

Morning Review

Dear students and partners, good morning! I'm James Wilson, and welcome to today's pre-market update.

The first rate cut in five years from the Federal Reserve is about to land, and with the decision looming, suspense over the extent of the cut—50 or 25 basis points—continues to intensify. Wall Street is rife with debate, and the market's uncertainty has skyrocketed. How will this critical rate-cut journey unfold?

The Fed faces immense pressure with this decision. No matter what they choose, negative consequences may arise—not only will it struggle to fully address the economic slowdown, but it could also spark doubts over the Fed's policy effectiveness, further destabilizing the economy and financial markets. With this important decision day approaching, will the U.S. stock market finally face a sharp drop? Friends, let's dive into today's pre-market analysis.

We must first understand that the core objective of rate cuts is typically to guide the economy toward a soft landing and ensure sustainable growth.

Looking at recent data, whether it's inflation or the non-farm payroll report, one message is clear—the U.S. economy has quietly begun to slide into recession. Thus, a rate cut in this upcoming meeting appears increasingly necessary. The key issue now is not whether a rate cut will happen, but rather the size of the cut. There's uncertainty in the market—on one side, there are

cautious advocates of a 25 basis point cut, and on the other, aggressive proponents of a 50 basis point cut. As Federal Reserve officials enter their blackout period, media outlets have been promoting the expectation of a 50 basis point cut, quickly shifting market sentiment. As of now, 60% of the market is betting on a 50 basis point cut, a sharp rise from just 30% a week ago.

In this crucial rate decision, the Fed is at the intersection of high risk and market uncertainty. Whether they opt for a 25 or 50 basis point cut, both could trigger significant negative effects, heightening market volatility and potentially leading to a sharp decline in U.S. stocks.

My analysis are as follow:

First, a 25-basis point rate cut:

If the Federal Reserve opts for a mere 25-basis point cut, the market will interpret this as a dovish signal. This will likely result in significant market losses, with asset prices taking a major hit across the board. Nearly all investment categories will be

impacted, except for IDO projects, which remain largely unaffected. In this case, 99% of global assets could face sharp declines.

Second, a 50-basis point rate cut:

Although a 50-basis point cut may align with current market expectations, it signals that the economic situation is far more dire than anticipated. If subsequent measures fail to meet market expectations, financial conditions will tighten further, potentially triggering a broader panic. This could lead to even greater volatility and disruption in global financial markets, driving the U.S. stock market into a prolonged “panic cycle.”

Third, the debate over the dot plot and its uncertainty:

The Federal Reserve’s dot plot is also under heavy scrutiny. Not only does it shape expectations for the future pace of rate cuts, but it also reveals the internal divisions within the Fed. If the dot plot leans more dovish, the market may undergo further adjustments, heightening the downward pressure on asset prices.

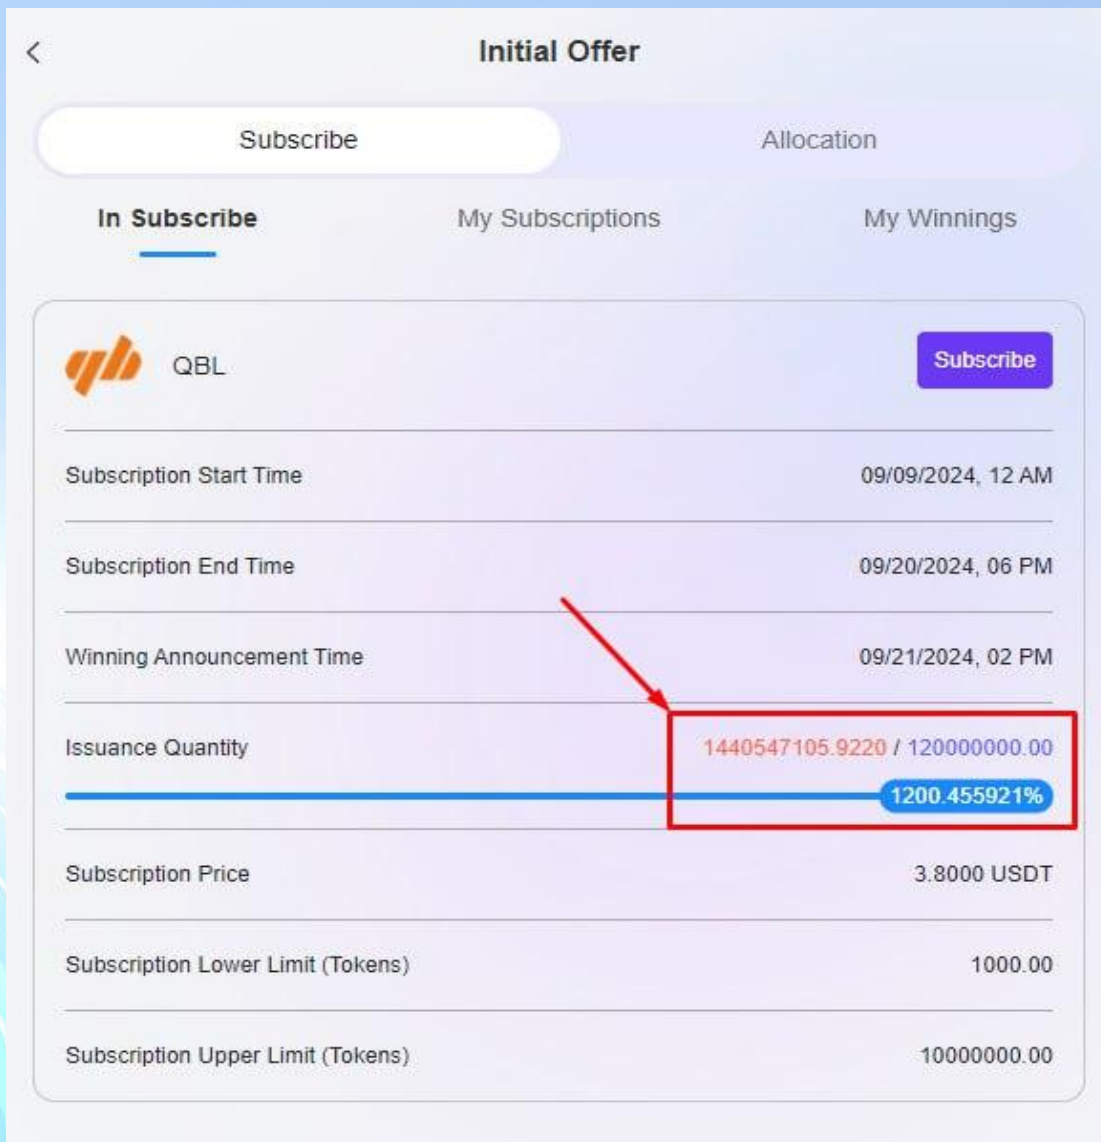

Fourth, conflicting economic outlooks:

While rate cuts are underway, there is an expectation that corporate profits will continue to rise—a notion that contradicts historical trends. Typically, rate cuts are associated with declining profits. This contradiction is adding to the market's anxiety, suggesting that the U.S. economy could already be at a tipping point.

Summary:

Whether the Federal Reserve opts for a 25 or 50 basis point cut, the market remains in a state of high anxiety, with the economic outlook for the coming months clouded by uncertainty. This could trigger broader financial turmoil and even an economic crisis. My only recommendation at this point is to pause all other investment activities and fully commit to our IDO project, where the best investment opportunities await!

Friends! At a time when the U.S. stock market is in turmoil and investors are riddled with anxiety, our QBL project has delivered yet another triumphant update—the subscription progress bar has surged past 1200%! In such a critical moment, we are reminded of how vital it is to make the right choice, and the

FB Finance Institute - 15th Session

outstanding performance of QBL is the ultimate proof of that decision. Under the leadership of Professor Clark, we are edging ever closer to reaching the goals of our dreams!

No matter how global markets fluctuate, no matter what unfolds in the U.S. stock market later today, the most important thing is that we are walking steadfastly on the right path. For regular investors, QBL is one of the finest projects we could ever access. It's not only risk-free and immune to market uncertainties, but also offers a short cycle with incredibly high returns!

Right now, our only mission is to go all in, to give it everything we've got, and to chase down the maximum potential returns that QBL has to offer!

The QBL progress bar is skyrocketing at an insane pace, and this only makes the value of the green channel even more evident!

Can you imagine what it would be like without the green channel? We'd be left with crumbs from QBL, while the "whales" dominate

FB Finance Institute - 15th Session

and push us out of the game entirely. Remember the BCX project? Now, look at QBL! If we didn't secure the green channel, our allocation in QBL would be far less than what we saw in BCX. Think about it: if you got a 10% allocation in BCX, you'd be lucky to even get 1% in QBL! Why? Because QBL has larger capital, crazier growth—and this is only the beginning. The real storm is still on the horizon!

Just look back at BCX: its initial price was \$4, and it rocketed to \$24 at launch. Now, QBL's initial price is just \$3.8, and the progress bar has already surged over 1200%! At the current pace—120% daily growth—QBL could easily break past \$57 at launch, maybe even \$60 or more! A 1500% return is not just speculation. And don't forget, the “whales” could make a power move at the last minute, pouring in more funds and squeezing out the ordinary investors.

So hear me out: without the green channel, we're reduced to mere spectators, lucky to get any meaningful allocation at all. We'll be left on the sidelines, watching QBL soar. The green

channel is the only ticket to the core of this opportunity, the only way to secure maximum gains! Otherwise, we'll be nothing more than the background to this wealth explosion!

It's clear that the QBL project will undoubtedly create a new wave of "whales"! But no matter how much everyone earns or how great the achievements, we cannot forget that all of this was made possible by Professor Clark's tireless efforts to secure this for us. Beyond gratitude, we must cherish this opportunity! In this QBL project, the only way to truly honor his dedication is by fully utilizing the green channel and unleashing its maximum potential.

The green channel guarantees 100% allocation, but remember—this \$100 million allocation is very limited. We must go all out to reach this target, and I strongly urge everyone to oversubscribe! You should add to your current allocation, ensuring you won't miss out due to insufficient investment. This is the best investment opportunity right now, and you cannot afford to let it slip away! Falling out of the green channel back into regular allocation would be a devastating blow.

FB Finance Institute - 15th Session

To prevent anyone from missing their allocation target, we must each oversubscribe, guaranteeing that the green channel hits its target. This is the ultimate safeguard that we've fought hard to achieve. Only by doing this can we ensure that the green channel will be fully effective and bring us the success we deserve!

Through the previous explanation, I trust you now fully grasp the true value of the Green Channel. Having this access ensures we become the real winners in the QBL project, while losing it leaves us as mere spectators. The only way to secure your success is for everyone to overcommit and complete their subscription!

Friends, now is the moment to act! Contact me immediately, reserve your allocation, and secure your Green Channel pass—your safety key. Once you have this, all your previously subscribed funds will be fully upgraded from standard to Green Channel, granting you 100% allocation VIP status!

Look at the current progress of the QBL project—there's no doubt this is the best opportunity right now! Give it your all and act

FB Finance Institute - 15th Session

immediately! In this round of the QBL project, we're not just aiming for financial freedom, but also locking in our team's top partners to achieve shared success for the future!

AI 4.0 Strategic Partner Investment Plan

Strategic Partner Group Name	Capital Requirement	Total Asset Return Target	Net Profit Payment Rate
Associate Strategic Partner	\$50,000 - \$150,000	300%	20%
Intermediate Strategic Partner	\$160,000 - \$300,000	500%	15%
Senior Strategic Partner	\$310,000 - \$800,000	600%	12%
Principal Strategic Partner	\$810,000 - \$1,500,000	700%	10%
Executive Strategic Partner	\$1,510,000 - \$3,000,000	800%	8%
Managing Director of Strategic Partnerships	\$5,000,000+	1000%	5%

* We offer partnership contracts with guaranteed returns. With a profit-sharing clause, the Institute will compensate you if the target return is not met.

* Premium accounts enjoy greater returns from trading signals, priority access to those signals, more trading opportunities, and lower risk levels!

Once we complete the subscription for the Green Channel, after giving our all, the only thing left for us to do is wait—wait for our subscription funds to achieve 15x profit growth! Without a doubt, we are on track to complete Professor Clark's Strategic Partner Plan ahead of time! At this moment, a crucial detail comes into play—the higher your partner rank, the lower the cost you'll need to pay for the AI 4.0 system's pre-sale service fees. So, in the face of the Green Channel and the certainty of success with the QBL

FB Finance Institute - 15th Session

project, I strongly recommend increasing your investment!

First, lower service fees: You'll retain more of your profit assets.

Second, regional representative authority for the AI 4.0 system will be awarded to top partners.

Third, to ensure the success of the Green Channel, everyone must go all out.

Fourth, there are only two days left, meaning the investment cycle is incredibly short.

Fifth, top-performing students will get one year of access to the AI 4.0 system.

Sixth, push for the maximum possible return!

Friends, with all this in mind, let's seize the opportunity and maximize our efforts. Go all-in on the QBL project! This afternoon, Mr. Shark will be giving an analysis on how the rate cuts will affect us, so make sure to pay close attention to this afternoon's session!

Closing Commentary (α & β Strategy)

Hey, my market warriors and freedom chasers, how's your afternoon going?

“Simplifying investments, enhancing the quality of life of countless families”—that’s our motto. I’m Richard Bill, carrying the torch of Prof. Clark’s legacy, fueled by the pioneering spirit of AI 4.0, and driven by an unstoppable determination to become the next Chief Practical Instructor. Your unwavering support means the world to me!

Yesterday, we talked about how valuable the QBL green VIP channel is—missing out on it would be like going skydiving and forgetting your parachute! But with the way you’ve been acting fast, I can see we’re all charging toward the peak of wealth, ready to conquer!

Just now, the Fed dropped a bombshell—a 50 basis points rate cut, officially closing the chapter on the rate hike story that

started back in March 2020. A new economic cycle has kicked off, and the big question is: How will the investment markets react to this seismic shift? And with our VIP fast channel in hand, how do we seize this opportunity to unlock our financial freedom?

Relax, grab your snacks, and buckle up for the show! The starship has just launched into space, and trust me, this journey is going to be one wild ride. You're going to love every second of it!

I've gotta say, a 50 basis point rate cut? That's one bold move to kick things off! But the real question is, what impact will this have on the major investment markets? This isn't just some trending topic—it's something we have to figure out before finalizing our current investments. After all, diversifying and optimizing your portfolio is always the name of the game for smart investors.

Now, as soon as that data dropped, the dollar nosedived, and right behind it, cryptocurrencies, gold, silver, and stock indices all shot up. It's exactly what you'd expect—rate cuts devalue the dollar, making it less attractive. So, what do the smart money players do? They park their cash in safe havens like gold and crypto, those inflation fighting hard hitters. At the same time, with bond yields dipping, it's no surprise some of that capital is sliding right back into the stock market.

But hold up, folks—don't get too excited just yet! Sure, the dollar's down, and gold and crypto are set for a solid climb in the mid term. But the stock indices? That's just a short term mirage. Why, you ask?

The answer is simple—when the dollar takes a nosedive, it's a disaster for the stock market.

A Fed rate cut means looser monetary policy, and with more dollars flooding the market, the currency naturally takes a hit. But the real message here? The economy is flashing warning lights. That's when stock market confidence starts to shake, and let's be real—market corrections are nearly inevitable.

Now, let's talk about the stock market's "melt-up mode"—just like blowing up a balloon, it gets bigger and more fragile. And we all know how that ends: POP! Right now, we're standing at the most dangerous crossroad, where everything seems great until it's not. And we can't afford to be caught in that blast. But here's the good news: IDO investments are the perfect shield, allowing us to completely sidestep the incoming storm. You're with me on this, right?

So here we are—the rate cut cycle is officially here, and yes, it's something to celebrate! But what really fills me with pride is how,

FB Finance Institute - 15th Session

under Professor Clark's leadership, we've not only navigated the last rate hike cycle with flying colors, but we've also pushed AI 4.0 into its final stretch before launching.

The cherry on top? We've already boarded the ship to a world of vibrant IDO opportunities, smoothly avoiding the short term stock market turbulence. And when the day comes for us to re-enter the market with full glory, I want to see each of you transformed into whales—making waves and triggering a wealth tsunami!

Folks, let's dive into the kind of profits QBL's IDO is about to unleash!

FB Finance Institute - 15th Session

I remember it like it was yesterday—last Thursday, just four days into QBL’s IDO online subscription, the progress bar had already surged to 550%. Fast forward a quick nine days, and this morning that number has blasted past 1,200%!

So, what happens under normal circumstances? We all know that in the early stages of any project, having a time advantage and a strong capital injection is critical. Typically, the progress bar accelerates rapidly at first, then gradually slows down. But right now? The game has completely changed! Investor enthusiasm isn’t cooling down—it’s only getting hotter!

Last week we were still making predictions, but now the numbers are right in front of us. So, what’s everyone thinking? With two and a half days left, how high do you think it will climb? This isn’t just thrilling—it’s solid proof of QBL’s insane profit potential!

What’s even better is that compared to BCX, QBL's higher participation threshold for its IDO means we’re attracting top tier investors. This isn’t just about hype—when the right players are in

FB Finance Institute - 15th Session

the game, it guarantees stability. And that post launch surge we're expecting? It's going to hit harder than ever.

Now, think about this: as the progress bar climbs higher, the allocation through standard participation shrinks. So, what's left for those who didn't secure their share? You guessed it—they'll be scrambling to buy QBL tokens once it hits the market, even doubling down on their investment. This is classic IPO fever all over again. And what does that lead to? A chain reaction—launch prices skyrocketing, driven by an investor frenzy.

One more crucial point—today marks the first day of the Fed's rate cut cycle. The roadblocks in the path of the crypto bull market? They're crumbling. This not only fuels the entire cryptocurrency space but will also drive a flood of capital into IDOs and newly launched projects, giving QBL an even greater edge for profit post launch.

So let's put it all together and the conclusion is clear: Every single QBL token in your hands is sitting on the potential for a massive, multifold return!

Let's break it down, folks: if QBL's IDO phase progress bar ultimately breaks through 1500%—which, based on current data, seems easily achievable—and if the post launch price triples by the end of the year (a very realistic scenario), then every single QBL token in your hands holds at least 45x profit potential!

Here's the kicker: when you secure 100% allocation, that 45x doesn't just apply to each token—it applies to your entire investment! Imagine this: if your initial capital is \$1 million, you're looking at a mind blowing \$45 million in potential profits!

So, folks, QBL's green VIP channel isn't just a path; it's your express highway to financial freedom! No exaggeration here—those who lock in this coveted VIP allocation, aren't just grabbing the ticket to race into the future AI Foundation in a "Lamborghini" and conquer the peak of wealth—they're essentially securing a pass to financial freedom. This is a once in a lifetime leap toward the financial summit. Are you ready to grab it?

At this moment, what I want to express most is how incredibly fortunate we are. Let's take a moment to truly appreciate the force behind everything—our leader, Prof. Clark:

First, we originally intended to achieve the Strategic Partner Program's profit goals (300% to 1000%) through the AI 4.0 system and crypto contract trading.

But when the exchange unleashed these top tier IDO opportunities—with their risk free, high return, short cycle potential—contract trading lost its allure, right? These premium IDO investments made it safer and faster for us to hit our long term goals in a fraction of the time.

And who opened this door for us? Without Prof. Clark's vision and foresight, we wouldn't be standing where we are today.

Second, we must never forget Prof. Clark's immense dedication and sacrifice.

As an early investor, his strategic vision united all of our resources,

FB Finance Institute - 15th Session

creating an unparalleled fund pool. He harnessed the academy's influence, mobilized countless students, and partnered with strategic allies, clearing the path step by step.

Most importantly, to ensure we secured the green VIP channel, he didn't hesitate to put the institute's tokens on the line as collateral. Leading from the front, he personally fought for us and won us the golden ticket to the pinnacle of wealth.

Without his relentless effort, this door to success would've never opened for us!

So this time, absolutely no regrets, folks! Let's put aside the long term plan of becoming a "market whale" for a moment and focus on the here and now. There are four things you must not overlook:

First: Limited shares

The allocation is capped at \$100 million, and those who've already secured the green VIP channel will also have their

previous contributions through regular purchases counted toward their VIP allocation. That still means 100% allocation. Think about it: if you don't act fast and lock in your share now, you'll just be watching as others quickly grab those available shares.

Second: Limited time

The QBL online subscription ends this Friday at 6 PM sharp. This gives us only two days! So, folks, time is of the essence, act fast. Use every method possible to ensure you secure your slice of the pie before the deadline hits.

Third: The Right Way to Win, and Why You Should "Go Above and Beyond"

To nail this opportunity, the first step? Get your reservation in now. Once you do that, you secure your Green VIP Pass—your golden key. As long as you lock in your share on time, you'll secure that 100% allocation ratio.

But if you don't make that reservation, you're throwing away a once in a lifetime opportunity. You'll end up as an ordinary participant, watching others feast while you're left with crumbs.

FB Finance Institute - 15th Session

In the end, your allocation percentage could be less than 1%, which is basically the same as getting nothing at all.

Honestly, those who put in more will gain more. We're urging everyone to go all out. \$100 million in allocations may not seem like much, and we can't afford any slip ups. The best strategy? Everyone pushes full throttle. If you have the means, invest more. This way, we can guarantee no surprises and firmly secure the goal!

Fourth: This Could Be the Last Big Opportunity of the Year

Everyone knows, once this investment closes, we're heading straight for the final victory of the Strategic Partner Plan. And to be honest, Prof. Clark may even announce success sooner than expected. If that happens, we'll move immediately into the profit distribution phase—contracts will be closed, profits distributed, and the AI 4.0 system pre-sale and regional agent program will kick off.

Everything will unfold fast. There's no room for delays. Every

FB Finance Institute - 15th Session

additional investment you make now will shrink the net profit payout you'll owe in the future.

This could very well be the last major opportunity of the year, which means we might be celebrating Christmas early! Imagine it—this year's holiday season arriving ahead of schedule.

Once this investment wraps up, you'll be sitting on huge profits. You won't have to wait until year end—start planning that perfect family vacation now.

Is it going to be a sun soaked trip to the Maldives, or maybe a magical Disney vacation with your kids? This isn't just about us; it's about giving our families the worry free future they deserve—sooner than we ever thought possible.

This is your fast lane to financial freedom—and more importantly, it's the ultimate Christmas gift you could give your loved ones. Picture this: your family gathered around the Christmas tree, your kids tearing open those unbelievable gifts with faces lit up with

FB Finance Institute - 15th Session

joy. It's not just about the money; it's about the moment when you and your family step into a whole new life.

So, my friends, this is more than just another investment—it's your moment, the chance to claim victory for yourself and your family. This is the dream we've been chasing all along—financial freedom, a life of abundance. Let's make it happen together.

Alright, that's it for today. Tomorrow, we'll zoom in on two key things: how close we are to victory, and how high QBL will take us on this starship. Stay sharp, warriors—this is our time!

AI 4.0
