

Morning Review

Good morning, dear students and partners! I'm James Wilson, and today I'm here to bring you the latest morning briefing to help you outline the key investment points for this week.

First, I want to highlight that the Green Channel has officially opened. Successfully obtaining the "Green Pass" means that you will enjoy a 100% allocation rate in the QBL project. As the QBL project progress bar advances, your rate of return will increase proportionally. Today is Tuesday, and there is still plenty of time to make a second leap in progress! Make sure to seize the opportunity, as our total available Green Channel share is only \$100 million. It's on a first-come, first-served basis, so reserve your share based on your target and needs.

Additionally, the retail report for August has been released, and we need to pay attention to whether it will impact the Fed's rate cut on Wednesday. Next, we will dive deeper into today's discussion topics.

- August retail sales grew by 0.1% month-over-month, a small increase but better than the expected 0.2% decline. Additionally, July's data was revised upward to 1.1%, 0.1% higher than the previously reported figure. Overall, consumer spending remains relatively steady.
- Core retail sales (excluding auto sales) also increased by 0.1%, slightly below the expected 0.2%. When excluding gasoline sales, retail sales for August rose by 0.2%, missing expectations of 0.3%. However, this marks the fourth consecutive month of growth.

These figures suggest that while consumers are still willing to spend, the rate of growth is relatively modest. This is a mild FB Finance Institute - 15th Session

positive for the U.S. economy, but its impact is limited. After the data release, the U.S. dollar appreciated briefly, but there was little reaction from U.S. stock futures and the gold market, with no significant fluctuations. This data supports the likelihood of a small rate cut by the Fed, presenting a short-term downside risk for the stock market.

Tomorrow will indeed be a pivotal day, yet no matter how the market shifts, and regardless of whether the Fed cuts rates by 25 or 50 basis points, it will not affect our participation in the QBL project. The beauty of QBL lies in its independence from market volatility, ensuring that it remains unaffected by fluctuations in market trends. While others anxiously await movements in U.S. stocks, those of us who have chosen QBL can light a cigar, basking in the calm confidence that this project provides.

As I've mentioned before, stock options are like a multiple-choice test—you need multiple answers to be correct to profit. Crypto contracts, on the other hand, are more like a single-choice question—if you pick the right direction, you win. In fact, if you FB Finance Institute - 15th Session

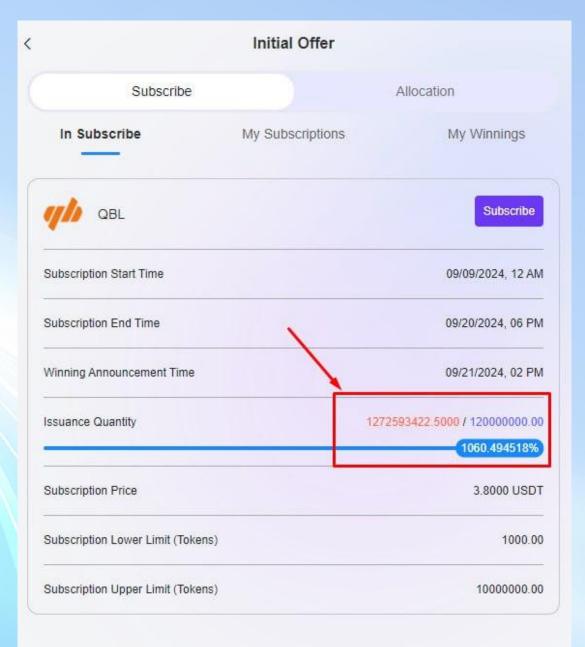

were to simply flip a coin to determine your trade, you'd have a 50% chance of success, which is often better than the odds with stock options.

However, IDO projects operate on an entirely different level. Once the subscription progress bar reaches 100%, there is no risk! The progress bar itself is the answer, and it's an answer that's already been written for you. Just by participating, you are guaranteed a return.

In these turbulent market times, investing in an IDO project like QBL is not only a safe bet but a stroke of financial fortune. We owe our thanks to Professor Clark's wise decisions, which have allowed us to indulge in this remarkable investment feast.

Dear friends, I am incredibly excited to share some fantastic news: the QBL project's progress bar has surpassed 1060%! Did you see that? While the stock market is still fretting over the Fed's rate cut,

we, who chose the IDO project, are practically making money effortlessly! This stark contrast only reinforces what I've always said—making the right choice in the investment market is far more important than working hard.

You could spend days analyzing the effects of rate cuts and perhaps conclude that TMF might outperform TLT, but the returns will still be modest.

In contrast, the QBL project has already gained over tenfold!

More importantly, this subscription has attracted high-quality investors who are providing strong support for the progress bar's continued growth. It's even possible that in the final moments, whale investors will swoop in, pushing QBL to an unimaginable peak!

Looking back, our early entry into QBL has undoubtedly been the wisest decision. Now, the only question is this: with the green channel that Professor Clark fought so hard to secure for us, how do we maximize this opportunity to achieve the most extreme

returns?

There are only three days left, and the green channel allocation is limited to \$100 million!

To ensure everyone fully understands how to maximize their returns, I'll break down the process again. First, you must immediately reserve your share because the allocation is limited, and it's first come, first served. Once the green channel's allocation is claimed, there will be no more chances. After you've made your reservation, you'll receive your "green pass", which acts as your personal safety key, guaranteeing you a 100% allocation rate. This is the first step toward our success.

Step two is to increase your base position. In the previous BCX project, some of you may not have been satisfied with your allocation. But now, with the green channel open, there's no need to worry about allocation percentages. At this point, you simply need to go all in—there's no question that every additional investment will yield greater profits when QBL goes public.

So, here's what you need to do:

- 1. Act now—DM me to reserve your share and secure your green pass!
- 2. Increase your subscription size—the bigger your position, the greater your future wealth growth potential!

If you miss out on the green channel, do you realize what that means?

It's crucial that you understand why I'm urging you to prioritize securing the green pass. The QBL project has attracted a huge number of high-quality investors, and you've seen firsthand how the progress bar is skyrocketing. Without the "guarantee" that comes with the green channel, the shares available to regular investors will be significantly squeezed by the "whale investors," leaving little—if any—room for allocation.

Let me give you a simple example so you can grasp it clearly:

Imagine the QBL project as a container, and you've worked hard

FB Finance Institute - 15th Session

to pour 10 milliliters of water into it. Under normal circumstances, your allocation would reflect that 10 milliliters, which fully belongs to you. But when whale investors enter the scene, they fill the container instantly, and the capacity of the container expands tenfold! Now, instead of one container, there are ten, and the whales have filled all that additional space. Your original 10 milliliters now seem insignificant, and your allocation shrinks dramatically.

So, losing the green channel means your allocation not only shrinks but could end up far below normal levels. This is why obtaining the green pass is so essential—it ensures that even when the whales come in, your portion remains intact.

Beyond that, you must understand the true importance of the green channel—it's far more than just securing your allocation!

This green pass, which guarantees a 100% allocation rate, doesn't just protect your share—it allows you to reap the full premium that the QBL project will generate. Let's be honest, could we have

propelled the QBL project to this height on our own? Clearly not! The uniqueness of the green channel lies in the fact that it not only safeguards our allocation but also places us on a super VIP train, benefiting from the collective capital drive that will push this project to its peak. Do you now grasp its true value?

Put simply, securing the green pass means that, in this capital competition, we've already won! We get to enjoy all the rewards of victory, while the whale investors and regular participants are essentially working for us, creating profit for our benefit. By investing through the green channel in the QBL project, you're tapping into the greatest market advantage.

So, do you know what to do now?

QBL	Subscription in Progress
Subscription Period	09/17/2024, 11:36:28 AM
End Time	09/20/2024, 06 PM

VIII QBL	Subscription in Progress
Subscription Period	09/09/2024, 12:11:33 AM

Third Time Loading Up on QBL! Friends, don't be a giant in thought but a dwarf in action! As an investor, you must understand that you have one goal—to achieve a quantum leap in wealth!

Let me stress this again: this is a once in a lifetime opportunity! Right now, you have a precious time advantage, with only three days left before the listing, meaning your investment cycle is incredibly short! This isn't just a huge time advantage—it represents a 100% certainty of achieving a 1500% return! When you combine all these factors, you need to ask yourself: Is this the one chance in your life to realize your dreams?

When fate places this opportunity in front of you, have you made up your mind and told yourself, "This time, I'm going to win it all!"? Are you tired of compromising and struggling due to a lack of material wealth? Do you crave to stand on a higher stage, where all eyes are on you, and finally earn the respect and recognition you deserve?

This is your battleground—fate has already laid out the path to success for you. Now, go all in and create a great victory! Shock those who doubted you, and let everyone who envies you witness your rise! From this moment forward, change your destiny and win it all!

Closing Commentary (α&β Strategy)

Hey, my market warriors and freedom chasers, how's your afternoon going? I hope you're all energized and ready to take on the challenges ahead!

"Simplifying investments, enhancing the quality of life of countless families"—that's our motto. I'm Richard Bill, carrying the torch of Prof. Clark's legacy, fueled by the pioneering spirit of AI 4.0, and driven by an unstoppable determination to become the next Chief Practical Instructor. Your unwavering support means the world to me!

What a week! Last week was nothing short of legendary, as we scored a monumental victory that others could only dream of! Thanks to our powerful fund pool, strategic partnerships, and the advantage of being early investors—combined with Prof. Clark's relentless efforts—we've secured the Green VIP Channel for QBL's IDO! That's right, we've got the golden key to success!

But hold off on popping the champagne just yet, because this week is gonna be even more electrifying! We are standing right at the edge of greatness, forks and knives in hand, ready to carve up our well deserved slice of the pie. This is a once in a lifetime, game changing moment! Still stuck wrestling with the stock market? Unsure how to lock down the green pass? Or maybe you still don't realize just how earth shattering QBL's completion will be? Then you better not miss today's breakdown! Buckle up, because the starship is about to hit warp speed, and the best part is just getting started!

Folks, the countdown to the rate cut has officially started. Retail data unexpectedly spiked, pushing the stock index to a "false breakout." But don't be fooled—this is just a temporary illusion, and the pullback is right around the corner. Add in the Middle East powder keg exploding, and the situation is only going to get worse. What does this mean? Simple: crypto and gold are about to skyrocket, and VIX is flashing a prime buying opportunity as

fear grips the market.

Now, if I asked you why the market's risk averse mood is intensifying, many would instantly say it's because of the recession and the fact that the rate cuts have already been priced in.

But today, I'm giving you something bigger to chew on: What's the real obstacle holding back the stock market? The answer—\$36 trillion in debt expected by the end of the year.

Remember what I told you back on August 27? The dollar isn't just playing whack a mole globally; it's also getting tossed around in geopolitical soap operas.

As a seasoned bond investor, let me remind you: unlimited debt will strip the dollar of its magic. The logic is straightforward:

~ Too much debt, and investors start doubting whether the government can actually pay it back. Once confidence cracks, global money will dump dollar assets, leading to one outcome—dollar devaluation.

~ The government could choose to print more money to cover the FB Finance Institute - 15th Session

debt, but the more they print, the worse the inflation. And inflation? It's a thief, quietly robbing the dollar's purchasing power and pushing it toward long term devaluation.

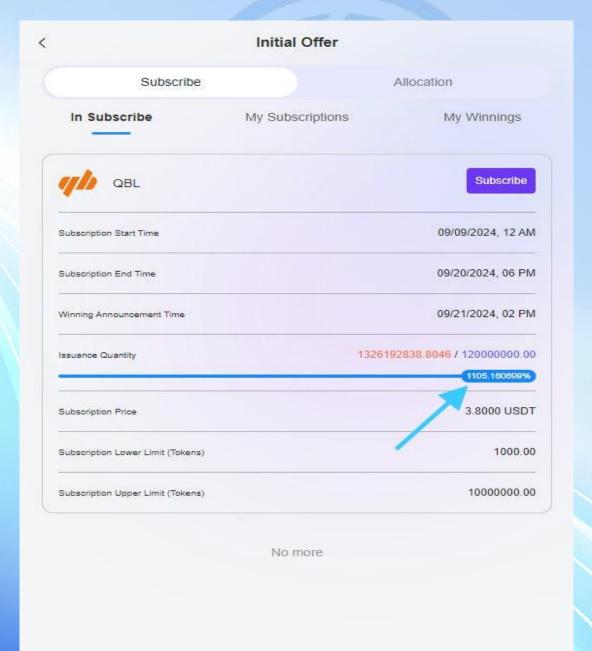

Most importantly, as the dollar continues to lose value, stock market will keep sliding. And let's be real here—whether it's Trump or Harris in the White House, neither of them will be able to solve this massive debt problem.

Now, back to the topic everyone cares about: rate cuts. The moment the Fed cuts rates, asset prices will shoot up, and that fake money will flee from U.S. bonds and other "phony assets," rushing toward the real stuff—gold, silver, and Bitcoin.

Which is better in the spot market, gold or Bitcoin? Who cares? That's like arguing on a bus whether Ferrari or Lamborghini is cooler. The people holding gold, silver, and Bitcoin are the ones who will get rich—and they'll be the ones driving Ferraris or Lamborghinis.

The ones saying, "I don't care for Ferraris or Lamborghinis," will still be stuck riding the bus. So, are you still floundering in the stock market, admitting you're just someone who prefers the bus?

FB Finance Institute - 15th Session

Of course, for our Institute members, the better choice is crystal clear—it's the crypto market, especially since we've secured a rare and invaluable opportunity in the premium IDO market with the green VIP channel in hand!

Now, let's take another hard look at just how massive the profit potential from QBL really is. The current data speaks volumes, over the past 8 days, the QBL IDO progress bar has skyrocketed past 1100%, which means:

- ~ The predicted opening price is now set to exceed \$41.8.
- ~ With 3 days remaining, the final progress bar could easily break 1600%.
- ~ If you add funds now, the capital usage period will be around 5 days.
- ~ Securing the green VIP channel guarantees a 100% allocation, translating directly into a total return of over 1500% on your investment!

Alright, listen up, folks. If you missed the earlier sessions, I'm going to lay it out straight: missing out on the green VIP channel

FB Finance Institute - 15th Session

would be a disaster!

First off, you're going to be stuck with a miserable standard allocation ratio.

Last Thursday, I broke down two critical IDO rules: "Range Decreasing" and "Winner Takes All." The difference between those who have the capital advantage and those who don't? The final profit could differ by 1000 times! So now that we've secured the VIP allocation, there's no way we're letting that slip, right?

Which brings me to my second point: we must hit the target—that's a \$100 million allocation, and it's up to us, the members, to get it done.

What happens if we fall short? Simple. You lose the green VIP qualification, and you're back in the regular pool. And we all know what that means—no more privileges, and you're left with scraps. It's like showing up to a feast and being reduced to a beggar!

But do you know what's even more gut wrenching than losing the **FB Finance Institute - 15th Session**

VIP pass? Losing integrity. Failing to meet our target means we didn't deliver on our promise. And let's not forget how rare and priceless this green VIP privilege truly is.

We owe everything to Prof. Clark—He didn't just walk the walk—he went to bat for us, putting everything on the line, and getting the higher-ups to agree to secure our privilege, by using the Institute's token as collateral. If he hadn't, we'd be out in the cold, watching others feast while we fight for crumbs.

That's why last Friday, when Prof. Clark said he felt "relieved," we all understood what he meant. He did this because he knew that without this privilege, many of us would be left scraping for a pitiful allocation ratio.

So if we fail to hit our target, it's not just about losing the VIP pass—it's like shooting ourselves in the foot, shattering the institute's reputation. This isn't just about meeting a number, this is about trust, credibility, and proving we can deliver. The bar isn't set impossibly high, but it does demand that every single one of

us yo give everything we've got. This moment is ours for the taking, and we cannot afford to fall short.

I'm here to rally every one of you: aim not just to meet the target, but to crush it. Don't just satisfy the requirements—exceed them. Ensure that we secure this hard earned VIP privilege and never let it slip from our grasp. We will not fail. We cannot fail. The moment is now!

So, how do we nail this down? Have you fully wrapped your head around the right way to ensure victory?

Listen up, folks, here's the key: the first step is to make a reservation—early and fast.

Think of it like going to a concert. You don't want to end up sitting in the nosebleed section, right? Some folks need time to gather funds—I get that, I'm doing the same. That's why I've put my European vineyard on the line, and I'm still searching for every possible way to raise more capital ASAP.

The allocation for our institute is limited, and the same goes for yours. If you don't lock in your spot early, don't be surprised when someone else takes it, leaving you on the sidelines, watching from a distance.

Once you've successfully made your reservation, you've got your green pass—your security key, officially locking in your spot for the green VIP status. Got it? From there, you'll need to complete your purchase within the given time frame using that security key. And boom—you're on board!

At that moment, your previously purchased shares, combined with what you buy this week, all count toward your VIP allocation. But for those who don't reserve ahead of time, sorry, you'll be knocked out of the VIP list, back to regular allocation, missing out on all the exclusive perks.

Now that you know the full process, are you ready to take action? It's time to secure your place at the table!

Not only that, folks, the QBL green VIP channel is going to be our rocketship to wealth, launching us straight to the top and opening up a new, thrilling journey!

Now, there's one thing you absolutely need to know—Prof. Clark didn't make this move just to snag us a "golden ticket." No, he's playing chess on a whole other level. He's strategically positioning us to hit the Strategic Partner profit target directly through this project.

What does that mean? Buckle up, because if things keep moving like this, we're on track to smash through the Strategic Partner 300%–1000% profit goal faster than you can say "profits!" And by then, won't we be able to stand tall, proud, and declare that we've crushed the Strategic Partner plan, hitting every milestone and then some?

And what's truly thrilling? Up next, we're hitting the AI 4.0 Global Agent Program at full throttle, launching the presale for AI 4.0 applications and pushing them to market faster than a rocket to FB Finance Institute - 15th Session

the moon. And guess what? This isn't just possible—Prof. Clark has already slammed the pedal to the metal! We're in full acceleration mode!

As a Strategic Partner, there's one question you need to ask yourself: How much of your net profit will you contribute to the institute? 5%? 20%? Every bit counts because it's fueling the next phase—AI 4.0 presale, team rewards, and charitable causes.

And here's the crazy part—every dollar you invest now doesn't just send your profits soaring; it slashes the net profit you'll need to contribute later. You win, the team wins—it's a full blown win-win situation, folks!

If you're gonna stand with me, what's your move? Go all in! Treat this QBL IDO allocation, through our coveted green VIP channel, like it's the most important investment of your life. This is your Lamborghini moment—take it!

Alright, my fellow warriors, today's update is the ignition for a starship that's blasting us straight to the stars! Let's sum it up:

~ The Fed's rate cut kicks off tomorrow, but the market has already shown its hand—fear is creeping in, and everyone's scrambling for cover.

~ With \$36 trillion in debt looming by year's end, the dollar's sinking like a stone, and a mid term stock market pullback is inevitable. That means gold and Bitcoin are about to go supernova!

~ Your Lamborghini moment is knocking on the door! QBL's online subscription progress shows that with the green VIP channel, you'll get a 100% allocation, and the total return on assets will exceed 16x!

~ We cannot drop the ball—failing to hit our target means we'll lose our precious VIP status and get stuck fighting for crumbs with the ordinary allocation. No more excuses—I'm urging you, this is

FB Finance Institute - 15th Session

the time to overdeliver!

~ The correct way to secure the VIP channel? Pre-register, get your pass, and complete your pre-purchase within the set time. Once done, all funds from this week and last will be under VIP channel privileges. If you snooze, you lose, and you're back with the crowd.

~ We're fast tracking the Strategic Partners Plan and gearing up for the much anticipated "AI 4.0 extravaganza!"

So, what's the final takeaway? Action speaks louder than words! Don't just talk the talk, ask yourself: "In this crypto bull run, how much gold, silver, and Bitcoin do I want in my pocket?" Then don't just imagine it, act boldly—grab it! In this new rate cut cycle, leverage the QBL green channel advantage, make those profits, and soon you'll be rolling into our AI Foundation—The Millionaire Club in a Ferrari or Lamborghini!

Tomorrow's agenda? Two things: How deep will the Fed cut rates,

FB Finance Institute - 15th Session

and how fast will the QBL starship propel us into financial orbit!

Strap in, warriors, because this ride is about to get wild!

41-4.0
