doesn't this perfectly illustrate what I always say—choice is greater than effort?

CRAAAAZY!!! Congratulations to all of you! We've just completed the monumental "Golden Friday" trade, and everyone has taken profits! Following the principle of time priority, our team has achieved individual gains of approximately 350%, 380%, 450%, and 500%! Friends, listen up—this is absolutely insane!!!

This is the reward for making the right choices! Without the extensive internal testing of the AI 4.0 system and without identifying the most suitable market for trading, our returns might have been as unremarkable as those of ordinary investors. But in the end, you'll realize that Professor Clark was right—his foresight has brought an even brighter future to the Institute! Let's all praise Professor Clark!

So, my dear friends, are you satisfied with these returns? Please reply to me.

Although our current returns have surpassed Mr. B's, turning the motorcycle riding shark back into the cane wielding shark, I still feel unsatisfied. Why? Because the ultimate goal of investing is to

FB Finance Institute - 15th Session

make money! While everyone has different understandings of investment, and I'm open to embracing these differing views with a mindset of seeking common ground, the truth is, this amount of money just isn't enough! Would you like to hear my perspective?

I believe that for the average person, the money earned from investing must meet at least eight conditions to be considered truly successful. I'd like to discuss these eight things with all of you.

First, health expenses. Good health is the most important thing. Without a strong body, how can we fully experience the beauty of the world? Why do the wealthy often live longer? Because they invest heavily in their health. They enjoy top notch medical services, have their own private doctors, and undergo regular comprehensive health checks and nutrition planning. Their investment in health ensures they can enjoy life's pleasures for a longer time.

For ordinary people, does having a private doctor and high end

medical services seem out of reach? Not necessarily. We should include health investment in our financial plans. Health is our most valuable asset and the foundation of a happy life.

Second, children's education, ensuring they become individuals who contribute more to America. Top tier education in the U.S. is expensive, with tuition fees and a wide range of additional costs. However, it's a high return investment and something I believe we must pursue.

Third, purchasing a primary residence:

Choosing a high quality living environment for yourself and your family is crucial. Factors like location, safety, school district quality, and community amenities should be considered. Investing in a property that meets your family's needs and lifestyle is a wise choice for long-term investment and enhancing your quality of life. A warm and comfortable home isn't just a refuge; it's the starting point for daily happiness.

Fourth, vacation properties:

Owning vacation homes in some of the world's top travel destinations can provide unparalleled enjoyment for you and your family. Whether it's the beaches of Hawaii, the ocean views of Long Island, the snowy landscapes of Hokkaido, the romance of the French Riviera, or the grandeur of the Swiss Alps, these can become your personalized private vacation paradises. Imagine flying directly to your vacation home for a completely private and relaxing getaway—it's an irreplaceable luxury experience. And if you prefer, you could even purchase a vineyard, HAHAHAAAA.

Fifth, cars:

Owning a car you truly love is an enhancement to your quality of life. It doesn't have to be the most expensive model, but it should be a choice that brings you satisfaction and joy. Driving a car you adore makes every journey a pleasure. Unless it's for business reasons, I don't recommend hiring a driver—driving yourself is not just a life experience; it allows you to feel freedom and joy in your everyday life, which is very important.

Sixth, enjoying luxury goods:

You can freely purchase the haute couture, top tier jewelry, and luxury watches you desire. The key is whether you genuinely like these things. Personally, I'm not particularly interested in luxury goods, but I still consider them a symbol of success for investors. After all, luxury items are not only status symbols but also satisfy a sense of vanity.

Seventh, retirement planning:

Why focus on retirement planning? Because the future has an undeniable trait—uncertainty. Look at those who struggle after retirement; this unease makes people realize that preparing for the future is essential. Retirement isn't something to be casually ignored; it's a significant milestone in our lives. An ideal retirement should involve global travel and enjoying the world's beauty, not worrying about daily living. Therefore, we must accumulate enough retirement funds to turn future uncertainties into manageable certainties.

Eighth, supporting family members:

Supporting your family and loved ones is one of life's most meaningful endeavors. Whether it's providing financial support, organizing family vacations, celebrations, or private gatherings, these actions strengthen family bonds and create cherished memories. Helping family members achieve their dreams and goals is not only a responsibility but also a deeply satisfying experience.

My personal perspective might not be universally accepted, as everyone has their own understanding and viewpoint. However, I firmly believe that the ultimate goal of investing is to make more money. If the returns you achieve through investing can meet the eight conditions I mentioned earlier, then you are, in my eyes, the ideal investor. This also proves that you have truly succeeded in the investment market. So, do you think today's profits are enough? Are you truly satisfied?

If you're not yet satisfied, then join my team and vote for me! Our returns have already left "Mr. Shark" far behind, and in the near

FB Finance Institute - 15th Session

future, I will crush Mr. B's spirit with a series of consecutive victories, forcing him to face the reality of the vast gap between us!

Friends, there's an excellent opportunity right now! The investment opportunity in the ICO project is right in front of you. Are you willing to follow me? Let me lead you to the higher echelons of profitability, shall we?

This afternoon, the esteemed Professor Clark will be sharing his exceptional insights. Let's look forward to it together—don't miss it!

Dear Friends, Family, and Esteemed Future Investment Masters,
Good Afternoon!

This week has been filled with excitement and challenges for everyone. The competition between the two future Chief Practical Instructors has reached a fever pitch, with both delivering outstanding performances and bringing substantial paper profits to all. The four Strategic Partner groups led by the Wizard and the Shark have achieved remarkable asset returns as

follows:

Wizard: +117.81%, +162.33%, +224.77%, +307.81%

Shark: +115.19%, +156.61%, +206.47%, +273.80%

Meanwhile, the groups I lead, the Executive Strategic Partner and Managing Director of Strategic Partnerships, completed two trades this week with exceptional asset returns of +387.21% and +528.87%, respectively.

Our Strategic Partner Program is progressing rapidly, not only maintaining a strong lead in the investment market but also bringing us closer to our goals. The steady growth of compound returns gives us confidence in achieving our objectives sooner, while the pre-sale and launching process for AI4.0 will also accelerate. I want to express my deepest gratitude to every family member for your hard work and dedication—your support and contributions are the key to our success!

Dear Friends, this week has undoubtedly been one filled with

FB Finance Institute - 15th Session

surprises and challenges for us all. Our data not only reflects the tremendous success we've achieved but also serves as the driving force that propels us forward. It's worth celebrating that these figures are just a part of the story. Many of you have privately received additional trading signals, leading to even greater, record breaking results—what exhilarating news!

Since the rule adjustments on August 12th, our goals have expanded beyond merely capturing this super profit cycle. We also aim to maximize the benefits before the AI4.0 system goes public. This adjustment was designed to encourage everyone to chase their dreams boldly, instilling a greater sense of achievement and providing more opportunities for us all. Have you also felt this thrilling change?

Particularly after the release of last week's significant economic data, combined with the global central bank meeting, September's non-farm payroll data, and the impact of the expected rate cut, market volatility is set to increase. How we navigate these strong tides and reach higher goals is the topic I

FB Finance Institute - 15th Session

am eager to share with you today. I firmly believe that two powerful investment opportunities are worth our full attention.

First, we must continue to deepen the Strategic Partner Investment Cooperation Plan. Every day is incredibly valuable and should not be missed. If you have not yet signed the cooperation contract, take action immediately. The shorter the cooperation period, the lower our profit targets will be, which is a loss for both sides. Now is the perfect time for us to join forces and create something magnificent. Let's embrace the challenges and realize our dreams together!

The second opportunity is the investment in high-quality ICO/IDO projects.

In the cryptocurrency market, an ICO (Initial Coin Offering) is a unique and compelling investment method. If you're not yet familiar with ICOs, think of them as the crypto equivalent of an IPO (Initial Public Offering) in the stock market. While they operate in different markets, there are many similarities in their principles.

An ICO can be seen as an opportunity for emerging cryptocurrency projects to sell tokens to the public for the first time. Just as in an IPO, where you can buy shares at a relatively low price when the company is still in its early stages and enjoy significant appreciation after it goes public, in an ICO, you can purchase tokens at early-stage prices and wait for their value to increase significantly once they are listed.

Yesterday, the Shark provided an excellent summary of the investment characteristics of high-quality ICOs: they are almost risk-free, offer substantial returns, and have the potential to multiply your investment several times over. The participation period is short, typically completing within a week. Unlike IPOs, ICOs guarantee 100% success in securing tokens, and your investment return depends on the amount of capital you commit. Moreover, the entry threshold is relatively low. Isn't this kind of opportunity truly enticing?

Dear Friends, to help everyone better understand the allure of ICO investments, I would like to illustrate its potential with some

FB Finance Institute - 15th Session

familiar examples.

For instance, Arm Holdings (ARM) filed for an IPO in August 2023, with an initial pricing around \$50. However, recently, its stock price has peaked close to \$200, showcasing the substantial returns possible in medium-term investments. This not only reflects the recognition of the company's inherent value but also represents enormous returns for early investors.

Consider Ethereum (ETH) as another example. From its ICO to its promotion as a spot ETF, Ethereum has undergone a decade of development. During its ICO phase, the token was priced at approximately \$0.30, and today, its all-time high has approached \$5,000, representing a staggering return of over 16,000 times. This fully demonstrates the immense investment potential and long-term value of high-quality ICO projects.

These examples highlight the rarity and potential of premium ICO projects. The trading center we collaborate with is currently leveraging its natural advantages to lead the way in high-quality

ICO/IDO investment opportunities across the industry. Such opportunities are rare—would you be willing to miss out on them?

System Notice

Our company is about to launch an innovative biotech data sharing and collaboration platform - BioChainX.

Dear users,

We are excited to announce the upcoming launch of the 'BioChainX' project, an innovative biotech data sharing and collaboration platform.

Token Name: BCX

Introduction:

BioChainX is an innovative biotechnology data sharing and collaboration platform, which primarily leverages the advantages of blockchain technology to address the challenges faced in the biotechnology field such as data security and privacy protection, scientific research cooperation and data sharing, and the authenticity and credibility of clinical trial data. The project aims to build a secure, transparent, and efficient global biotechnology data sharing and collaboration ecosystem to foster advancements in scientific research, drug development, personalized medicine, and other areas.

The vision of BioChainX is to become the leading global platform for biotechnology data sharing and collaboration, providing safe and efficient data storage, sharing, and collaboration services to researchers, medical institutions, biotechnology companies, and others. Its mission is to integrate blockchain technology with the actual needs of the biotechnology field, driving continuous development and innovation in the biotechnology industry and making a positive contribution to human health and welfare.

Before we move forward, I would like to summarize the key advantages of ICOs compared to stock IPOs. This will help everyone better understand the significance of the upcoming investment opportunities.

1. Early Participation Advantage

Participating in an ICO is like grabbing a limited-edition star product before it becomes wildly popular, allowing you to acquire it at a lower price. On the other hand, buying into a stock IPO is akin to purchasing an already established brand item, where the brand has already gained some market reputation.

Thus, ICOs offer the chance to enter emerging projects at a low price with higher potential returns, while IPOs involve mature brands with limited growth potential.

2. High Return Potential

Investing in an ICO is similar to putting your money into an emerging tech startup, where you have the opportunity to reap substantial rewards if the company succeeds. An IPO, by contrast, is like investing in an already successful large corporation, where

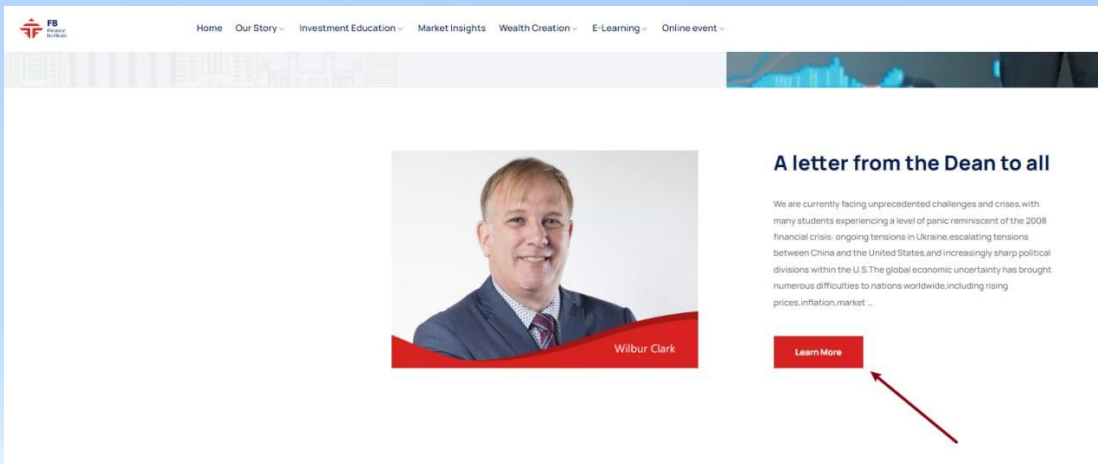

returns are stable but lack the explosive growth potential of an ICO.

ICO projects typically involve cutting-edge technologies, offering significant returns after listing, while IPOs provide steady returns by investing in mature enterprises.

3. Decentralization and Globalization Advantage

ICOs are like a global online marketplace where you can participate in investments from anywhere in the world. In contrast, IPOs are often limited to domestic stock markets, meaning you can only invest in specific markets. Because of this, the investment enthusiasm for ICOs tends to be higher, with greater potential returns.

Now, as it stands, I've come to know that a top-tier ICO project, BioChainX (BCX), which combines biotechnology and blockchain technology, is set to launch next week. The opportunity is right in front of us, and I urge all of you to prepare and actively participate!

Dear Friends, Family, and Esteemed Future Investment Masters,

As the global central bank meeting unfolds and the door to a September rate cut is about to open, we find ourselves at a thrilling historical moment. My heart is filled with emotion, and I cannot help but recall the difficult days of 2022—a time when the market environment of rising interest rates posed immense challenges for us. Many of our veteran students might vividly remember that period, while new friends can revisit the letters we wrote to you on our website to understand that arduous journey.

From the depths of the stock market, to the pre-sale stage of the

FB Finance Institute - 15th Session

Ai4.0 system, and the remarkable achievements of our Strategic Partner Program, we have together traversed some of the most significant phases of our lives. I firmly believe that one phrase best summarizes our journey: “Our success is built on steadfast principles and beliefs.” What are our beliefs? They are “Students First” and “Practice is the Best Teacher.”

Today, as we stand on the threshold of success, I wonder if you have already sensed the new challenges that lie ahead. Friends, family, future masters, please take a moment to carefully read my message today—it will reveal the essence of the economic cycle, help you grasp the pulse of the economy, uncover the secrets of currency, and face the imminent challenges and decisions head-on! This will be an essential course you cannot afford to miss, and we will begin with a fairy tale that holds profound meaning.

In Hans Christian Andersen's fairy tale, there is a story about a little girl named Karen, which goes roughly like this:

There was a little girl named Karen. After her mother passed away,

FB Finance Institute - 15th Session

she was adopted by a wealthy old lady. As she grew up, Karen became very vain and extravagant. One day, she got a pair of red shoes and became so fond of them that she even wore them to church. Despite the pastor laying his hands on her head and speaking about the responsibilities of a Christian, Karen's thoughts were entirely focused on her red shoes.

The old lady advised her to wear black shoes on such solemn occasions, but Karen ignored the warning and wore the red shoes to church again. After leaving the church, she found herself uncontrollably dancing, until others helped her remove the shoes. Karen continued to wear the red shoes to parties, gradually being controlled by the shoes. Whether it was day or night, rain or shine, she couldn't stop dancing.

In the end, Karen could no longer stop dancing. She prayed for help from an angel. The angel told her that she would only stop dancing when she danced herself to death.

.....

This story will be very helpful in understanding inflation, interest rate hikes, rate cuts, impacts, and decision-making.

First, let us delve into the root causes of this round of high inflation.

Many people may attribute it to Russia's invasion of Ukraine or the COVID-19 pandemic, but these are merely surface factors. The real underlying cause lies in the Federal Reserve's aggressive money printing and the government's massive spending. As the global currency, the inflation of the US dollar is almost equivalent to global inflation, affecting all countries and individuals who use fiat currency.

In this most severe dollar inflation in 40 years, the biggest beneficiaries are those individuals and institutions with the most debt. For example, if you borrowed \$500,000 to buy a house in the city center 20 years ago, and now you only have to pay back \$500,000, in reality, your debt cost has significantly decreased. This is because in a high inflation environment, debtors repay

their debts at past lower costs with current high-inflation amounts, thereby benefiting from the situation.

In this global inflation scenario, those with the most debt become the biggest winners.

Without a doubt, the institutions with the most debt are the central governments of various countries, including our federal government.

Historically, almost every severe inflation has been deliberately engineered by governments through the actions of central banks. Therefore, we must rationally understand that this inflation is not merely an economic phenomenon but also a product of policy.

By deeply understanding the essence of currency, we realize that it is essentially a form of government debt owed to its citizens. Moderate inflation acts as an invisible "monetary tax," a clever method of taxation and one of the three primary tools (taxation, inflation, and asset management) that governments use to maintain fiscal health. Does this understanding give you a more profound insight into the current economic environment?

When inflation becomes too severe, ordinary people feel an increased pressure on their lives, and this hidden tax becomes exposed, becoming overt and difficult to sustain. Therefore, governments tend to control inflation at a moderate level (typically below 3%) to avoid the social and economic issues caused by hyperinflation.

Since no one likes to be directly taxed, people often choose to combat the "monetary tax" by purchasing assets such as real estate, stocks, and commodities. Inflation not only drives up prices but also boosts the value of housing, stocks, and commodities. In this context, although the cost of living rises, the growth in asset prices becomes more advantageous. Both the wealthy and governments welcome the wealth effect brought about by inflation.

After a round of interest rate hikes, while bubbles may burst, wealth does not disappear because assets still exist. The government can "reclaim" the monetary tax by lowering interest rates, thereby raising asset prices.

However, both raising and lowering interest rates must be done in moderation, as overdoing either can lead to economic recession and high unemployment, which has a particularly severe impact on low-income groups.

Dear Friends, Family, and Esteemed Future Investment Masters,

Have you noticed that monetary policy operates like a precise timing mechanism: rapidly raising interest rates when the economy overheats and lowering them just in time before a recession hits.

By understanding this cycle, you can grasp the Federal Reserve's true stance on high inflation: to use every means possible to suppress inflation before a recession arrives.

This strategy is designed to pave the way for a new round of interest rate cuts, thereby reactivating the "monetary tax" mechanism.

Interest rate hikes can burst asset bubbles, while rate cuts push asset prices upward, creating a wealth effect. This wealth effect

makes the middle class feel richer due to asset appreciation, leading to increased consumption; the wealthy and businesses expand their investments; and the state takes advantage of this opportunity to support business innovation, promoting rapid money circulation and stimulating economic prosperity!

In any country, the cycle of asset appreciation, bubble formation, and eventual burst carries deep significance. The "management" of currency and interest rates functions like a modern-day money tree, redistributing wealth, alleviating social stratification, creating new opportunities, and maintaining societal vitality.

This approach is far less destructive to social order than war or violent revolution, while ensuring that the government remains in a dominant position in this ongoing game.

US National Debt and Budget Spending

The national debt is what the US government owes to its creditors. Money is borrowed to cover the budget deficit and to pay expenses.

Data as of July 26, 2024.

Understanding these economic dynamics allows us to gain deeper insight into the current economic situation: the Federal Reserve’s excessive money printing, the Treasury’s massive debt issuance, and the government’s generous spending. This monetary stimulus is akin to the red shoes in Andersen’s fairy tale, while our

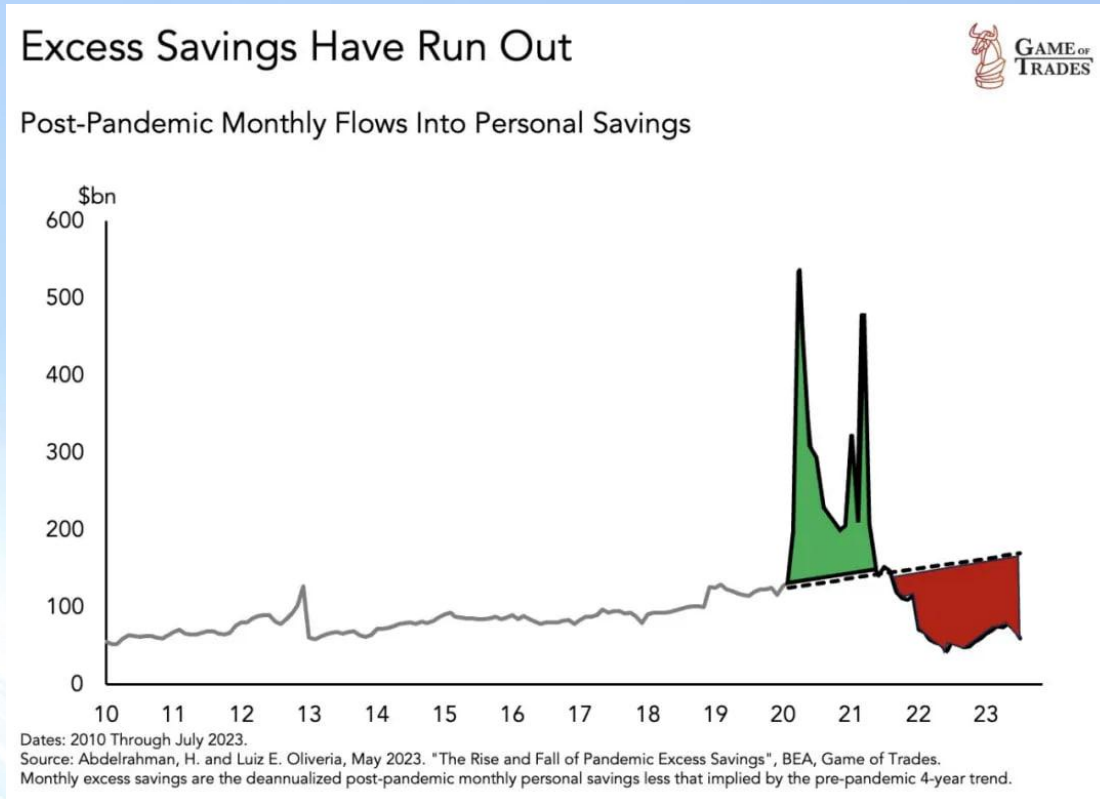

economy (or government) resembles the little girl named Karen. Karen's inability to stop dancing parallels the uncontrollable growth of the national debt, now reaching \$35 trillion.

In the fairy tale, Karen eventually finds an executioner who cuts off her feet. Although her feet, still wearing the red shoes, continue to dance endlessly, Karen can finally stand with crutches and find peace. An angel, bearing roses, forgives her, and her soul ascends to a world free of red shoes.

Fairy tales often weave warm endings, but the harshness of reality is seldom as comforting as a storybook conclusion.

In our real world, despite the Federal Reserve's and the government's policy efforts to address these issues, the uncontrollable growth of debt and the loss of monetary control continue to have profound effects on the economy and society. Let us face these economic challenges with a clear mind and steadfast resolve.

Dear Friends, Family, and Esteemed Future Investment Masters,

Reflecting on the unique period of the pandemic, many of our families accumulated some savings from the “heaven-sent rain,” but now those savings have vanished like shooting stars. The national savings rate, after a brief surge, has quickly plummeted to a low point.

Looking at this chart, it feels as if the story of Karen from Andersen’s fairy tale is replaying before our eyes, bringing with it

FB Finance Institute - 15th Session

a deep sense of fear.

As ordinary people, are we also experiencing this dramatic shift firsthand?

The small benefits we once received from government spending now seem to come with a heavy price due to the interest rate hike and cut cycles. Rising living costs, declining purchasing power, devalued savings, income instability, and widening wealth gaps.....are these challenges already creeping into our lives?

By deeply understanding all of this, have you, like me, realized through our practical learning and profits during this period that the inherent inflation-resistant nature, long-term appreciation potential, and decentralized freedom of cryptocurrencies are the key to breaking this impasse?

- In the fairy tale, the "red shoes" symbolize desire.
- In reality, inflation is like those red shoes, constantly driving us to pursue more wealth.
- However, the traditional financial system, like the feet that were

cut off, cannot satisfy our longing for financial freedom.

- Cryptocurrencies, on the other hand, are like brand new dance shoes, allowing us to regain our stride in the pursuit of financial freedom.

In this era of transformation, cryptocurrency shines like a brilliant star, illuminating our path to financial freedom. It is a digital scarce asset, free from the constraints of government monetary policies, and its value has been steadily and rapidly rising over time, surpassing even gold as the ideal choice for hedging against inflation and financial crises.

Imagine holding cryptocurrency in your hands, where your wealth is no longer limited by bank interest rates and government policies, but entirely within your control. Doesn't this new financial experience make your heart race with excitement?

I firmly believe that you have already grasped a key truth: owning cryptocurrency is embracing true freedom!

Now, as a new wave of cryptocurrency's super bull market

FB Finance Institute - 15th Session

approaches, it offers an exceptional opportunity for you to turn the tide and realize your dreams. Our carefully crafted investment plan is the shortcut for you to enter the market, lay a solid foundation, and quickly accumulate wealth.

While traditional banks' resistance to cryptocurrency may leave you puzzled, this is precisely the storm of financial revolution. Many friends have overcome obstacles through innovative methods like face-to-face cash transactions—this flexible approach is something we should learn from and emulate.

The more cryptocurrency you hold in your account, the closer you are to achieving the dream of true freedom. Are you ready to embrace this new era filled with unlimited opportunities? And isn't now the perfect time to take action?

Dear Friends, Family, and Future Investment Masters,

Today, let's use a simple way to understand economic phenomena

FB Finance Institute - 15th Session

like inflation, interest rate hikes, and cuts. We'll revisit our financial world through the lens of Andersen's story. Let's summarize it briefly:

1. Story Background

The little girl Karen received a pair of red shoes, much like the Federal Reserve's excessive money printing. She was enchanted by them, dancing uncontrollably, just as we may be initially drawn to seemingly beneficial economic policies that ultimately become burdensome. Karen's story has a warm ending, but real life isn't so simple.

2. The Essence of Inflation

High inflation is like the "super red shoes" effect caused by the Fed's massive money printing and government spending. The devaluation of the dollar impacts the global economy. Those with the most debt become the winners, as the government "secretly taxes" through inflation, easing its debt burden.

3. The Role of Monetary Policy

Moderate inflation acts as an invisible tax, quietly increasing government revenue. Excessive inflation, however, raises the cost of living for ordinary people. The government uses interest rate hikes and cuts to "walk a tightrope," striving to maintain economic stability.

4. Inflation and Cryptocurrency

Inflation is like the red shoes in the story, forcing us to dance endlessly as debt balloons. Cryptocurrency, on the other hand, is like a new pair of shoes that can free us from the constraints of traditional finance and protect our wealth from erosion. Its inflation-resistant nature and decentralized freedom make it an excellent choice for navigating economic challenges and achieving freedom.

5. Real-World Challenges and Future Outlook

The savings accumulated during the pandemic are now being eroded, with rising living costs and widening wealth gaps.

Cryptocurrency emerges as a refreshing breeze in the financial

world, helping us break free from the shackles of traditional finance.

6. Decision-Making

A new wave of the cryptocurrency super bull market is on the horizon, presenting the best opportunity for us to turn the tide and realize your dreams. Our carefully designed investment plan is your shortcut to entering the market and quickly accumulating wealth. Even if traditional banks put up obstacles against cryptocurrency, this is part of the financial revolution, and we must adapt flexibly!

The weekend is finally here—time to relax, recharge, and prepare for the challenges and opportunities that lie ahead before the rate cuts.

Today's message is to help you accurately seize the upcoming challenges and opportunities before the rate cut. Now, let's review your learning and investment results and see what we've achieved!

Just send me a private message, and within the next three days, we'll provide you with an extra trading signal to help you win even more in the upcoming market.

1. How much profit have you gained from your trades over the past two weeks? Are you satisfied with the results? What are your expectations for the performance of the "Wizard" and the "Shark" next week?
2. What do you think is the most worthwhile investment opportunity right now? How do you plan to seize the investment opportunities next week?
3. Since COVID-19, how has your life changed? What challenges do you currently face in life and investing?
4. Why is it said that owning cryptocurrency equals having true freedom?

Our two Chief Practical Instructor candidates are still giving it their all, and the global central bank meeting has opened new investment windows for us. Next week's investments will be even more exciting, and these two opportunities will be our new

FB Finance Institute - 15th Session

starting point towards success!

Let's unite, face the challenges, and seize these rare opportunities together to create something truly remarkable! Wishing everyone a relaxing weekend—take the time to unwind and prepare for next week's investments!
