Good morning, dear students and partners! As the highly anticipated NVIDIA earnings report approaches, the U.S. stock market is in a state of tense anticipation. The rate cut trade continues, with the dollar and U.S. bonds remaining weak, while oil prices and Bitcoin experience slight pullbacks.

The second stage of my showdown with Mr. B is reaching its final chapter! This week's winner will lead the Senior Strategic Partner

FB Finance Institute - 15th Session

and Principal Strategic Partner teams, with a greater chance of competing for the Chief Practical Instructor position next term.

Today, I will continue to lead our partners in live trading to seek out opportunities. Although our team's returns have already significantly outpaced the competition, we cannot afford to relax. I will maintain a serious, focused, and responsible approach to every trade, ensuring that all of you achieve steady growth in total asset returns. Today marks our thirteenth victory in the 20 win streak! Let's watch closely and continue to set new milestones!

Dear friends, the U.S. stock market is facing a severe test. Whether NVIDIA's earnings will exceed expectations or gain Wall Street's approval is not the primary focus of the market right now. What we should truly be focusing on is whether the Blackwell chip will continue to be delayed. NVIDIA's profits come from the massive spending by large scale enterprises, with all this capital expenditure flowing directly into NVIDIA's supply chain, which is also where profits are concentrated. This week, the market's

FB Finance Institute - 15th Session

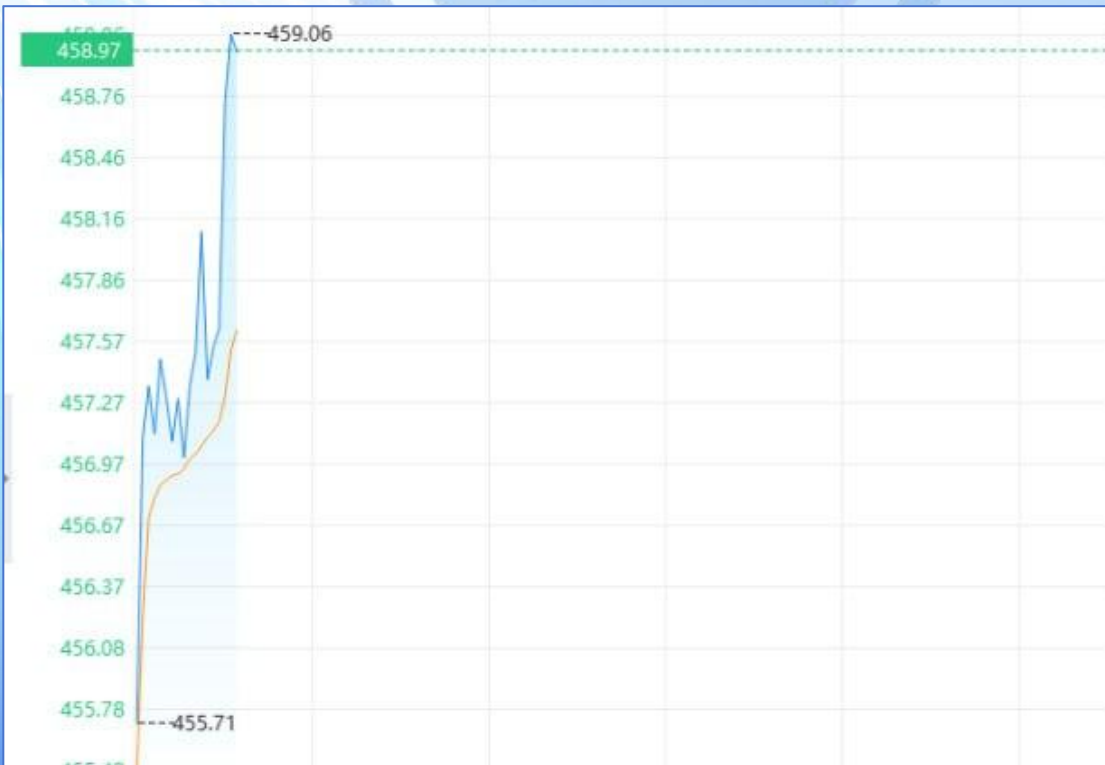

attention is squarely on NVIDIA.

In my personal analysis, NVIDIA's earnings report is bound to be impressive, and the guidance for the next quarter should be quite strong as well. The tech giants' investments in AI have largely benefited NVIDIA. Therefore, the market's expectations for NVIDIA are extremely high. In such a high expectation scenario, the market becomes tense, and any slight disappointment could lead to a risk averse strategy where all AI-related stocks are sold off, triggering market panic. So, the real factor influencing the market's movement now is whether NVIDIA can alleviate investor concerns about potential delays in Blackwell due to adjustments in chip design.

AI 4.0

FB Finance Institute

The U.S. stock indices are declining and gradually forming a strong bearish pattern—the M-top technical formation. At the same time, the famous defensive sectors in the U.S. stock market are showing a surge in intraday charts, indicating that a sense of panic is already creeping into the market. If a major shock were to occur now, there's no doubt that panic would explode, and the market could see another short-term bloodbath.

Therefore, I recommend that before the market experiences a steep drop, we quickly sell off all our stocks and exit to avoid unnecessary financial losses. When sharks start gathering near the beach, it's not the time to go surfing. The correct approach is to exit first and then wait for the right opportunity to return.

Some of you might be thinking, "If the U.S. stock market is eventually going to reach new historical highs, why not just hold on with diamond hands? Won't that work out in the end?" But is that really the case?

The U.S. stock market has always had a persistent issue: "Indices

rise, but stocks don't; you gain on the index but don't make money. When indices fall, stocks follow suit; you lose on the index and lose money as well." When the market is rising, your profits are very limited because it's nearly impossible to pick the best-performing stocks among so many. And when the market declines, most stocks fall, and if you hold too many, it's difficult to avoid the downturn.

It's like "missed the bite when it came to eating, but took every cut when the knife came down." In a choppy market, if you can't perfectly execute the strategy of buying low and selling high, holding on for months may yield almost no profit.

Friends, this isn't just a waste of our capital—it's also a waste of our precious time! Money that isn't working to grow is effectively depreciating. In today's world, incomes don't keep pace with the rising cost of living. So, for those of you holding onto long-term positions with a passive mindset, it's time to change this flawed thinking. If you're inclined towards risk-free trades, I now suggest shifting your focus to better ICO projects.

I see that many of you are still unfamiliar with ICO projects, so today I'll explain them in the simplest way possible.

First, Equality—Everyone Can Participate

- An ICO project is like a special investment event. Normally, only big companies or wealthy individuals can invest in new ventures, but with an ICO, anyone can use a small amount of money to support a project they believe in. This means that everyone has the chance to get involved, not just the super-rich.

Second, Quick Access to Funding

- Think of an ICO as hosting a big party online, where you invite people from all over the world to support your new idea. If a lot of people think your idea is cool, you can quickly raise enough money to bring it to life. Traditional methods might take a long time to gather funds, but with an ICO, the process is much faster. And most of the time, time is money—efficiency is everything.

Third, Global Supporters

- Through an ICO, your supporters can come from all around the

world, regardless of their country. Since all transactions are done over the internet, it doesn't matter if you're in the U.S., Japan, or Europe—you can easily get involved. This gives good projects the chance to gain more attention and support from a global audience.

Fourth, Open and Transparent

- In an ICO, all transactions and the flow of funds are recorded on a special ledger called the blockchain. This ledger is like a record book that can't be altered, and anyone can see what's written in it. This means everyone can verify that their money is being properly used in the right place.

Fifth, Share in Future Success

- If you participate in an ICO project, you stand to gain substantial returns if the project succeeds. It's like supporting an ice cream shop before it opens, and then, when it's up and running with booming business, you get a lot of ice cream. Through an ICO, you receive special "tokens," which can increase in value over time.

Summary:

An ICO is like an opportunity for everyone to come together and support a great idea. It gives anyone the chance to be part of a promising project, not just the wealthy elite. This method is fast, attracts global supporters, and allows everyone to share in the fruits of success. Its openness and transparency make it even more appealing than a stock market IPO!

In summary, the opportunity we now have with the BioChainX ICO project is clear, and its advantages are evident.

First, the project has a certain level of scarcity, which can easily lead to a buying frenzy, driving its value even higher upon listing. Second, the project's integration with real world applications is outstanding—tangible, visible, and highly practical.

Third, with the current high enthusiasm in the cryptocurrency market, high-quality ICO projects launched at this moment are more likely to achieve great success!

I've already made my assessment of this project—this is a

FB Finance Institute - 15th Session

guaranteed profit opportunity. Thanks to the transparent and open nature of ICOs, we can clearly see the project's actual progress. If it reaches 100% of its milestones, the project's value is bound to at least double. Selling at the opening would ensure a profit, with no chance of loss!

For a guaranteed profit project like this, how should we invest? With only 2 days left until the subscription period begins, we need to be fully prepared to ensure we don't miss any opportunities.

BioChainX Subscription Time: August 29, 2024, 00:00:00 ET

BioChainX Allocation Results Announcement: September 5, 2024, 12:00:00 ET.

As you can see, the subscription window is very short, which doesn't hinder the efficiency of capital use. In the face of a weak U.S. stock market and a guaranteed profit opportunity with this ICO, the question isn't about making a choice but about how to increase your allocation rate. The higher the allocation rate, the

FB Finance Institute - 15th Session

greater the guaranteed profit we can secure.

If you're still unclear on the details, please message me or the assistant, and I'll provide you with a customized subscription plan. Just like our 20 win streak, I have my exclusive strategies.

Today's live trading session has not yet revealed any exceptional opportunities. However, I will continue to maintain a diligent attitude and actively seek out trading signals. The moment I identify a promising opportunity, I will immediately share it with all of you.

Your profits are closely tied to my fate; only when you profit can I contribute more significantly to the AI 4.0 system's presale. As partners, our relationship has deepened—we are close allies and trusted comrades, inseparable in our mission. I hope our team continues to uphold this strong cohesion until we thoroughly defeat Mr. Shark!

This afternoon, Mr. Shark will make his appearance. Be sure to

FB Finance Institute - 15th Session

tune in on time to observe. I look forward to Mr. Shark rising to the challenge, pushing me even harder, and fueling my unwavering determination!

Closing Commentary (α & β Strategy)

Hey, traders and thrill seekers, good afternoon!

“Simplifying investments, enhancing the quality of life of countless families”—that’s our motto. I’m Richard Bill, carrying the torch of Prof. Clark’s legacy, fueled by the pioneering spirit of AI 4.0, and driven by an unstoppable determination to become the next Chief Practical Instructor. Your unwavering support means the world to me!

Let’s cut to the chase—today, I’m not just here to talk about the competition. I’m here to lay down a truth: BioChainX (BCX) is a project you absolutely cannot afford to miss. Why is BCX worth a shot? Check out these points:

~ If I had to choose between the current competition and BCX, I'd pick BCX without a second thought.

~ With the stock market in turmoil, BCX is your golden ticket to break free from the chaos.

~ A top tier ICO like BCX is like a rocket launch from zero to infinity—it's the next launchpad for the crypto bull market!

Get ready, folks. BCX isn't just another project; it's your best bet for smart investing. Make sure you're on board!

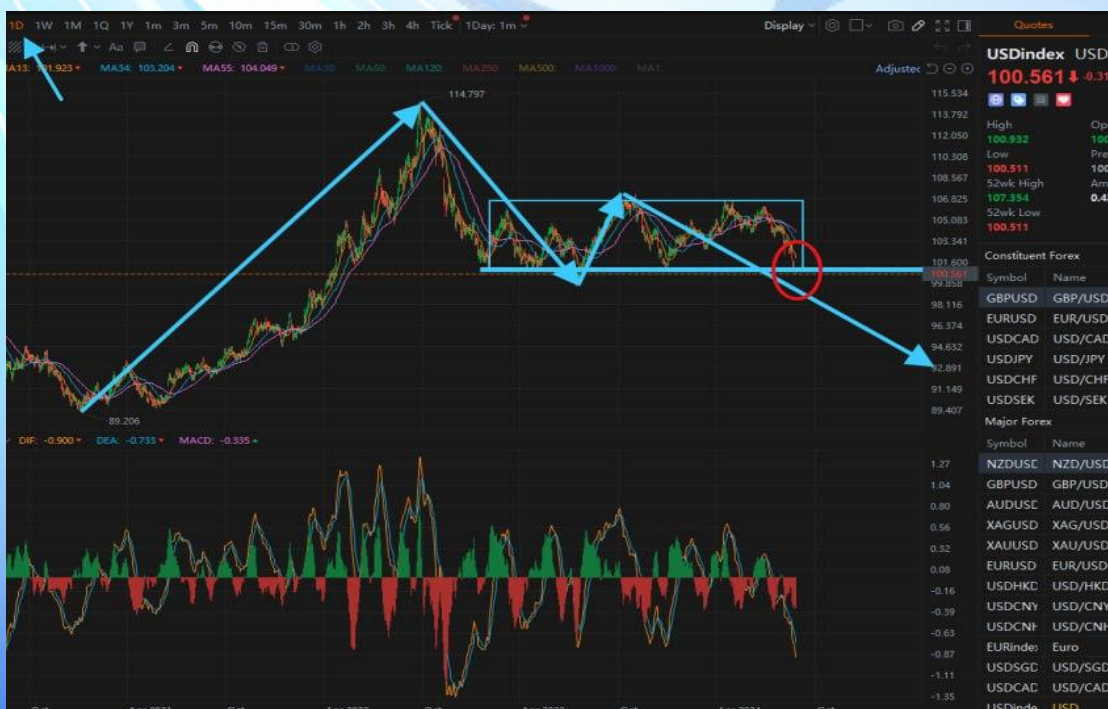

I remember when I first jumped into this discussion, I threw out a bold claim: if I could land the position of Chief Practical Instructor, I planned to help a select group achieve financial freedom within ten years. Some folks laughed, saying ten years is too long. I thought to myself, "Are you kidding me? that's some seriously short sighted thinking." Luckily, with the Strategic Partner Plan now in play, we can slash that timeline significantly.

Back then, I held my tongue, but now I'm going to lay it out straight: If your macro vision isn't razor sharp, you're never going

to see those fat stacks rolling in. Like it or not, that's the cold, hard truth—take it or leave it.

Last Thursday, I shared the hard truths about 'Rate Cuts ≠ Bull Market—Beware the Hidden Risks' and the 'Bitcoin Election Year Pattern,' and it hit home for a lot of you. But today? Today is a whole new level—how the dollar, indices, and top ICOs will dictate just how fast your wallet fattens up! So, buckle up. This isn't just another day at the office; it's a prime opportunity to grab what's yours. Don't wait until the cake is too big to want a slice!

A big shoutout to everyone who nailed that trade! We'll dive into contract trading and ICOs later, but right now, we need to focus on the dollar and the U.S. stock market. This is absolutely crucial for our mid term investment strategy.

Take a look at the daily chart for the dollar—it's breaking through a critical support line. With the Fed set to cut rates next month, this downturn is almost a sure thing. But what does a depreciating dollar mean for U.S. stocks? The impact is deep and complex, for example:

- ~ Many U.S. companies have debt denominated in foreign currencies. When the dollar loses value, these companies have to fork out more dollars to pay off the same foreign debt, piling on financial pressure.
- ~ A weaker dollar might push investors toward safe haven assets like gold or cryptocurrencies, potentially leading to an outflow of funds from the stock market.
- ~ A depreciating dollar could tighten market liquidity, disrupt capital markets, and worsen financing conditions, putting

additional pressure on stock performance.

~ Typically, a stronger dollar attracts foreign investors since they can buy more U.S. stocks with less of their local currency. But if the dollar weakens, they might pull their money out, reducing investments in U.S. stocks.

So, given all this, are you still worried about whether the indices will experience a false breakout or if they can keep climbing after the good news is priced in? If you're holding onto any lingering doubts, it's time to brace yourself, because the following insights will give you a clear picture of the serious challenges the dollar is facing. Put simply, the dollar's dominance in global currencies is under severe pressure:

~ European countries and the EU are strengthening their independence from U.S. foreign policy and reducing their reliance on the dollar.

~ There's a growing trend of non dollar transactions globally, like China and the UAE settling in yuan, Malaysia and India's trade deals, Russia and India signing non dollar oil trade agreements,

Brazil and China ditching the dollar, and Russia and China exchanging oil in their own currencies.

~ The Prime Minister of Malaysia has proposed establishing an Asian Monetary Fund to reduce dependence on the dollar.

~ The BRICS nations—Russia, China, India, Brazil, and South Africa—are gaining strength, deepening cooperation, and planning to issue a new currency while expanding their membership.

~ Saudi Arabia is open to moving away from the petrodollar model and has started selling oil in yuan.

~ A report from JPMorgan last August confirmed that the dollar's usage in global currency markets is declining.

~ IMF data shows that the dollar's share in global reserves has been falling for 20 consecutive years.

~ The rise of cryptocurrencies is also a significant factor, with 90% of central banks worldwide researching or discussing the issuance of digital currencies.

And that's not all, folks. Let's take a hard look at the geopolitical drama unfolding. The dollar isn't just in trouble economically; it's

taking heavy hits on the global political stage too. The U.S. is juggling multiple fronts right now:

- ~ Ukraine and Russia are locked in a fierce battle;
- ~ Tensions are high between Taiwan and China;
- ~ The Arab world and Palestinian resistance movements are clashing intensely;
- ~ The Middle East is seeing rising support lines shift and strengthen;
- ~ Iran is making continuous, bold moves.

It's like a global game of 'Whac A Mole'! Meanwhile, Africa is rising, shaking off the old colonial ties, and scrambling for resources. All of this directly impacts the dollar's standing, and its influence is dropping fast.

To sum it up: The dollar isn't just battling in the markets; it's rolling around in the geopolitical soap opera too. Brace yourselves, things are going to get wilder. Do you see the picture now? Do you agree?

Alright, folks, take a good look at these issues—they're playing out exactly as Prof. Clark outlined in his "Fed's Red Shoes" theory last Friday. As a seasoned bond investor, let me tell you, policymakers aren't just borrowing to cover expenses; they're trying to prop up the dollar's position. But here's the kicker:

Last December, President Biden signed a bill to raise the debt ceiling by \$2.5 trillion. It didn't take long for the Treasury to burn through that new limit and start borrowing under emergency provisions. If we don't raise the debt ceiling again, the Treasury might default—not only damaging our nation's credit but also directly threatening the dollar's credibility.

Now, if we do raise the debt ceiling, it could lead to economic weakness, skyrocketing public debt, shrinking incomes, decreased purchasing power, and rising poverty and unemployment. The Bipartisan Policy Center's research points out that if Congress mishandles the debt ceiling issue, the dollar's global standing could take a serious hit.

On the flip side, if the debt ceiling isn't raised enough, we might not be able to meet our financial obligations. This could lead to a catastrophic downgrade in our credit rating, causing investors to dump U.S. assets and flee to safer currencies. The result? Widespread unemployment and soaring borrowing costs.

So, folks, the debt issue really is that ticking time bomb just waiting to go off! When it does, the economic and market turmoil that follows is going to hit like a freight train. The dollar isn't just stuck in a debt trap; it's playing global "Whac A Mole" as more and more countries ditch it in favor of other currencies. The dollar is starting to look more and more like a relic of the past.

Now, do you see it? The dollar isn't the almighty powerhouse it once was. Its devaluation is going to pick up speed, bringing economic strain, reduced investments, tighter market liquidity, and weaker stock market performance along with it.

These mid to long term trends will directly impact your investment strategy. Are you still going to stress over short term

stock market swings? When you compare, isn't it crystal clear where the opportunities lie in the crypto market?

Even more so with the flood of top-tier ICO projects coming our way—this isn't small potatoes. For 90% of people, these powerhouse ICOs are a way safer bet than the rollercoaster ride of contract trading. Sure, we might lose some short term competitive edge, but in the end, it's the secure, steady profits that truly win the game!

"If I had to choose between the current competition and BCX right now, I'd pick BCX in a heartbeat!" That's the core point I want to hammer home today.

Sure, running for Chief Practical Instructor is a big deal for me—the rewards and future prospects are a "delicious cake"—but why am I saying this today? Let me lay it out for you—they might just flip your thinking upside down!

First Point: Why Are ICOs the Heart of Every Crypto Bull Market?

Imagine ICOs as a massive crypto “super sale.” They provide a platform for emerging crypto projects to directly raise funds, often bringing cool new tech and disruptive solutions into the mix. Investors see this like a giant, mouthwatering cake, and everyone’s scrambling to get a slice!

With an ICO, you’re getting in on the ground floor, scooping up tokens at rock bottom prices before the project even hits the market. And when that project takes off? Those token prices don’t just rise—they explode, skyrocketing to heights that can make your head spin.

Every successful ICO is like lighting a match in a room full of fireworks—it ignites the entire market’s enthusiasm. People rush to invest, and suddenly, the crypto bull market roars to life, creating waves of excitement.

Successful ICOs aren’t just about raising funds; they help the

FB Finance Institute - 15th Session

entire crypto ecosystem “grow up.” New projects bring new technologies, new applications, and potentially collaborations with other projects, making the market even more vibrant and dynamic.

So, think of ICOs as the “engine” driving the crypto bull market, keeping the momentum going full speed ahead!

Second Point: How the Explosive Performance of ICOs in Past Crypto Bull Markets Makes the Phrase ‘From 0 to $+\infty$ ’ Easy to Understand!

1. BTC

Background: Bitcoin is the “founding father” of cryptocurrency, its success was the opening act that set the entire crypto market on fire.

Contribution: Bitcoin’s success was the “prelude” for other ICO projects to rise, filling everyone with endless curiosity and anticipation for what crypto could become.

2. ETH

Launch Date: July 2014

Launch Price: \$0.30/ETH

All-Time High: \$4,878.26 (November 2021)

Growth: Over 1,600,000%—yes, you heard that right,
1,600,000%!

Application: Blockchain platform for smart contracts and
decentralized applications (dApps)

3. BNB

Launch Date: July 2017

Launch Price: \$0.10/BNB

All-Time High: \$690.93 (May 2021)

Growth: Over 690,000%—mind blowing returns!

Application: Exchange token used for fee discounts and other
functions on Binance

4. ADA

Launch Date: September 2017

Launch Price: \$0.02/ADA

All-Time High: \$3.10 (September 2021)

Growth: Over 15,000%—a rise so magical it makes you wonder if it's real!

Application: Blockchain platform for smart contracts and decentralized applications (dApps)

5. DOT

Launch Date: July 2020

Launch Price: \$0.30/DOT

All-Time High: \$55.08 (November 2021)

Growth: Over 18,000%—staggering growth!

Application: Blockchain interoperability platform for connecting different blockchain networks

6. LINK

Launch Date: September 2017

Launch Price: \$0.11/LINK

All-Time High: \$52.88 (May 2021)

Growth: Over 48,000%—talk about sky high returns!

Application: Decentralized oracle network connecting smart

contracts with external data sources

7. XLM

Launch Date: August 2014

Launch Price: \$0.0035/XLM

All-Time High: \$0.8756 (January 2018)

Growth: Over 24,000%—a rise that feels like hitting the jackpot!

Application: Cross border payment platform facilitating global financial system interoperability

8. TRX

Launch Date: September 2017

Launch Price: \$0.0019/TRX

All-Time High: \$0.3004 (January 2018)

Growth: Over 15,000%—a surge that screams “miracle!”

Application: Decentralized entertainment content platform for global content creation and sharing

9. EOS

Launch Date: June 2017

Launch Price: \$0.90/EOS

All-Time High: \$15.68 (May 2018)

Growth: Over 1,600%—a rise that's both shocking and worth cheering for!

Application: High performance blockchain platform supporting large scale decentralized applications and smart contracts

Third Point: BCX—The Ultimate Solution for Building Your Wealth Matrix!

Folks, listen up. The ICO projects I just listed are the rock stars of the crypto world. Each one ignited investor passion and took the market by storm. From the initial zero to the infinite gains, these star projects have proven that ICOs aren't just amazing investment opportunities—they're the magicians of wealth creation!

Now, let's talk about BCX—this is your ultimate secret weapon in the wealth matrix!

~ Explosive Returns: Compared to spot trading (BTC and institute tokens) and 90 day high yield financial products, BCX's returns are going to shoot up like a rocket. I predict it could be listed as early as next week, and you're looking at returns of at least several times your investment—this is the real investment surge! Spot trading? That's child's play. BCX is the true superstar you should be focusing on!

~ Disruptive Zero Risk: Compared to contract trading, BCX is practically the symbol of zero risk! When online subscriptions begin, I predict the Issuance Quantity will hit 100% in no time—signaling zero risk. Multiply that number by the issue price (\$4), and you're looking at something close to the listing opening price. This means you have the chance to earn astronomical returns with virtually no risk. So, BCX is the absolute ace in your investment portfolio!

Fourth Point: Go All In—Secure the Green Channel!

Listen up, folks, we're about to step onto the big stage, and there's no time to twiddle your thumbs. Your mission is clear: go all in and grab that golden ticket!

~ Critical Moment, Don't Miss It: Warriors around the globe, mark your calendars—this Thursday at midnight (08/29/2024, 12AM ET) sharp, the online subscription kicks off. This is your golden hour, don't blink!

~ Ridiculously Low Entry: It's practically a giveaway—just \$1,000 (4*250) gets you in. Missing out on this deal would be a crime!

~ Super Short Cycle, Done in a Week: Get in, grab your share, and lock it down. Allocation is guaranteed, but the earlier you jump in, the more you put in, the more you get out. Want a bigger slice? DM us directly—no fluff. Allocation data drops next Thursday at noon, and any funds not allocated get returned, no worries at all.

~ Go Big or Go Home: Here's an inside tip—if our team's fund contribution is strong enough, you've got a shot at 100% allocation. That's right, whatever you put in, you get back in full. This is your rocket to the top—prepare for launch!

~ All In, Full Position: To our supporters, this is the final battle. Go all in, max out your position, and don't look back. You won't find a better deal than “zero risk, high return, short cycle” anywhere else! This is the path we're taking—no hesitation, no regrets!

AI 4.0 Strategic Partner Investment Plan (Shark)

Strategic Partner Group Name	Associate Strategic Partner		Intermediate Strategic Partner		Senior Strategic Partner		Principal Strategic Partner

Folks, why didn't I share today's trade? Simple—because after two weeks of grinding, we've pulled in returns ranging from 125% to 314%. Not bad, right? But here's the kicker: if we secure that green channel in BCX's online subscription, our returns could multiply within a week. Now you see why I'm telling you to go all out?

And when I said it wouldn't matter if I lost this competition, now you get the real meaning behind those words, don't you? Missing an opportunity like this is far worse than losing a single battle.

Now, let's dive into today's interactive Q&A to make sure you've got this down:

~ Do you understand the challenges the dollar is facing and their mid term impact on the stock market?

~ Why are top tier ICO projects the core investment in the crypto market?

~ What makes BCX stand out compared to spot trading, contract trading, and high yield fixed financial products?

~ How do we secure 100% allocation? If BCX's subscription reaches 500% and we get the green channel, how much pure profit would you make if you invested \$100,000?

That's it for today's session. If you found my insights helpful, don't forget to cast your vote for me. Get ready for tomorrow—at the end of the day, we're diving into BCX's online subscription! Let's go all in and make it count!
