

## Morning Review

Good morning, dear students and partners! This is James Wilson, and today I'm here to bring you the latest pre-market analysis.

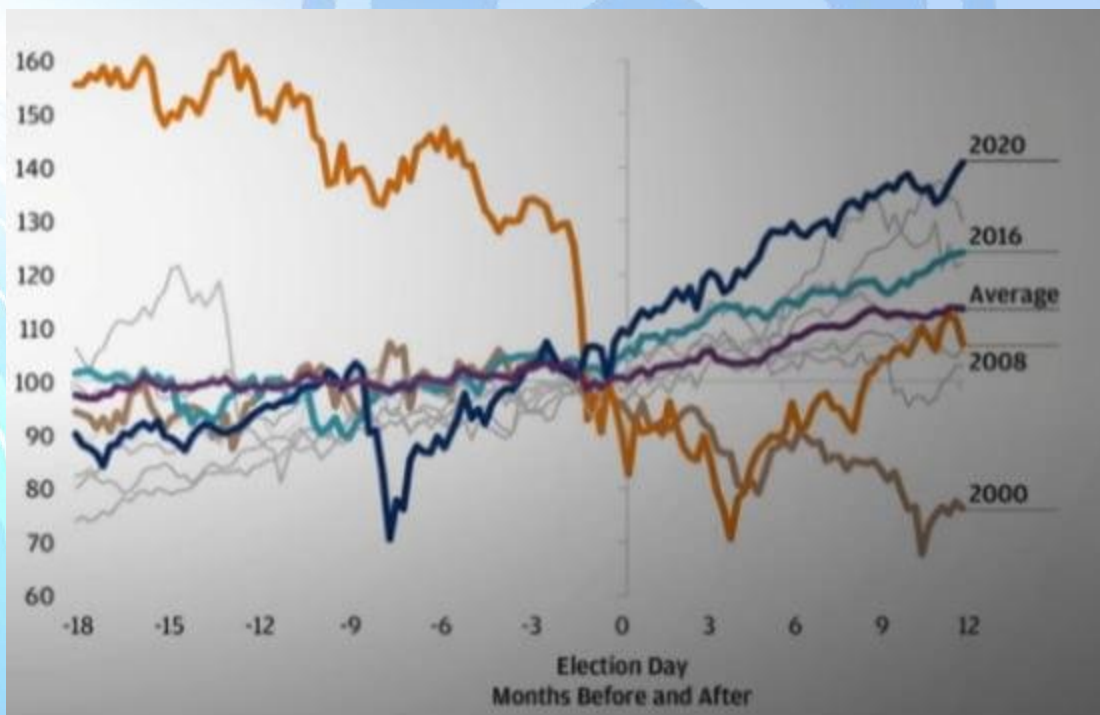

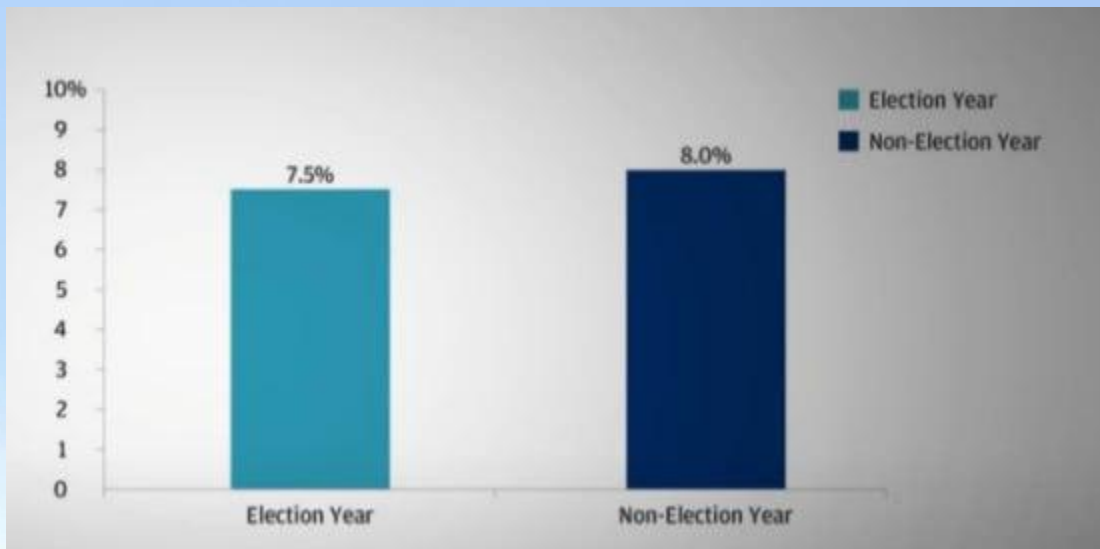

First, tomorrow the highly anticipated CPI data will be released. Although everyone believes that no matter the outcome, it won't change the fact that a rate cut on September 18th is expected, we still need to keep a close watch. After all, CPI data has always been considered the key obstacle for the Federal Reserve in initiating monetary easing policies.

In addition, there's another major news today: Harris and Trump will have their first televised debate, which may also be their only direct confrontation before the election. The uncertainty of an election year fills the market with suspense, and the outcome of this debate could bring new trends to the market.

Many people believe that in election years, the market tends to offer more opportunities. But is this really the case?

FB Finance Institute

In an election year, the policy directions of both parties often dominate the movement of the U.S. stock market in the months leading up to the vote. Major institutions have already begun

**FB Finance Institute - 15th Session**

positioning themselves, conducting in-depth research. And what about retail investors? They typically realize the need to adjust their strategies only when election hype reaches its peak. So, taking advantage of today's debate, I want to give you a concise explanation.

Historically, what are the key characteristics of the stock market's performance during an election year? According to a reputable report by Goldman Sachs, since World War II, the returns of the U.S. stock market during election years and non election years have shown little difference. The data reveals that the average return in an election year is +7.5%, while in non election years it's +8%. Numerous other sources confirm this—there's practically no difference in returns!

However, while returns may appear similar, the risk is not. As shown clearly in Figure 2, volatility in the market significantly spikes before and after elections, with the stock market becoming increasingly unstable. This is why risk management becomes especially crucial during an election year.

## **Here are the four potential outcomes of this year's election:**

1. Trump and the Republican Party sweep.
2. Trump wins, but the Democrats control at least one chamber of Congress.
3. Harris and the Democratic Party sweep.
4. Harris wins, but the Republicans control at least one chamber of Congress.

**From a data analysis perspective, scenario 1 would have the greatest impact on global investment markets. If Trump and the Republicans sweep, all of Trump's policies could potentially be fully implemented. Let's focus on the key aspects of Trump's policies:**

### **1. Tariffs:**

Tariffs are a central issue in this election, with Trump taking a very aggressive stance. Imposing tariffs would trigger inflation. Historically, while the government profits from tariffs and domestic companies might benefit, it's the average consumer

who pays the price. Tariffs would lead to a stronger U.S. dollar, increased inflation expectations, and heightened market risk due to trade wars, driving safe-haven capital back into the U.S. market. Tariffs are generally negative for agriculture but positive for Bitcoin. During previous trade wars, Bitcoin performed exceptionally well.

## **2. Corporate Taxes:**

Trump's approach involves imposing taxes externally while reducing taxes domestically. He has promised to cut personal income taxes, which would reduce federal revenue, negatively impacting the bond market. However, it would likely boost U.S. equities by around 5% and provide Bitcoin with roughly a 10% upside potential.

## **3. Cryptocurrency**

Trump has made it clear that he intends to establish a "strategic reserve" for Bitcoin and immediately fire the current SEC Chair, Gary Gensler. Gensler has been known for his tough stance on the cryptocurrency sector. His dismissal would signal a significant shift,

showing that Trump aims to clear regulatory obstacles and position the U.S. as a global leader in cryptocurrency.

This move sends a powerful signal: if Trump returns to the White House, the cryptocurrency sector could experience an unprecedented bull market. The U.S. would likely seize the lead in the global cryptocurrency market, establishing itself as the undisputed "king of crypto."

As for immigration policy, we'll touch on it briefly. While a relaxed immigration policy could provide some economic stimulation, even if tightened, the overall impact on economic growth would be relatively minor. Therefore, for investors, immigration policy changes are not a critical focal point.

From the above analysis, we can clearly conclude: Trump's re-election would open unprecedented doors to wealth for the cryptocurrency industry!

At this moment, we are firmly holding the most valuable

**FB Finance Institute - 15th Session**

investment opportunity in the market—QBL’s subscription progress has surpassed 340%!

This is an unprecedented surge, fully reflecting the market’s strong confidence and support for QBL’s future potential. It’s important to note that quantum technology projects themselves are rare and valuable resources. Compared to BCX, QBL will have a much broader range of applications in the market. This means that not only does it have a stronger technical foundation, but its future performance will undoubtedly surpass BCX!

Let’s take another quantum technology project as a reference—QNT. While the QNT project focuses on the single field of quantum computing, its market performance has already been remarkable. According to the whitepaper, QBL’s application scenarios are much broader, covering multiple dimensions of quantum technology, which gives it stronger scalability and growth potential in the future. So, is QBL more advantageous and comprehensive than QNT? The answer is clear!

**Now, would you like to know the increase in QNT's value since its launch?**

The answer is 28,300%—an astounding 283fold increase!

What does this signify? The QBL project is certain to trigger a massive storm in the cryptocurrency world. The market's anticipation for quantum technology has never waned, and QBL is positioned right at the center of this storm! Now, looking at QBL's 340% progress bar, do you still think that's a lot? This is just the beginning! The future potential is far beyond your imagination.

However, we shouldn't solely chase long-term ideal prices—we must also focus on the tangible returns in the short term. Let's concentrate on QBL's immediate gains, especially since our plan is to complete this round of trading within two weeks. Based on the market's enthusiasm and the project's inherent potential, I can confidently say: QBL will bring at least 10x returns! And this comes with no risk!

This is why I keep emphasizing—QBL is an investment opportunity that can truly change your destiny. You absolutely cannot afford to miss this!

Some may think that talking about money and opportunity every day seems shallow. But friends, if you've ever experienced the situations of those desperately in need of money, you would deeply understand that earning enough money means survival, security, and dignity.

When your family faces a severe illness or you are in a life or death crisis, urgently needing money to save a life, would you still think discussing money is shallow? In such moments, the lack of money is not just a difficulty—it's helplessness and despair. In fact, many people in society are forced to make painful decisions, sometimes even taking extreme risks, simply because they lack money. When that moment comes, you will be grateful for every wise decision you've made because those choices provide you with the financial security you need today.

Earning money may seem like pursuing something ordinary, but its meaning goes far beyond the surface. When used wisely, money can become one of the most beautiful forces in the world. It can not only provide us with security and options but also give us the ability to help those truly in need. We can donate to children living in poverty, providing them with warmth in winter, hope, and a future.

Money is not just a tool for living—it can be a force that changes the world and brings hope. Choosing to earn wealth is not just about better controlling our lives, but about having the ability to help others. This is why I continuously emphasize: the purpose of investing is to make money!

So the question arises: How do we ensure we make the most money from the QBL project? How do we maximize the appreciation of our assets?

The answer is simple: the green channel! Once QBL's subscription progress surpasses 100%, it means there is no risk of losing the

funds allocated. The only thing we need to focus on now is how to secure a higher allocation percentage. In a zero-risk environment, the only objective is to earn as much as possible, ensuring we don't waste this once in a lifetime opportunity.

At this moment, the only right move is: increase your investment! Stop wasting time and energy on U.S. stocks, crypto contracts, or options. The QBL project doesn't require much of your time—just a mere two weeks. 14 days—this fleeting moment only takes up 0.037% of your life, like a single grain of sand on the beach.

Professor Clark, Mr. B, and I have already gone all-in and are continuing to increase our investments. Our goal now is to help everyone secure the green channel, ensuring that each of you reaps the greatest possible reward from this upcoming storm.

The allocation ratio is like cutting a cake—the size of the cake is fixed, but the key is whether you choose to pick up the knife and cut first or wait until others have eaten, leaving you with just a small piece. Right now, by increasing our investment, we are

seizing control of the knife! We have the advantage of time, strategic partnerships, and every favorable condition on our side. Each additional investment amplifies our time advantage, allowing us to secure a larger share and maintain control over everything!

Once Professor Clark secures the green channel, we will achieve a 100% allocation rate, meaning we'll be the undisputed winners! Analyzing the situation, increasing investment right now is the smartest move—there's no risk, the cycle is short, and the earlier we act, the larger our share will be. In the end, we will control the green channel and achieve true victory.

This is precisely why I'm going all-in and continuing to add to my investment. I'm not satisfied with my current share—I want more. I know that only those who take action will win the future!

I've seen an incredible movie called "The Pursuit of Happyness," and two scenes left a profound impact on me, lingering in my thoughts long after watching, filled with heartache that almost

brings tears.

The first scene is when Chris and his son, homeless, are forced to spend the night in a subway station bathroom. The bathroom is cold and cramped, yet Chris, trying to comfort his young son, suppresses his despair, pretending that everything is normal. He holds his son close, using his body to block the door, as if that tiny bathroom was their only sanctuary. When a knock suddenly comes from outside, Chris's eyes well up with tears—the overwhelming pressure of his situation almost breaks him. But he doesn't crumble. His tears flow silently, revealing the quiet strength and fragility within him. This scene shows the greatness and helplessness of a father, as the cold reality cuts deeply into the hearts of everyone watching.

The second scene is when Chris finally secures a full time job. Standing in the office, waiting for the employer's decision, his face is filled with barely-contained tension and anticipation. When he finally hears that he's been hired, disbelief and joy flood his eyes. He walks out of the office, trying to maintain his

composure, but tears burst from his eyes uncontrollably. It's a subdued victory, the joy and relief hidden amidst the crowd, deeply moving, as every step Chris takes seems to carry the weight of countless struggles and hardships.

Movies are art, often blessed with happy endings that convey strength and hope. Yet real life is far more brutal. It's precisely because of this that when we face a once in a lifetime opportunity like QBL, we must not let it slip by. Although I have already achieved financial freedom, I dare not relax for even a moment. I know that only by constantly pushing forward can I secure more of the beauty and security that life has to offer. Earning money is not about greed—it's about securing the future. Material poverty can destroy a person's dignity, and spiritual poverty can exhaust the soul. But without material support, how can one nurture the soul's fullness?

With the QBL project, let's give our all and sprint toward the green channel, leaving no room for regret! This afternoon, Mr. B will take the stage—let's look forward to the good news he'll

**FB Finance Institute - 15th Session**

bring us!

---

## Closing Commentary

Hey, what's up, my fellow market warriors and freedom chasers? Hope you're all pumped this afternoon!

"Simplifying investments, upgrading the quality of life for countless families"—that's not just our slogan; it's the mission that drives us to break barriers. I'm Richard Bill, powered by the legendary spirit of Professor Clark, and I'm charging full speed into the cutting edge of AI 4.0. The next top practical mentor? That's me, baby. And guess what? Your solid support is the rocket fuel that keeps me going strong!

Last week, we witnessed BCX shot up like a rocket, and I know the feeling of watching your account balance explode was an absolute rush. But don't relax just yet—this is only the warm up! Yesterday, my mentor, Prof. Clark, used wave theory in a live

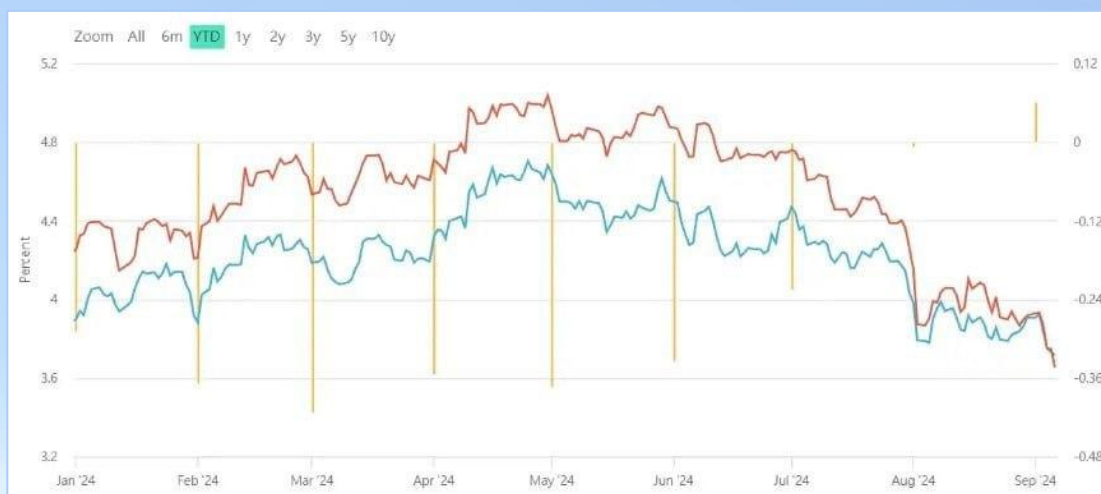

**FB Finance Institute - 15th Session**

analysis of the stock market and confirmed we're at the beginning of the C-wave downtrend. And as for those elite IDO projects, you want that green VIP channel? This isn't about luck—it's all about skill! We've got the advantage, and while there are some challenges, let's be real—when haven't we faced obstacles head on and come out stronger? You're grinding, I'm grinding, and together, we're unstoppable.

And today? We're stepping things up a notch. I'm going to drop some hardcore investment secrets on you! We'll break down those so called "complex" economic indicators, breaking them down so clearly, even your dog could follow along. Plus, I'll walk you through exactly how to dominate QBL's IDO, lock in the best allocations, and maximize your wealth! Vote for me, buckle up, and let's dive headfirst into this new era of investment opportunities—together!

For those who know me well, you're aware I got my start out as an old hand in the bond market. Then, like so many others, I got sucked into the madness of the crypto world. From spot to futures, I navigated it all and thrived, ultimately achieving financial freedom—heck, I even bought a vineyard in Europe! But we're not here to swap stories over wine today (though I've got plenty of stories to share about that). Instead, Instead, let's shift gears and dive into stocks, specifically looking at the current investment landscape through the lens of government bond yields.

Take a look at the chart: the red line represents our country's 2 year bond yield, while the blue line shows the 10 year bond yield.

**FB Finance Institute - 15th Session**

The conclusion is simple: under normal circumstances, the yield on the 10 year bond is typically higher than 2 year. Why? Because long term bonds come with more risks—things like inflation, interest rate fluctuations, and economic instability. Investors naturally demand higher returns to offset these uncertainties.

Looking at the bond yield inversion—where short term yields are higher than long term yields—this is the market’s loudest signal for an upcoming recession. What happens when this inversion hits? The Fed typically cuts interest rates to stimulate the economy. Sounds like a good thing, yeah? Wrong! This maneuver puts pressure on the dollar, leading to devaluation. Meanwhile,

**FB Finance Institute - 15th Session**

recession fears start chipping away at corporate profits, and the stock market gets hit hard.

So, what do investors do? They flee high risk assets like stocks and move into safer havens like bonds, gold, or even cryptocurrencies. This mass exit of capital could accelerate the dip in the stock market even more.

Since the 1980s, every one of the five recessions we've seen was foreshadowed by a bond yield inversion. So, the big question is: will history repeat itself? And could the AI boom be the next bubble to burst?

This is why the market has been so jittery lately. Look at the AI leader, \$NVDA, pulling back hard. Volume is dropping off a cliff—it's a neon sign for capital outflow. And even more telling, the MA13/34/55 moving averages are all bending downward—something that only happens in a bear market! Even if there's a chance for a future bounce, we're looking at months before we see any real recovery.

So, why take the risk? Smart investors know better than to stand under a collapsing wall. If leaders like NVDA are trapped in a bear market, do you really think the broader market stands a chance? Let's be real: smart money has already pulled out. In situations like this, pulling out is the only risk free move. The real question is—have you pulled out yet?

 A screenshot of a mobile application interface titled "Initial Offer". At the top, there are two tabs: "Subscribe" (selected) and "Allocation". Below the tabs are three sub-sections: "In Subscribe", "My Subscriptions", and "My Winnings". The main content area displays details for a "QBL" token offering. It includes a "Subscribe" button, a progress bar showing "432202777.3851 / 120000000.00" with a "360.188981%" label, and a list of subscription parameters. A blue arrow points to the progress bar. At the bottom, it says "No more".

Subscription Price	3.8000 USDT
Subscription Lower Limit (Tokens)	1000.00
Subscription Upper Limit (Tokens)	10000000.00

**Speaking of risk free opportunities, let's cut to the chase, folks. No doubt, all eyes should be laser focused on QBL right now—this is the hottest investment on the market, and the numbers don't lie. Just take a look: the online subscription progress has already blasted past 360%, and that says everything you need to know:**

~ Risk? Nonexistent! Once the progress bar surpasses 100%, it means the project has secured its funding—there's zero risk. This is a rock solid opportunity.

~ Opening price multiplier: Based on the current data, QBL's opening price is projected to surpass \$13.68 ( $3.8 * 3.6 = 13.68$ ). It's not rocket science just basic math.

~ Profit expectations: Today marks only the second day of QBL's IDO subscription phase, and there are still 10 days left. At this rate, it's highly likely that the progress bar could break 1000%, maybe even 1500%. The sheer demand here screams massive profit potential.

To summarize: Getting involved now not only eliminates risk but also gives you the upper hand in securing a higher allocation. The investment cycle is short—just about 10 days—and once QBL hits the market, the returns could easily be 10x! If you're not making moves now, then when? For those still on the fence, this is the key moment to grab hold of this advantage!

Folks, what I've been laying out so far? That's just entry level understanding. Today, we're stepping it up a notch—we're getting a bigger, sharper view on why QBL is packing such insane investment potential. It's time to pull out the big picture thinking!

**First off, let's break down the entry barriers of both BCX and QBL, and the impact they're having on the market:**

~ BCX entry threshold? \$1,000.

~ QBL entry threshold? \$3,800.

What does this tell us? Simple: higher entry barriers attract higher quality investors. And when you've got these premium players involved, what you see is long term, steady growth—not the

choppy, up and down moves you get with retail traders.

Take \$NVDA as an example—its long term bull run is thanks to top tier institutional investors pouring in with a long game strategy.

What about retail traders? They're just surfing the waves, getting tossed around while the big players make their real moves.

**Exactly, it's this shift in capital and attention that's triggered BCX's pullback. And there are two main reasons behind it:**

~ The quick cash out during the IDO phase—everyone's locking in those short term profits.

~ The quantum technology allure of QBL—it's simply outshining biotech right now. The market's focus (and money) is rapidly moving toward QBL.

So, when you piece this together, is QBL's post listing value likely to far exceed BCX's? The answer is obvious: absolutely. While BCX had its initial spike and is now in a consolidation phase (and sure, it'll pump again, that's just a matter of time), but QBL? The profit potential on its listing day, especially that first day, is going to

blow the roof off. With what we're seeing from the IDO phase already, QBL's explosive power post listing is going to be even more thrilling, right folks?

Now is the time to act—QBL's about to ignite the market, and you need to make sure you're riding that wave. Opportunities like this don't come around often. Nail this one, and your future's locked in!

So, folks, the QBL IDO is standing right in front of us like a treasure chest just waiting to be opened in your backyard! Opportunities like this don't knock every day. Why is it so crucial? Simple: scarcity equals value. The rarer something is, the more valuable it becomes. That's the most basic principle of economics.

Let's break it down. QBL didn't just randomly choose this exchange for their IDO. It's like those VIP clubs where only the elite get access. Just like in the stock market, the IDO project team selects exchanges that match their prestige.

It's like LeBron James joining the Lakers—he didn't just boost the

team's strength, he instantly turned Lakers fans into VIPs overnight. And now, we're on the verge of the same wealth doorway.

But wait, it gets better! Typically, top tier IDOs sign contracts with exchanges for 6 months to 2 years. If the market keeps heating up during that time, QBL could get listed on even more exchanges, pushing its influence to new heights. Imagine LeBron James playing for multiple NBA teams at once—his market value would skyrocket! QBL is poised for the same kind of explosive growth.

How do tokens launch from zero all the way to the moon? Look at ETH, BNB, and IOTA. They all started as small, unassuming tokens and then multiplied thousands upon thousands of times. QBL is now heading down that very same path.

Scarcity grants QBL immeasurable value. The QBL IDO isn't just another investment; it's a once in a lifetime opportunity that could go down in history! The doors are open now, but they won't stay open forever. Time is limited—what are you waiting for?

**FB Finance Institute - 15th Session**

**Here's the key, folks: the “compass” of the IDO, pointing you to maximize your allocation percentage—that magic number determining how big your slice of the “pie” will be. It's not as simple as just throwing in money; timing and strategy matter. Let's break down seven crucial techniques learned from the BCX IDO:**

Technique 1: Timing is everything. The earlier you invest, the larger your slice of the “pie.” Don't settle for crumbs—claim your big piece!

Technique 2: Give it your all, shoot for the moon. The more you invest in one go, the bigger your return. It's as simple as that—the more you throw in, the more you reap.

Technique 3: All in for the win. The total amount of capital you're willing to commit directly impacts your share. The fatter your account, the bigger your slice of “pie.”

Technique 4: Play the popularity game. When the hype is high and

funds flood in, big players get bigger shares. In other words, the bolder you are, the more you'll get.

Technique 5: Stay active, seize the moment. Active accounts get the most rewards. The more you trade, the bigger your allocation.

Technique 6: Combo strikes for total victory.

Every pro knows that if you can't KO your opponent with one punch, a combo is your knockout move. Each strike must land perfectly. Here's the simple logic: IDO investing, like IPOs, follows two core principles: first come, first served and capital priority. So, how do you masterfully execute the combo? Let me give you a few examples:

~ Timing + Capital = The Ultimate Power Move. First, lock in the timing advantage, then gradually increase your capital. You've now secured the two key factors—time and capital. Your allocation percentage naturally skyrockets.

~ Start small, then go big. Maybe your initial investment is

modest, but you grab the early bird advantage. Then, when you follow up with a larger second investment, the exchange will immediately tag you as a “premium investor,” essentially turning you into a VIP.

~ Active hours are golden hours. The most active trading happens around major market openings and closings. Invest during these peak times, and you’ll see the biggest returns.

~ Stay active, grab the bigger slice. Accounts that participate daily get a higher allocation. Just like with IPOs, active accounts always get prioritized.

Of course, if you still have questions about these techniques, feel free to DM me anytime!

Technique 7: The ultimate move—securing the green VIP channel equals 100% allocation.

Let’s be real—compared to sheer power, all other efforts are just

**FB Finance Institute - 15th Session**

child's play. The green VIP channel is your knockout punch, your one hit KO to all opponents! How do you achieve this level of absolute strength? Simple: master the six techniques above, then add this final move to seal the deal.

Honestly, when you see others get 100% allocation and you're left on the sidelines, doesn't it sting a bit?

My mentor, Prof. Clark, laid it out clearly already: as early investors, combined with our contribution to the BCX token IDO, the strength of our fund pool, and our strategic partnership with the exchange, not to mention the sheer number of us—securing that green VIP channel is practically a done deal for us!

But folks, we can't afford to be complacent. Everyone's vying for this slice of the pie, so we have to give it our all.

Prof. is working tirelessly to ensure we seize this advantage. And as for me? I've already gone all in, even mortgaging my vineyard in Europe to raise more funds.

I know many of you, like me, are tight on cash. But honestly, this

is just a risk free no brainer profit opportunity, right?

**Let's be clear about what we're dealing with here:**

~ This is a no risk, high reward opportunity. Even if we don't secure the green VIP channel, we won't lose anything. On the contrary, as we keep increasing our investment, the ultimate gains (higher allocation) will still be ours.

~ The chance of missing out on the green VIP channel is extremely low. I trust Prof. Clark, and I trust the strength of our team. Our contribution, influence, and numbers are undeniable. Not everything in this world can be bought with money; our value and influence are the real keys — and that's the essence of business: value exchange. Y'all agree, right?

That's why I'm willing to mortgage my prized assets. How many times in life do we get opportunities like this?

**Alright folks, that's a wrap for today's session. While others are still focused on the presidential candidates' speeches, we've been hustling to figure out how to make our wallets skyrocket! Today's moves will determine how we reach new heights of wealth. Let's quickly sum it up:**

~ Scarcity drives value: QBL's IDO is a rare, no risk, high reward, short cycle investment opportunity. It's this scarcity that gives it such immense value.

~ The stock market's fate is sealed: With the yield curve inversion confirming an economic downturn, selling off assets and diving into QBL's IDO is the smartest move you can make!

~ Master the strategy: Learn the 7 key techniques — timing, capital, staying active — to maximize your allocation. The green VIP channel is your ultimate weapon, securing 100% allocation, but it demands full commitment.

~ Team strength: Our collective power — numbers, influence, and

**FB Finance Institute - 15th Session**

contributions — will win us the green VIP channel. It's not just about money, but winning through value exchange!

Only those who go all in truly deserve that “Super Green VIP Channel” spot! The door to opportunity is open, but it won't stay that way forever. Don't hesitate — seize the moment, invest smart, and make sure you're at the front when the profits roll in.

Let's push forward together! Tomorrow, we'll unravel the “Mysteries of IDO Allocation Ratio.” Stay tuned, see you tomorrow!

---

AI 4.0
